8. Description of Project:

The San José Evergreen Community College District (SJECCD) proposes to construct and implement the Vision 2030 San José City College Facilities Master Plan (SJCC FMP), which would include renovations throughout the SJCC campus, demolition of aging structures, construction of new structures, and upgrades to existing transportation and circulation facilities.

9. Surrounding Land Uses and Setting:

The SJCC campus is located in an urban setting and is surrounded by a variety of land uses, including commercial uses and Santa Clara Valley Medical Center to the west; a residential neighborhood, senior housing, a San José Fire Department fire station, and a church to the east; a mixed single- and multi-family residential neighborhood to the south; and single-family residential uses to the north across Interstate 280 (I-280).

10. Other public agencies whose approval is required (e.g., permits, financing approval, or participation agreement.):

N/A

11. Have California Native American tribes traditionally and culturally affiliated with the project area requested consultation pursuant to Public Resources Code section 21080.3.1? If so, is there a plan for consultation that includes, for example, the determination of significance of impacts to tribal cultural resources, procedures regarding confidentiality, etc.?

The SJECCD has not received a request for consultation from California Native American Tribes pursuant to Public Resources Code section 21080.3.1. Nevertheless, the SJECCD sent notification letters to the representatives of applicable California Native American Tribes for which the SJECCD and its consultants anticipate may have an interest in commenting on the proposed project. No responses were received from the California Native American Tribes contacted for the proposed project.

Introduction

The SJECCD proposes to implement the SJCC FMP to meet the facilities requirements contained in the 2030 Educational Master Plan (EMP) for the SJCC campus. The proposed project evaluated in this initial study documents the implementation, including construction and operation, of the SJCC FMP.

Project Location

The SJCC campus is located at 2100 Moorpark Avenue in central San José in Santa Clara County. The location of the campus within Santa Clara County and the City of San José is shown on **Figure 1** (Regional Location). The campus is immediately south of Interstate 280 (I-280) and is bounded by Moorpark Avenue to the north; Rexford Way, Mansfield Drive, Kingman Avenue, and Fruitdale Avenue to the south; Laswell Avenue and South Bascom Avenue to the west; and Leigh Avenue to the east. The campus encompasses approximately 61 acres.

Surrounding Uses

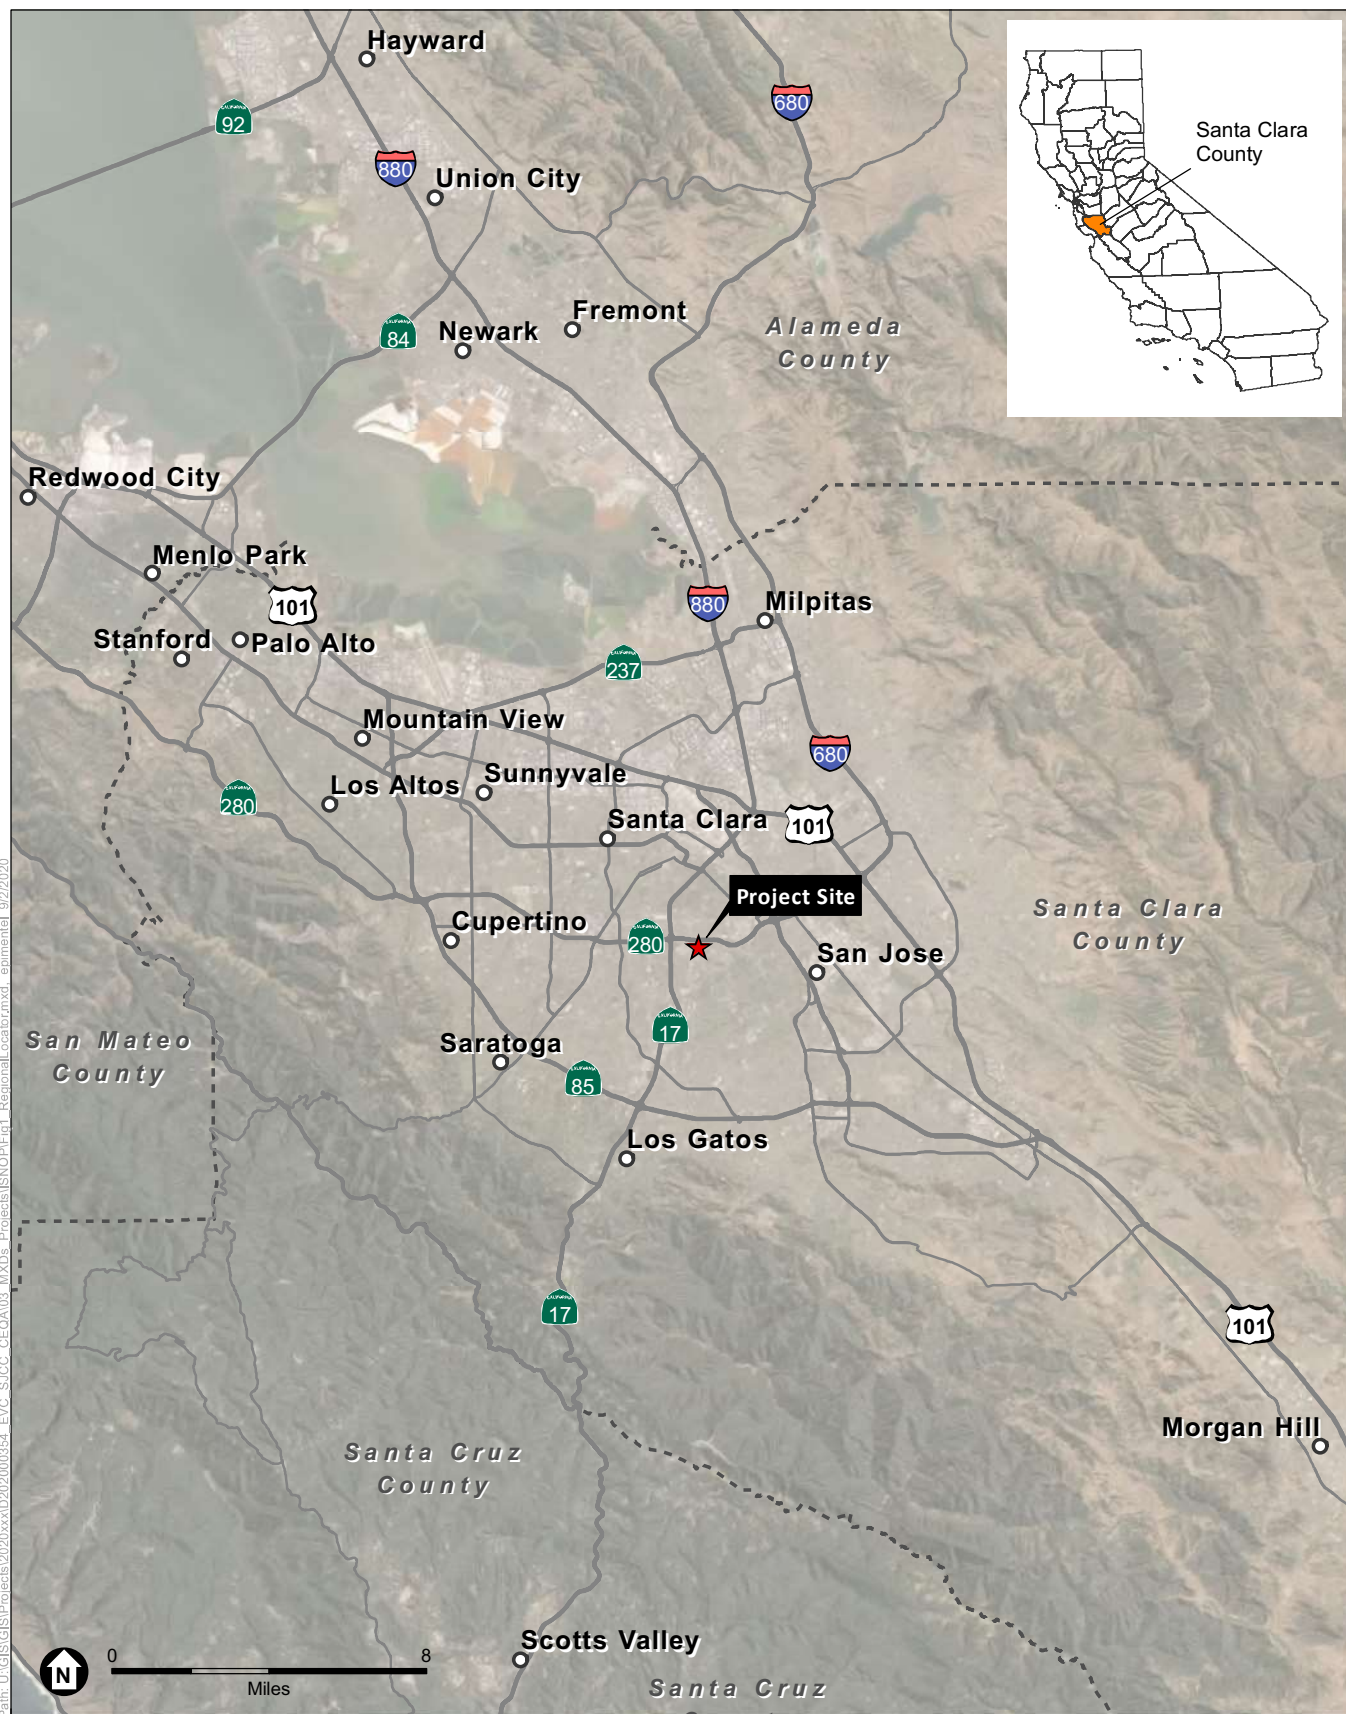

The SJCC campus is located in an urban setting and is surrounded by a variety of land uses, including commercial uses and Santa Clara Valley Medical Center to the west; a residential neighborhood, senior housing, a San José Fire Department (SFFD) fire station, and a church to the east; a mixed single- and multi-family residential neighborhood to the south; and single-family residential uses to the north across I-280. **Figure 2** (SJCC Campus Surrounding Land Uses) depicts the location of land use patterns in the SJCC campus vicinity.

Environmental Setting

Existing Campus Facilities

The SJCC campus was established at its current site in 1953. The initial buildings were constructed in the 1950s, and construction has continued on the campus to the present day. Existing buildings are concentrated mainly in the central, western, and northern portions of the campus. The majority of instructional buildings are on the west half of the campus, and the Library, Student Center, and athletic playfields occupy the east half.

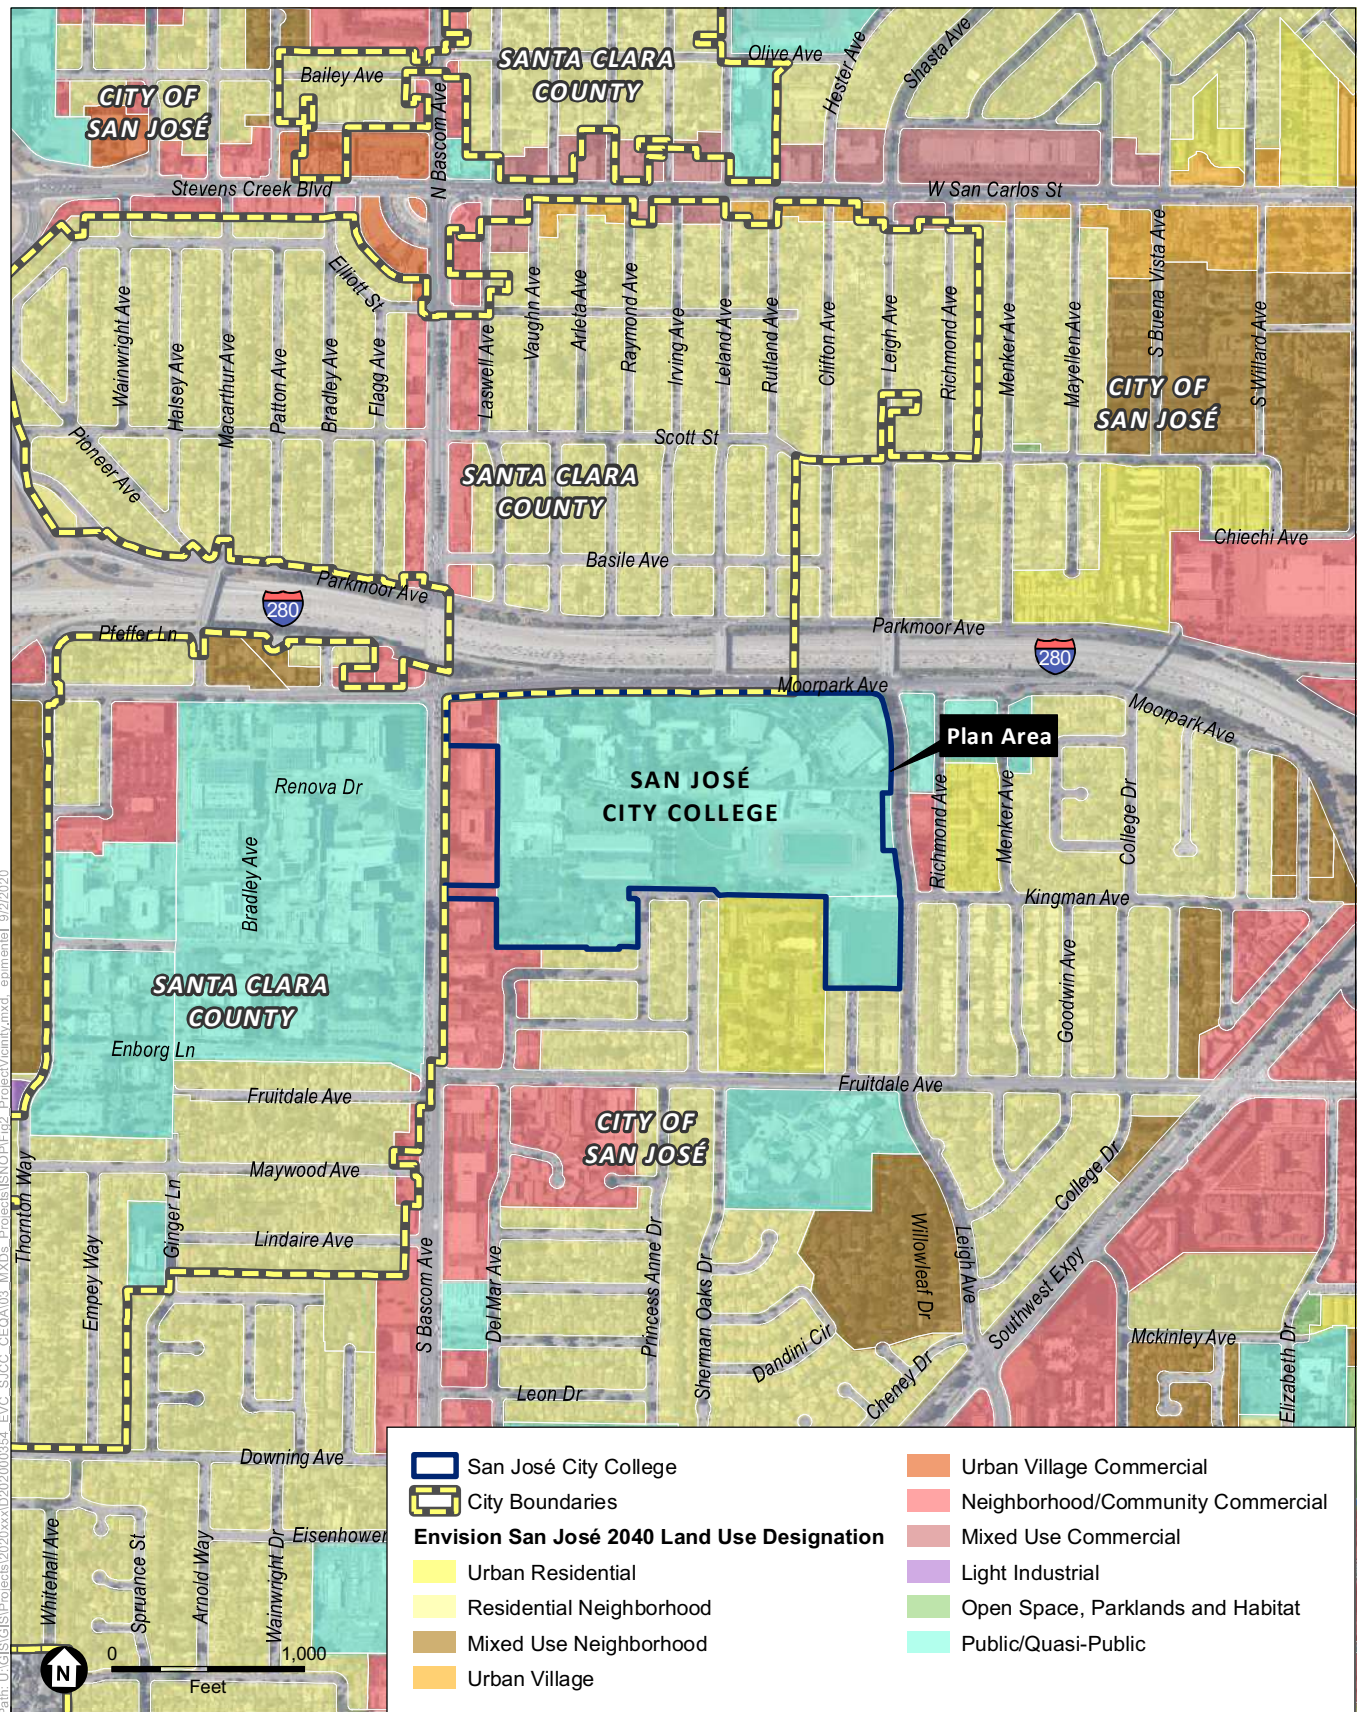

The age and condition of campus facilities varies. The buildings on campus comprise mix of architectural styles, materials, and massing, and generally range from two to five stories. Fourteen of the 19 campus buildings are over 30 years old, and seven of these are approaching or exceed 60 years of age. **Figure 3** (San Jose City College) shows the layout of the SJCC campus, key buildings and facilities, and the age of facilities.

Project Site - San José City College

Existing Vehicular Access, Circulation, Parking

Moorpark Avenue and South Bascom Avenue are major arterials that border the SJCC campus on the north and west, respectively. Leigh Avenue is a local connector. There is an interchange at South Bascom Avenue with I-280, extending west to the San Francisco Peninsula, and east to points in the East Bay.

The main entrance to the campus is from a signalized intersection at Leland Avenue and Moorpark Avenue, with a drop-off at the Cesar Chavez Library/Learning Resource Center (LRC). There are three secondary vehicular access points, one each from Moorpark Avenue (at Laswell Avenue), from South Bascom Avenue (at Kingman Avenue), and from Leigh Avenue. None of these access points are signalized. All three secondary entry points have immediate access to surface or structured parking lots.

Most parking is located on the perimeter of the campus and generally concentrated at the southwest and northeast ends of the campus. A parking structure is located in the northeasterly portion of the campus. There are currently 1,846 parking spaces serving the SJCC campus.

Project Components

Facility improvements contained in the SJCC FMP to meet the future program needs include demolition and removal of certain existing buildings on the campus; the construction of certain new buildings and the renovation of certain existing buildings and facilities; improvements to vehicular and pedestrian access and circulation systems; expansion of parking facilities and capacity; and open space improvements. A portion of these projects have been funded as part of the Measure X Capital Improvement Program. A description of each of these elements is provided below.

Building and Facilities Program

Descriptions of SJCC campus buildings proposed for demolition and removal, proposed new buildings, and buildings renovated and/repurposed are provided below. **Table 1** provides the scope of the building program under the SJCC FMP, including estimated square footage of the facilities to be demolished, constructed, or renovated.

TABLE 1

Source: SJECCD, 2020

Buildings to be Demolished

The SJCC FMP and subsequent revisions identified four buildings for demolition and removal, to eliminate non-functioning space and replace the oldest and most aged facilities with new facilities: the Business Building (B), General Education Buildings (GE), Career Technology Education (CTE) 300 Building, and the former Child Development Center. Demolition of both the CTE 300 Building and the former Child Development Center were the subject of prior District approvals. The former Child Development Center has since been demolished, and the CTE 300 Building is in the process of being demolished as of the release of this Initial Study; accordingly, these activities are excluded from this analysis. The Business and General Education Buildings would be demolished to make way for the development of a new General Education/Business Complex; while the specific timing for demolition of these buildings are not yet defined, their removal are conservatively included within the scope of this analysis.

Proposed New Buildings

Maintenance, Operations, and Reprographics Building

The SJCC FMP proposes construction of a new two-story Maintenance and Operations, and Reprographics (MO) Building at the southwest corner of the campus, on the site of an existing surface parking lot. The proposed facility would provide a consolidated location for the school's maintenance and operations, include space vacated by the demolition of CTE Building 300, and allow for relocation of the existing reprographics facilities from space targeted for expansion of the Cosmetology program (described below). The MO building was the subject of a prior District approval, and its construction is currently under way; consequently, development of the MO Building is excluded from this analysis. The size of the proposed MO Building will be approximately 15,000 gross square feet (GSF).

New Career Technical Education Building

Under the SJCC FMP, the District intends to retain the current CTE 100 and 200 Buildings, but as indicated above, is currently demolishing the CTE 300 Building. The District proposes to construct a new CTE building that would connect to the CTE 200 Building. The new CTE building would be a four-story structure and would include space for shop and lab functions vacated by demolition of CTE Building 300 and for Emergency Medical Technician space relocated from the Technology Center. The estimated square footage of the new CTE building will be 85,000 GSF.

Child Development Center

The SJCC FMP proposes to construct a new Child Development Center (CD) to be located in the eastern portion of the South Parking Lot on the site of the former Child Development Center. The proposed new CD would be built in two phases: Phase 1 would include development of a permanent play yard for up to 100 children, short-term parking, parent access and site improvements, and portable structures to house classrooms and support spaces for up to 75 students. The estimated square footage for Phase 1 is 7,600 GSF. Phase 2 would include the construction of the new CD in the location of temporary parking, east of the play yard. The facility would house classrooms, observation areas, and operations space to support up to 100 children. Once constructed, the

existing portables at this location would be removed, allowing space for parking and site improvements to be made. The estimated square footage for the completed CD would be 15,000 GSF.

General Education/Business Complex

Based on projected growth in the number of classrooms, labs, and offices necessary to serve the SJCC General Education and Business programs, the SJCC FMP proposes construction of a new General Education/Business Complex that would comprise two three to four-story buildings. Demolition and removal of the existing General Education/Business Complex would create space for the development of a quad at the center of campus (described under *Open Space*, below). It would also improve circulation, allow for an expanded drop-off area at the Leland Avenue entry the SJCC campus, and the expansion and improvement of parking facilities with the continuation of the proposed perimeter loop, described below under *Vehicular Access, Circulation, and Parking Improvements*. The estimated combined estimated square footage for the new buildings associated with this complex would be approximately 104,000 GSF.

Aquatics Center

The SJCC FMP proposes a new Aquatics Center that would include a six-lane (minimum) competitive lap pool with a depth to support water polo and other aquatic-based sports. An Adaptive Physical Education (PE) pool with a depth greater than 1.5 meters would be connected to and in support of the competitive pool. The proposed Aquatics Center would also include support facilities, including lockers, showers, restrooms, office space, storage, and a pool equipment facility. The estimated square footage of the Aquatics Center support facilities is 11,000 GSF.

The proposed location of the Aquatics Center would be southwest of the existing Softball Field and east of the CTE 100 Building. However, an alternative location for the Aquatics Center would be east of the Wellness Center.

Renovated and Repurposed Buildings, and other Renovations

Reprographics and Cosmetology

The SJCC FMP includes partial renovation of the Reprographics and Cosmetology Building (RC Building). The SJCC FMP recommends that the reprographics facilities, currently residing in the RC Building be relocated to the proposed new MO Building (described above). The relocation of reprographics facilities to the MO Building would make space available for other uses in the RC Building, including an opportunity to expand the SJCC Cosmetology program and introduce an Independent Esthetician program. A portion of the vacated space in the existing RC Building could also be repurposed to support Adaptive PE needs. The estimated square footage to be remodeled within the RC Building would be 5,643 assignable square feet (ASF), although the overall gross square feet of the RC Building would remain the same.

Technology Center Renovation

The proposed SJCC FMP would include renovation of the Technology Center interior. The SJCC FMP recommends the relocation of the SJCC Emergency Medical Services (EMS) program from the fifth floor of the existing Technology Center to the proposed Career Technical Education Building (described above). The effect of this relocation would allow for the expansion of space in the existing

Technology Center for the SJCC Dental Assistant and Medical Assisting programs. The estimated square footage for portion of the Technology Center building to be remodeled would be approximately 2,207 ASF. The overall square feet of the Technology Center building would not be changed under the proposed SJCC FMP.

Jaguar Student Development and Multi-Cultural Center

The SJCC FMP proposes the former gym at the center of campus be renovated and repurposed as a Student Development and Multi-Cultural Center, with lounge, recreation, and office/meeting space. The estimated square footage for the remodeled facility would be 35,363 GSF.

Theater Arts Building (New Drama Wing and Lobby)

The SJCC FMP recommends renovation of the existing Theater Arts Building to support current instructional needs. The adjacent instructional wing (West Wing) is in poor condition, and would be demolished and replaced with a larger structure serving an expanded instructional program, including new drama and dance labs, a black box theater, lecture hall, and offices. The SJCC FMP also proposes a lobby addition to the east side of the Theater Arts Building to provide a new lobby/entrance point off the proposed central quad described below under *Open Space*. The estimated square footage of the renovated and Theater Arts Building would be 56,033 GSF.

Central Plant Expansion

The SJCC FMP would include expansion of capacity in the Central Plant. In order for the chilled water systems to meet future anticipated load of buildout pursuant to the SJCC FMP, the SJECCD would add up to three 375-ton chillers to the Central Plant. The project also includes enhancement of the heating hot water system for the campus, with additional of one heat recovery chiller to the Central Plant. Other improvements in the Central Plant would include potential installation of earthquake valves and a gas sub meter. The existing Central Plan structure is of sufficient size to accommodate the proposed expansion of capacity, and consequently, no alteration to the building footprint is proposed.

Track and Field Replacement Project

As part of the Track & Field replacement project, SJCC will be widening the existing field to accommodate a full-size soccer pitch. Some track events will be relocated. This modification may require minor adjustments of the existing stadium lighting to ensure full coverage across the widened playing field; however, no new stadium lighting is proposed to be installed. The District would work with stadium lighting professionals as needed and incorporate appropriate design considerations and/or features to ensure any proposed adjustments to existing stadium lighting would not increase light spill or glare at off-site locations.

Vehicular Access, Circulation, and Parking Improvements

Vehicular Access

The SJCC FMP proposes improvement of existing SJCC vehicular access points and the addition of one new vehicular access point. The proposed access improvements and additions are described below.

Leigh Avenue at Moorpark Avenue

The SJCC FMP determined that reconfiguration of the primary entrance to the SJCC campus at Leigh Avenue, the Moorpark Avenue and Leland Avenue intersection, and the Leigh Avenue segment crossing I-280 between Moorpark Avenue and Parkmoor Avenue could improve access to and egress from the campus. Accordingly, the SJCC FMP proposes the reconfiguration of the entrance, roadway, and intersection to provide a three-way signalized intersection that would allow westbound traffic on Parkmoor Avenue to turn left onto Leigh Avenue and move directly into the SJCC campus. The reconfiguration would also allow traffic exiting the campus at this location to cross Moorpark Avenue and continue westbound on Parkmoor Avenue.

Additional Access Improvements

The SJCC FMP proposes that all new and existing vehicular access points to the campus, including the entrance at Laswell Avenue to parking on the north edge of campus, should be designed as vehicular gateways that would include a formalized hierarchy of appropriate signage and a unified identifiable landscape and entrance character.

Perimeter Loop

The SJCC FMP proposes the creation of an internal perimeter loop to improve service access and student vehicular movement between SJCC parking areas. Creation of the perimeter loop would include the following actions.

- Creation of the north segment of the perimeter loop by linking the existing parking lots along Moorpark Avenue.
- Creation of the south and east segments of the perimeter loop by opening and extending Kingman Avenue on campus east to Leigh Avenue, skirting the residential neighborhood to the south by utilizing the existing utility easement south of the SJCC football stadium. The SJCC FMP proposes that this segment include an on-campus link, parallel to Leigh Avenue, through the current parking area east of the football stadium to connect with the current Leigh Avenue entrance to the campus, and provide access to the central plant and surface and structured parking in the north east quadrant of the campus.
- Develop the west segment of the perimeter loop by converting portions of Laswell Avenue to pedestrian, service, and emergency access only. To eliminate pedestrian-vehicular conflict, the SJCC FMP proposes that Laswell Avenue should be blockaded at the Technology Center-Science Complex parking lots north of the primary east-west pedestrian walkway on the campus (referred to as the smile path) and at the limited parking area south of the smile path. The SJCC FMP proposes to improve the Laswell Avenue segment north of Kingman Avenue and south of the smile path to serve, in addition to service and emergency vehicle access, as a north-south pedestrian connection between student parking in the southwest quadrant and the core of the campus.

Student Drop-Offs

The SJCC FMP proposes the following additional and improved pedestrian drop-offs in the SJCC campus.

- New pedestrian drop-offs would be provided at the Laswell Avenue entrance to the SJCC campus north of the Science Complex; and at the east terminus of an improved pedestrian spine south of the Student Center and north of the Athletics/Wellness Center.
- The SJCC FMP also proposes creation of expanded pedestrian drop-off at the Leigh Avenue entrance to the SJCC campus. This drop-off would serve as a pedestrian gateway into campus, as well as drop-off for events in the Theatre and public access to the Library.

As with vehicular entries and pedestrian gateways, the pedestrian drop-offs would include a unified, identifiable landscaped entrance character.

Parking

The SJCC FMP proposes to increase the total number of parking spaces serving the campus from 1,846 parking spaces to 2,531 spaces by 2030. To meet projected parking demand, the SJCC FMP proposes the following parking facility additions and improvements.

- Reconfiguration of the existing south parking lot.
- Reconfiguration and expansion of the north parking lot on the north end of the proposed central quad (described below under *Open Space*). A portion of this lot would be designated for short-term visitor parking to facilitate access to administration and for new students familiarizing themselves with the campus.

Pedestrian Access and Circulation Improvements

Pedestrian access and circulation improvements proposed in the SJCC FMP are described below. The SJCC FMP proposes the creation of a series of north-south pedestrian walkways (or spines) linking student parking at the south edge of campus with the core of the campus and facilities on the north edge of the smile path. The proposed north-south pedestrian circulation improvements include the following.

- As described above under *Perimeter Loop*, develop the west segment of the perimeter loop by converting portions of Laswell Avenue to pedestrian, service, and emergency access only. To eliminate pedestrian-vehicular conflict, the SJCC FMP proposes that Laswell Avenue be blockaded at the Technology Center-Science Complex parking lots north of the pedestrian smile path and at the limited parking area south of the smile path. The SJCC FMP proposes to improve the Laswell Avenue segment north of Kingman Avenue and south of the smile path to serve, in addition to service and emergency vehicle access, as a north-south pedestrian connection between student parking in the southwest quadrant and the core of the campus.
- Creation of a new and improved spine along the western edge of the SJCC athletic fields to provide a connection between the surface and structured parking in the southern portion of the campus to the interior of the campus separate from the service vehicle access and yards required to service the existing and proposed CTE building.

Open Space

The SJCC FMP proposes development of a hierarchy of open spaces, ranging from large, active, formal and informal gathering spaces to smaller, intimate, and purpose-built spaces. Open space features proposed in the SJCC FMP are described below.

Central Quad

The proposed Central Quad is intended to serve as an active space at the heart of the SJCC campus for meeting, dining, study, and socialization. The Central Quad would serve as an exterior extension of activities and spaces housed in the proposed Jaguar Student Development and Multi-Cultural Center (described above under *Building Facilities Program*). Creation of the quad would require demolition and replacement of the General Education/Business Complex (described above under *Building Facilities Program*).

Pedestrian Nodes and Plazas

The SJCC FMP recommends creation of pedestrian nodes or plazas at the intersections of campus walkways and paths. These spaces are intended allow for the placement of campus maps to assist in wayfinding and, together with seating, opportunities for informal meeting and gathering.

Implementation and Phasing Schedule

The program of campus development under the SJCC FMP includes the following development sequence.

TABLE 2
SJCC FACILITIES MASTER PLAN IMPLEMENTATION AND PHASING SCHEDULE

Project	Action	Anticipated Construction Period
Student Center (SC)	Renovation	May 2021 – Aug 2021
Technology Center (T)	Renovation	Feb 2025 – Nov 2025
Reprographics and Cosmetology (RC)	Renovation	Jun 2024 – Dec 2024
CTE 200 Building (200)	Renovation	Jun 2021 – Jun 2023
Central Plant (CP)	Renovation	2021-2022
Career Technology Building (CTE)	New Construction	Jun 2022 – July 2024
Jaguar Student Center and Multicultural Center (JMC)	Renovation	2022 - 2024
Drama & Theater	Expansion	Anticipated after 2025
General Education/Business Complex	Demolition and New Construction	Anticipated after 2025
Aquatic Center	New Construction	Anticipated after 2025
Child Development Center (CD)	New Construction	Anticipated after 2025

Construction Activities

Site preparation for new facilities under the SJCC FMP would include the demolition of existing landscaped and paved areas, which would be cleared from the footprints of proposed new structures. Structures scheduled to be renovated would be subject to partial demolition in areas planned for renovation, which may include full demolition of section of those structures or internal demolition of existing features. Construction of proposed new structures would include site grading, excavation, pouring of foundations, and erection of structures. Pile-driving is not anticipated to be necessary for construction of building foundations.

Project Approvals and Entitlements

SJECCD

Adoption of the proposed project is anticipated to require, but may not be limited to, the following SJECCD actions:

- Certification of the Final EIR for compliance with the requirements of CEQA;
- Adoption of a Mitigation Monitoring and Reporting Plan (MMRP), which specifies the methods for monitoring mitigation measures required to eliminate or reduce the project's significant effects on the environment;
- Adoption of Findings of Fact, and for any impacts determined to be significant and unavoidable, a Statement of Overriding Considerations.

Environmental Factors Potentially Affected

The environmental factors checked below would be potentially affected by this project, involving at least one impact that is a “Potentially Significant Impact” as indicated by the checklist on the following pages.

- | | | |
|---|--|--|
| <input type="checkbox"/> Aesthetics | <input type="checkbox"/> Agriculture and Forestry Resources | <input checked="" type="checkbox"/> Air Quality |
| <input type="checkbox"/> Biological Resources | <input checked="" type="checkbox"/> Cultural Resources | <input checked="" type="checkbox"/> Energy |
| <input type="checkbox"/> Geology/Soils | <input checked="" type="checkbox"/> Greenhouse Gas Emissions | <input type="checkbox"/> Hazards & Hazardous Materials |
| <input type="checkbox"/> Hydrology/Water Quality | <input type="checkbox"/> Land Use/Planning | <input type="checkbox"/> Mineral Resources |
| <input checked="" type="checkbox"/> Noise | <input type="checkbox"/> Population/Housing | <input type="checkbox"/> Public Services |
| <input type="checkbox"/> Recreation | <input checked="" type="checkbox"/> Transportation | <input type="checkbox"/> Tribal Cultural Resources |
| <input checked="" type="checkbox"/> Utilities/Service Systems | <input type="checkbox"/> Wildfire | <input checked="" type="checkbox"/> Mandatory Findings of Significance |

DETERMINATION: (To be completed by the Lead Agency)

On the basis of this initial study:

- ☐ I find that the proposed project COULD NOT have a significant effect on the environment, and a NEGATIVE DECLARATION will be prepared.
- ☐ I find that although the proposed project could have a significant effect on the environment, there will not be a significant effect in this case because revisions in the project have been made by or agreed to by the project proponent. A MITIGATED NEGATIVE DECLARATION will be prepared.
- ☒ I find that the proposed project MAY have a significant effect on the environment, and an ENVIRONMENTAL IMPACT REPORT is required.
- ☐ I find that the proposed project MAY have a “potentially significant impact” or “potentially significant unless mitigated” impact on the environment, but at least one effect 1) has been adequately analyzed in an earlier document pursuant to applicable legal standards, and 2) has been addressed by mitigation measures based on the earlier analysis as described on attached sheets. An ENVIRONMENTAL IMPACT REPORT is required, but it must analyze only the effects that remain to be addressed.
- ☐ I find that although the proposed project could have a significant effect on the environment, because all potentially significant effects (a) have been analyzed adequately in an earlier EIR or NEGATIVE DECLARATION pursuant to applicable standards, and (b) have been avoided or mitigated pursuant to that earlier EIR or NEGATIVE DECLARATION, including revisions or mitigation measures that are imposed upon the proposed project, nothing further is required.

Environmental Setting

The SJCC campus is situated in the Santa Clara Valley approximately 10 miles from the southerly end of San Francisco Bay. The topography of the campus and surrounding area is flat, and there are no natural water bodies, creeks or riparian areas on the campus or in the immediate surrounding area. The campus is located in an urban setting and is surrounded by a variety of developed land uses, including commercial uses and Santa Clara Valley Medical Center to the west; a residential neighborhood, senior housing, a SFFD fire station, and a church to the east; a mixed single- and multi-family residential neighborhood to the south; and single-family residential uses to the north across I-280.

Existing campus buildings are mainly concentrated in the central, western, and northern parts of the campus. Sports facilities, such as the softball field and football and track stadium, are mainly located in the central and eastern portions of the campus. The multi-use athletic field is located in the southeastern portion of the campus, adjacent to Leigh Avenue. Older campus buildings are generally one to two stories high. The Theater building, Library, and Student Center, located in the northern portion of the campus, are the equivalent of three to four stories (30 to 40 feet) high, and the Technology Center at the northwest corner of the campus is five stories high. The existing buildings include a variety of shapes and scales and have been constructed with a variety of materials, including brick, stucco, wood, metal, and glass. The white Theater building and brown parabolic roof of the Men's Gym are visible from many parts of the campus and the surrounding streets.

Vegetation on the campus consists of small landscaped areas outside the campus buildings, turf grass in the sports fields on the east side of the campus, and other landscaping throughout the campus. Ornamental trees are located throughout the campus, including in areas along Kingman Avenue, at the corner of Moorpark Avenue and Leigh Avenue, bordering campus parking lots,

along pedestrian paths, and near a number of campus buildings. Several hundred trees are located on the campus, with the most prevalent tree species being coast redwood. There may be a few coast live oaks that have arisen naturally on campus, however, a majority of the trees on the campus were planted for landscaping and are not indigenous to the site (see Section IV, Biological Resources, for additional detail).

Existing nighttime lighting at SJCC is located throughout the campus for security and wayfinding, including along pedestrian walkways, in parking lots, and outside of the campus buildings. The football field contains spectator lighting, which is lit on game nights. The tennis courts, soccer field, and multi-use athletic field at the southern end of the campus are not lit at night. Most of the outdoor lights on the campus consist of high-pressure sodium vapor lights. Some lights, such as the lights over the football/track field, are metal halide lights.

There are currently no substantial sources of glare on the campus that are visible from the surrounding areas. As discussed above, campus buildings are relatively low scale in height. The buildings do not have extensive areas of highly reflective windows, and most are partially screened by trees and vegetation. Parking areas located in the interior of the campus, along the north and west side of the campus, or indoors are only partially visible from surrounding areas, and the parking lots located on the south and east sides of the campus near adjacent residential areas are largely screened by trees.

Discussion

- a) **No Impact.** A scenic vista is generally defined as an expansive view of highly valued landscape as observable from a publicly accessible vantage point. There are no scenic vistas that include the campus as a major part of the view. In addition, the campus and surrounding area are characterized by flat topography and do not contain any ridgelines or other topographic forms that would be affected by campus development or that provide views of the campus and its surroundings. Ground-level views into the campus from surrounding areas are limited by buildings and trees on the campus, and views of the surrounding areas are also limited by flat topography and extensive urban development. Thus, there are thus no scenic vistas in the campus area. Based on these factors, development proposed under the SJCC FMP would have no impact with regard to this criterion.
- b) **No Impact.** There are no state-designated scenic highways in the vicinity of the campus (Caltrans 2017). Therefore, changes on the campus as a result of implementing the SJCC FMP would not affect visual resources associated with any State-designated or local scenic highway. There would be no impact with regard to this criterion.
- c) **Less than Significant Impact.** Buildout of the proposed project would include the construction of new buildings and the repurposing of existing buildings; improvements to vehicular and pedestrian access and circulation systems; improvements to parking facilities; and open space improvements. As a result, buildout of the proposed project would incrementally alter the existing visual character of the campus.

The SJCC campus qualifies as an “urban area” as defined in CEQA Guidelines section 21094.5 because it is located in an incorporated city. Therefore, the SJCC FMP would have an adverse effect related to scenic quality if it were to conflict with applicable regulations governing scenic quality. The District has land use jurisdiction over programs and projects proposed on the SJCC campus. There are no District regulations governing scenic quality with which development under the SJCC FMP would be in conflict. Furthermore, while the District is not subject to local land use regulations, the development proposed under the SJCC FMP would be generally consistent with City of San Jose land use designations for the campus. As demonstrated further in Section XI, Land Use and Planning, below, the SJCC FMP would not conflict with any local or regional plan, policy, or regulation adopted for the purpose of avoiding or mitigating an environmental effect. Consequently, the effect of the SJCC FMP on scenic quality would be less than significant. For informational purposes, additional discussion is provided immediately below regarding the effects of the SJCC FMP on visual character and quality. The specific designs of most of the new buildings that would be constructed on the campus under the SJCC FMP are not known at this time, and the evaluation of impacts is based mainly on the general building mass, height, and location. The mass and height of the proposed buildings would be similar to existing buildings on the campus. A majority of the new buildings would be constructed within or adjacent to the existing core of the campus, and in some cases would replace existing buildings. As a result, the type and scale of development on the campus at buildout of the proposed SJCC FMP would generally be similar to existing conditions. Proposed new buildings would not be substantially different from the existing buildings and would be designed to coordinate with them in exterior appearance, height, and mass. Views of the campus from both on-campus and off-campus viewpoints with the addition of the proposed new buildings would not be substantially different from existing views.

In addition, the proposed SJCC FMP includes several elements that would improve the visual character of the campus, including the development of a hierarchy of open spaces, ranging from large, active, formal and informal gathering spaces to smaller, intimate, and purpose-built spaces. The proposed SJCC FMP would also include creation of pedestrian nodes or plazas at the intersections of campus walkways and paths, which would have a positive effect on the visual character of the campus.

Based on these factors, the proposed building and facilities program under the proposed project would not substantially degrade the existing visual character or quality of public views of the SJCC campus and its surroundings. Where feasible, existing trees would be preserved on the campus and trees lost to development would be replaced by new trees.

- d) **Less than Significant with Mitigation Incorporated.** The proposed SJCC FMP would shift some light sources and could increase nighttime lighting in portions of the campus, due to the presence of new campus buildings and parking. New light sources would be introduced with development of the proposed Career Technical Education building and the proposed Child Development Center. Any new lighting associated with this proposed development would be expected to be of a similar nature and scale as other existing night

lighting at the campus, and compatible with the surrounding area. However, in the absence of actual lighting plans for these projects at this time, new nighttime lighting could potentially adversely affect residential neighborhoods in the project vicinity, if appropriate design measures were not incorporated. Implementation of **Mitigation Measure AES-1** would require that all new exterior lighting for future projects on the SJCC campus shall incorporate downward-directed lighting or cutoff-type lighting, and/or other design measures as appropriate in order to minimize light spill and nighttime glare and would ensure the impact would be less than significant.

In addition, as discussed in the Project Description, SJCC may also potentially widen the football stadium to accommodate a full-sized soccer field. This modification may require minor adjustments of the existing stadium lighting to ensure full coverage across the widened playing field; however, no new stadium lighting is proposed to be installed. The District proposes to work with stadium lighting professionals as needed, to review any potential adjustments to existing stadium lighting that may be required, and incorporate appropriate recommendations and/or design features to ensure these improvements would not increase light spill or glare at off-site locations. While no significant off-site lighting effects are anticipated with this improvement, the District's proposed approach for lighting review and modifications at the stadium is also conservatively incorporated into Mitigation Measure AES-1.

Mitigation Measures

Mitigation Measure AES-1: Minimize Spillover Light and Nighttime Glare. All new exterior lighting for future projects on the SJCC campus shall incorporate downward-directed lighting or cutoff-type lighting, and/or other design measures as appropriate, in order to minimize light spill and nighttime glare. The District also proposes to work with stadium lighting professionals as needed, to review any potential adjustments to existing stadium lighting that may be required, and incorporate appropriate recommendations and/or design features to ensure these improvements would not increase light spill or glare at off-site locations.

Agriculture and Forestry Resources

<i>Issues (and Supporting Information Sources):</i>	<i>Potentially Significant Impact</i>	<i>Less Than Significant with Mitigation Incorporated</i>	<i>Less Than Significant Impact</i>	<i>No Impact</i>
II. AGRICULTURE AND FORESTRY RESOURCES —				
In determining whether impacts to agricultural resources are significant environmental effects, lead agencies may refer to the California Agricultural Land Evaluation and Site Assessment Model (1997) prepared by the California Dept. of Conservation as an optional model to use in assessing impacts on agriculture and farmland. In determining whether impacts to forest resources, including timberland, are significant environmental effects, lead agencies may refer to information compiled by the California Department of Forestry and Fire Protection regarding the state's inventory of forest land, including the Forest and Range Assessment Project and the Forest Legacy Assessment project; and forest carbon measurement methodology provided in Forest Protocols adopted by the California Air Resources Board. Would the project:				
a) Convert Prime Farmland, Unique Farmland, or Farmland of Statewide Importance (Farmland), as shown on the maps prepared pursuant to the Farmland Mapping and Monitoring Program of the California Resources Agency, to non-agricultural use?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
b) Conflict with existing zoning for agricultural use, or a Williamson Act contract?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
c) Conflict with existing zoning for, or cause rezoning of, forest land (as defined in Public Resources Code section 12220(g)), timberland (as defined by Public Resources Code section 4526), or timberland zoned Timberland Production (as defined by Government Code section 51104(g))?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
d) Result in the loss of forest land or conversion of forest land to non-forest use?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
e) Involve other changes in the existing environment which, due to their location or nature, could result in conversion of Farmland, to non-agricultural use or conversion of forest land to non-forest use?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>

Environmental Setting

Santa Clara County has approximately 27,000 acres of agricultural land, with nearly half of the County's land being rangeland and productive farmland (SCVOSA, 2014). The project area is located within the City of San José, its entirety designated as urban service area (County of Santa Clara, 1994).

Discussion

- a-e) **No Impact.** The project area is located within the City of San José in a highly urbanized area. The Envision San José 2040 General Plan designates the SJCC campus as Public/Quasi-Public land, which is a category for public land uses including schools and colleges) and some private land uses (including private schools) (City of San José, 2020). The California Department of Conservation (DOC) administers the Farmland Mapping and Monitoring Program (FMMP), a statewide agricultural land inventory. The entire SJCC campus is designated as Urban and Built-Up Land and Other Land by the DOC under the FMMP. As such, none of the campus is used for agricultural purposes, or is considered Prime Farmland, Unique Farmland, or Farmland of Statewide Importance (Farmland) as designated by the FMMP (DOC, 2016).

The Williamson Act, also referred as the California Land Conservation Act of 1965, enables local governments to enter into contracts with private landowners for the purpose of restricting specific parcels of land to agricultural or related open space use. There is currently no Williamson Act contract applicable to the project site or SJCC campus. Accordingly, implementation of the proposed SJCC FMP would not result in any change in land use that could convert Prime Farmland, Unique Farmland, Farmland of Statewide Importance, or Williamson Act Lands to non-agricultural use. There are no agricultural uses within or adjacent to the SJCC campus.

Forest land is defined as native tree cover at a density of greater than 10 percent, which allows for management of timber, aesthetics, fish and wildlife, recreation, and other public benefits. None of the project area is zoned as forest land, timberland, or Timberland Production, and no such uses exist in the project site or in the vicinity of the SJCC campus. Therefore, no impacts would occur to agriculture and forestry resources.

Air Quality

<i>Issues (and Supporting Information Sources):</i>	<i>Potentially Significant Impact</i>	<i>Less Than Significant with Mitigation Incorporated</i>	<i>Less Than Significant Impact</i>	<i>No Impact</i>
III. AIR QUALITY —				
Where available, the significance criteria established by the applicable air quality management district or air pollution control district may be relied upon to make the following determinations. Would the project:				
a) Conflict with or obstruct implementation of the applicable air quality plan?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
b) Result in a cumulatively considerable net increase of any criteria pollutant for which the project region is non-attainment under an applicable federal or state ambient air quality standard?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
c) Expose sensitive receptors to substantial pollutant concentrations?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
d) Result in other emissions (such as those leading to odors) adversely affecting a substantial number of people?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>

Discussion

- a) **Potentially Significant Impact.** The most recent clean air plan is the Bay Area 2017 Clean Air Plan that was adopted by the Bay Area Air Quality Management District (BAAQMD) in April 2017. Consistency with this plan is the basis for determining whether development under the proposed SJCC FMP would conflict with or obstruct implementation of air quality plans. Development under the proposed SJCC FMP would increase both stationary and mobile sources of air emissions, which contribute to regional air pollution. Air pollutant emissions also could occur over the short term in association with construction activities that emit exhaust and dust that could affect local and regional air quality. The SJCC FMP EIR will include an evaluation of the potential for the proposed project to conflict with the local clean air plan.
- b) **Potentially Significant Impact.** Construction and operation of development projects under the proposed SJCC FMP would generate air pollutants that could be considerable in a regional, cumulative context. The SJCC FMP EIR will include an evaluation of the air quality impacts that could result from pollutant emissions related to implementation of the SJCC FMP for which the air basin is in nonattainment of the ambient air quality standards.
- c, e) **Potentially Significant Impact.** Construction and operation of development under the proposed SJCC FMP could expose sensitive receptors on the campus site and in adjacent residential neighborhoods to substantial pollutant concentrations (including toxic air contaminants). The SJCC FMP EIR will include an evaluation of the air quality impacts related to exposure of sensitive receptors to pollutant concentrations.
- d) **No Impact.** The proposed SJCC FMP would not include development of land uses identified by BAAQMD as typically associated with odors, such as wastewater treatment plants, landfills, composting facilities, refineries, or chemical plants (BAAQMD, 2017).

As the proposed SJCC FMP would not result in development that would be a potential source of odors, this topic will not be evaluated further in the SJCC FMP EIR.

Biological Resources

<i>Issues (and Supporting Information Sources):</i>	<i>Potentially Significant Impact</i>	<i>Less Than Significant with Mitigation Incorporated</i>	<i>Less Than Significant Impact</i>	<i>No Impact</i>
IV. BIOLOGICAL RESOURCES — Would the project:				
a) Have a substantial adverse effect, either directly or through habitat modifications, on any species identified as a candidate, sensitive, or special-status species in local or regional plans, policies, or regulations, or by the California Department of Fish and Game or U.S. Fish and Wildlife Service?	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
b) Have a substantial adverse effect on any riparian habitat or other sensitive natural community identified in local or regional plans, policies, regulations, or by the California Department of Fish and Game or U.S. Fish and Wildlife Service?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
c) Have a substantial adverse effect on state or federally protected wetlands (including, but not limited to, marsh, vernal pool, coastal, etc.) through direct removal, filling, hydrological interruption, or other means?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
d) Interfere substantially with the movement of any native resident or migratory fish or wildlife species or with established native resident or migratory wildlife corridors, or impede the use of native wildlife nursery sites?	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
e) Conflict with any local policies or ordinances protecting biological resources, such as a tree preservation policy or ordinance?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
f) Conflict with the provisions of an adopted Habitat Conservation Plan, Natural Community Conservation Plan, or other approved local, regional, or state habitat conservation plan?	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>

Introduction

This section describes the existing conditions for biological resources present within the SJCC campus (“project”) site and surrounding area. The term “study area” is used to identify the area investigated in the reconnaissance-level biological survey and encapsulates adjacent areas to the project site that could be indirectly impacted by project activities. The study area includes the project site, plus a 75-foot buffer. The resources described include existing habitat conditions and special-status plants and wildlife (federally- or State-listed as endangered, threatened, proposed, and candidate species, and state or local species of concern).

The information on biological resources is based on a review of pertinent literature and database queries as well as a reconnaissance survey conducted by ESA staff on July 17, 2020, to characterize existing conditions, assess habitat quality, and assess the potential presence of special-status species and sensitive natural communities. The sources of reference data reviewed for this evaluation included the following:

- U.S. Fish and Wildlife Service (USFWS) list of Federal Endangered and Threatened Species that may occur in the proposed project area, and/or may be affected by the proposed project (USFWS 2020a);

- The California Department of Fish and Wildlife (CDFW) California Natural Diversity Database (CNDDB) list of special-status species occurrences within the proposed project area and within the San José West USGS 7.5-minute topographic quadrangles (CDFW 2020a);
- California Native Plant Society (CNPS) Inventory of Rare and Endangered Plants (v8-03) known to occur within the San José West USGS 7.5-minute topographic quadrangles (CNPS 2020);
- USFWS Critical Habitat for Threatened and Endangered Species (USFWS 2020b);
- Special Vascular Plants, Bryophytes, and Lichens List (CDFW 2020a);
- Special Animals List (CDFW 2019); and
- San José Community College 2025 Updated Facilities Master Plan Final Environmental Impact Report (San José Evergreen Community College District 2013).

Existing Habitat

The SJCC campus is located in an urban, densely developed area and is surrounded by commercial and residential development. The campus consists of buildings, paved parking lots and walking areas, turf grass sports fields, and landscaped areas. There are no natural habitats on or adjacent to the campus. Landscape trees are found throughout the campus and include species such as coast redwood (*Sequoia sempervirens*), sweetgum (*Liquidambar styraciflua*), silver dollar (*Eucalyptus polyanthemos*), Chinese pistache (*Pistacia chinensis*), Canary Island pine (*Pinus canariensis*), London plane (*Platanus × acerifolia*), coast live oak (*Quercus agrifolia*), cork oak (*Quercus suber*), mayten (*Maytenus boaria*), and southern magnolia (*Magnolia grandiflora*).

Special-Status Species

Special-status species are regulated under the State and federal Endangered Species Acts or other regulations, or are species that are considered sufficiently rare by the scientific community to qualify for such listing. These species are in the following categories:

1. Species listed or proposed for listing as threatened or endangered under the federal Endangered Species Act (FESA) (50 Code of Federal regulations [CFR] 17.12 [listed plants], 17.11 [listed animals] and various notices in the Federal Register [FR] [proposed species]);
2. Species that are candidates for possible future listing as threatened or endangered under FESA (61 FR 40, February 28, 1996);
3. Species listed or proposed for listing by the State of California as threatened or endangered under the California Endangered Species Act (CESA) (14 California Code of Regulations [CCR] 670.5);
4. Plants listed as rare or endangered under the California Native Plant Protection Act (NPPA) (California Fish and Game Code, Section 1900 et seq.);
5. Animal species of special concern to CDFW;
6. Animals fully protected under Fish and Game Code (California Fish and Game Code, Sections 3511 [birds], 4700 [mammals], and 5050 [reptiles and amphibians]);

7. Species that meet the definitions of rare and endangered under CEQA. CEQA Guidelines Section 15380 provides that a plant or animal species may be treated as “rare or endangered” even if not on one of the official lists; and
8. Plants considered under the CDFW and CNPS to be “rare, threatened or endangered in California” (California Rare Plant Rank [CRPR] 1A, 1B, and 2) as well as CRPR Rank 3 and 4 plant species.¹

Conclusions regarding habitat suitability and species occurrence are based on the analysis of existing literature and databases described above, known habitats occurring within the project site and regionally, and observations made during the reconnaissance survey. The results of database searches from USFWS, CNDDDB, and CNPS (**Appendix A**), combined with knowledge of the habitat present in the study area and the habitat requirements of special-status species, formed the basis for analysis of special-status species with the potential to occur in the study area (refer to **Table 3**). Species that are not expected to occur because of the absence of suitable habitat, or because the project area is outside of the species’ known range, were excluded from the table.

No special-status plant species were determined to have a moderate or high potential to occur in the study area. Wildlife species with a moderate or high potential for occurrence are discussed below. While not expected to occur within the study area, Bay checkerspot butterfly (*Euphydryas editha bayensis*) is also discussed, as the project is located within the boundaries of the Santa Clara Valley Habitat Conservation Plan (HCP/NCCP), which covers this species.

Special-Status Birds

Two special-status raptors have the potential to nest within trees and buildings located within the study area. American peregrine falcon (*Falco peregrinus anatum*) is a State Fully Protected species and a federal Bird of Conservation Concern. This species is known to nest in tall buildings in urban locations, including the nearby San José City Hall building, where peregrine falcons have nested since 2007. Cooper’s hawk (*Accipiter cooperii*) is included on the California Department of Fish and Wildlife’s Special Animals List as a “watch list” species. This species mainly preys on birds and is typically found in woodlands and forests, but is also commonly found in suburban areas. Cooper’s hawks nest in a variety of trees including but not limited to pines, oaks, beeches, and spruces. Trees and buildings within the SJCC campus provide potential nesting habitat for these species.

¹ CRPR 3 and 4 plants may be analyzed under CEQA, pursuant to Section 15380 of the CEQA Guidelines, if sufficient information is available to assess potential impacts to such plants. Factors such as regional rarity vs. statewide rarity should be considered in determining whether cumulative impacts to a CRPR 3 or 4 plant are significant even if individual project impacts are not. CRPR 3 and 4 plants may be considered regionally significant if, for example, the occurrence is located at the periphery of the species’ range, or exhibits unusual morphology, or occurs in an unusual habitat/substrate. For these reasons, CRPR 3 and 4 plants should be included in the special-status species analysis. CRPR 3 and 4 plants are also included in the CNDDDB Special Plants, Bryophytes, and Lichens List. [Refer to the current online published list available at: <http://www.dfg.ca.gov/biogeodata>.]

TABLE 3
SPECIAL-STATUS SPECIES WITH POTENTIAL TO OCCUR WITHIN THE STUDY AREA

Common Name Scientific Name	Status	General Habitat Requirements	Potential for Species Occurrence
Invertebrates			
Bay checkerspot butterfly <i>Euphydryas editha bayensis</i>	FT/—/XSIC: CI	Found in areas with shallow, serpentine-derived soil. The primary larvae host plant is dwarf plantain (<i>Plantago erecta</i>). Larvae feed on purple owl's clover (<i>Castilleja densiflora</i> or <i>C. exserta</i>) when dwarf plantain is not available or has dried up. Adults rely on nectar from these host plants.	Unlikely. The study area lacks suitable serpentine soil habitat and associated host plants.
Birds			
Cooper's hawk <i>Accipiter cooperii</i>	—/WL/—	Nests in riparian areas and oak woodlands, and hunts songbirds at woodland edges. Increasingly found nesting in neighborhood street trees.	Moderate. Suitable habitat in trees planted within SJCC campus. CNDDDB record from 2003 of nesting Cooper's hawk pair in trees approximately 0.9 mile south of campus.
Peregrine falcon (nesting) <i>Falco peregrinus</i>	FDL/SDL;FP/—	Breeds near water at varied nest sites, including natural cliff ledges and potholes, tall metropolitan buildings and bridges, and former nests of common raven and osprey on electric transmission towers and boat navigation channel markers (towers).	Moderate. Active nest site at San José City Hall building approximately 2.5 miles from project since 2007. Likely to forage in study area.
Mammals			
Pallid bat <i>Antrozous pallidus</i>	—/SSC/WBWG: High	A wide variety of habitats is occupied, including grasslands, shrublands, woodlands, and forests from sea level up through mixed conifer forests. The species is most common in open, dry habitats with rocky areas for roosting. Roosts in buildings, caves, tree hollows, crevices, mines, and bridges. Sensitive to human disturbance.	Low. Buildings on campus provide potential roosting habitat. However, the species has been extirpated from the valley floor. ² One CNDDDB record from 1943 for non-specific location in the vicinity of San José.
Townsend's big-eared bat <i>Corynorhinus townsendii</i>	—/SSC/WBWG: High	Roosts in caves, mines, hollow trees, and tunnels with minimal disturbance, but can also be found in abandoned open buildings or other human-made structures. Found in all habitats except subalpine and alpine habitats, and may be found at any season throughout its range. Very sensitive to human disturbance.	Low. Study area lacks favorable foraging and roosting habitat. One CNDDDB record from 1943 for non-specific location in the vicinity of San José.
Hoary bat <i>Lasiurus cinereus</i>	—/*/WBWG: Medium	Solitary rooster in tree foliage. Habitats include woodlands, forests, and riparian habitats with dense foliage. Winters along the coast and in Southern California, but is not known to breed on the valley floor. During migration can be found throughout California.	Low. Study area lacks favorable foraging and roosting habitat. One CNDDDB occurrence from 1990 recorded at the Interstate 280/State Route 87 (Guadalupe Freeway) interchange, and one CNDDDB record from 1893 for a non-specific location in Santa Clara.
Yuma myotis <i>yumanensis</i>	—/*/WBWG: Low-Medium	Occupies wide variety of habitats below 8,000-foot elevation. Optimal habitats are open forests and woodlands with sources of water over which to feed. Cluster in groups of up to thousands in maternity colonies; adult males typically solitary; roost in crevices on buildings, under bridges, and trees; also in caves and mines. Common and widespread in California.	Low. Buildings on campus provide potential roosting habitat, however project site lacks favorable foraging habitat. Closest suitable habitat present 0.6 miles south of project site in riparian woodland surrounding Los Gatos Creek.

² Johnston, Dave, Wildlife Ecologist and Bat Biologist, H. T. Harvey & Associates, personal communication, March 10, 2020.

TABLE 3
SPECIAL-STATUS SPECIES WITH POTENTIAL TO OCCUR WITHIN THE STUDY AREA

NOTES:

CNDDDB = California Natural Diversity Database

KEY:

STATUS: Federal/State/Other (CNPS CRPR, Western Bat Working Group, Xerces Society for Invertebrate Conservation)

Federal (U.S. Fish and Wildlife Service)

FDL = delisted

FE = listed as endangered (in danger of extinction) by the federal government

FT = listed as threatened (likely to become endangered within the foreseeable future) by the federal government

FC = candidate to become a *proposed* species

BGEPA = Bald and Golden Eagle Protection Act

MMPA = Marine Mammal Protection Act

Other*Western Bat Working Group (WBWG)*

Low = Stable population

Medium = Need more information about the species, possible threats, and protective actions to implement

High = Imperiled or at high risk of imperilment

SOURCE: Data compiled by Environmental Science Associates in 2020

State (CDFW)

SE = listed as endangered by the State of California

ST = listed as threatened by the State of California

SC = state candidate for listing

* = Special Animals List

SSC = California Species of Special Concern

FP = state fully protected

SDL = delisted

SR = state rare (plants)

Xerces Society for Invertebrate Conservation (XSIC)

CI = Critically imperiled

IM = Imperiled

VU = Vulnerable

DD = Data Deficit

International Union for Conservation of Nature (IUCN) Red List

LC = Least concern

NT = Near threatened

VU = Vulnerable

EN = Endangered

CR = Critically endangered

Other Breeding and Migratory Birds

Trees within the study area offer foraging and nesting opportunity to a variety of resident and migratory birds. Species that could nest in the area include, but are not limited to, Anna's hummingbird (*Calypte anna*), black phoebe (*Sayornis nigricans*), house finch (*Haemorhous mexicanus*), and American crow (*Corvus brachyrhynchos*), among many others. The federal Migratory Bird Treaty Act (MBTA) and California Fish and Game Code protect raptors, most native migratory birds, and breeding birds that could occur on the project site and/or nest in the surrounding vicinity.

Bay Checkerspot Butterfly

Bay checkerspot butterfly is a federally Threatened species of butterfly that was historically found along the spine of the San Francisco Peninsula, from Twin Peaks to southern Santa Clara County and in a few pockets in Alameda and Contra Costa counties. Typical habitat for this species is found on shallow, serpentine-derived or similar soils, which support the larval host plants dwarf plantain (*Plantago erecta*) and purple owl's clover (*Castilleja densiflora* or *C. exserta*). The nearest CNDDDB record for this species is approximately 6.7 miles southeast of the SJCC campus (CNDDDB Occurrence No. 13). No suitable habitat for this species is present on the campus due to the absence of the necessary soil and vegetation conditions, which was confirmed during the reconnaissance survey for areas within the study area. However, increased emissions of nitrogen from an increase in vehicle trips associated with the SJCC campus could result in potential impacts to Bay checkerspot butterfly habitat. These impacts are discussed in section f), below.

Discussion

- a) **Less than Significant with Mitigation Incorporated.** The CNDDDB and USFWS document a total of 24 special-status wildlife species in the San José West 7.5-minute quadrangles, and the CNDDDB, USFWS, and CNPS document a total of 5 plant species in these quadrangles (**Appendix B**). The following discussion analyzes potential significant impacts to species that have a moderate or high likelihood to occur in the study area. Suitable habitat for other special-status plant and wildlife species known from the project region (e.g., burrowing owl (*Athene cunicularia*), California tiger salamander (*Ambystoma californiense*)), was determined to be absent.

Special Status and Other Nesting Birds

Trees located in the study area could provide nesting habitat for special-status raptors including Cooper's hawk, as well as other native migratory birds. Existing buildings within the study area provide potential nesting habitat for American peregrine falcon. Construction related activities could indirectly impact these species during nesting by creating enough disturbance to result in the loss of nests, eggs, or nestlings, or by causing nest abandonment, which would be a significant impact.

Implementation of **BIO-1: Avoidance and Minimization Measures for Nesting Birds** would reduce impacts to **less than significant** by conducting a pre-construction surveys during the nesting season and placing no-work buffers around any active nests. This

- measure applies to all nesting birds protected by the federal MBTA and Section 3503 of the California Fish and Game Code.
- b) **No Impact.** The SJCC campus is not located within designated critical habitat. The proposed development under the SJCC FMP is located within developed areas on campus that do not contain riparian habitat or any sensitive natural communities. As such, implementation of the SJCC FMP would not result in any impacts to sensitive habitats.
 - c) **No Impact.** The reconnaissance survey conducted by ESA confirmed that are no potentially jurisdictional wetlands or waters present within the study area. Implementation of the SJCC FMP would not result in any adverse impacts to State or federally protected wetlands.
 - d) **Less than Significant with Mitigation Incorporated.** The areas proposed for development under the SJCC FMP within the existing SJCC campus provide no corridors for movement of wildlife species. Therefore, the SJCC FMP would have no impact to wildlife movement corridors. Trees within the study area provide stopover and nesting habitat for migratory birds. Implementation of **Mitigation Measure BIO-1**, described above, would address potential impacts of the SJCC FMP to nesting birds and reduce impacts to **less than significant**.
 - e) **No Impact.** Construction of facilities within the SJCC campus may result in the removal of some trees. Implementation of the project would not conflict with any local policies or ordinances protecting biological resources, such as a tree preservation or policy or ordinance. The City of San José tree ordinance requires a permit for removal of any trees on private property that have a trunk circumference of 56 inches or more, measured 2 feet above grade. The SJECCD is exempted by the state constitution from compliance with local land use regulations and ordinances. As such, there would be no impact with respect to this criterion.
 - f) **Less than Significant with Mitigation Incorporated.** The Santa Clara Valley Habitat Conservation Plan/Natural Community Conservation Plan (HCP/NCCP) is a regional partnership between six local partners (the County of Santa Clara, Santa Clara Valley Transportation Authority, Santa Clara Valley Water District, and the Cities of San José, Gilroy, and Morgan Hill) and two Wildlife Agencies (the CDFW and USFWS). The HCP/NCCP provides a framework for promoting the protection and recovery of natural resources, including endangered species, while streamlining the permitting process for planned development, infrastructure, and maintenance activities. The HCP/NCCP will allow the signatories to receive endangered-species permits for activities and projects they conduct and those under their jurisdiction.

The SJCC campus is located within the HCP/NCCP area. However, as project activities under the SJCC FMP would occur on developed areas within the SJCC campus, it would not result in any impacts to natural land cover types as described in the HCP/NCCP. The HCP/NCCP analyzed impacts to bay checkerspot butterfly and found that increased emissions of nitrogen from vehicles trips associated with new development in the Santa

Clara Valley pose a threat to bay checkerspot butterfly habitat. As the SJCC FMP is expected to generate additional daily vehicle trips, thus contributing to an overall increase in nitrogen emissions, impacts to bay checkerspot butterfly are cumulatively considerable.

The HCP/NCCP identifies a one-time mitigation payment of \$5.31 for each new vehicle trip generated by new development to mitigate for indirect impacts resulting in increases in airborne nitrogen deposition. Implementation of **BIO-2: Mitigation for Nitrogen Deposition** would reduce impacts of the SJCC FMP to **less than significant** by payment of HCP/NCCP nitrogen deposition fees.

Mitigation Measures

Mitigation Measure BIO-1 Avoidance and Minimization Measures for Nesting Birds

- No preconstruction surveys or avoidance measures are required for construction activities that would be completed entirely during the non-nesting season (September 1 to January 31).
- For all construction activities scheduled to occur during the nesting season (February 1 to August 31), a qualified biologist (i.e., experienced with the nesting behavior of bird species of the region) shall conduct a preconstruction avian nesting survey no more than 14 days prior to the start of staging, site clearing, and/or ground disturbance.
- If there is a break of 14 days or more in construction activities during the breeding season, a new nesting bird survey shall be conducted before reinitiating construction.
- The surveying biologist shall be capable of determining the species and nesting stage without causing intrusive disturbance. The surveys shall cover all potential nesting sites within 500 feet of the project area for raptors and within 300 feet for other birds.

If active nests are found in the proposed project area or vicinity, a no-disturbance buffer shall be created around the active nests, as determined by a qualified biologist. The buffer distance can be reduced in coordination with CDFW if construction activities would not cause an adult to abandon an active nest or young or change an adult's behavior so it could not care for an active nest or young. If the nest(s) are found in an area where ground disturbance is scheduled to occur, ground disturbance shall be delayed until after the birds have fledged.

If work must occur within the established buffers, nests shall be continuously surveyed for the first 24 hours prior to any construction related activities to establish a behavioral baseline and, once work commences, all nests shall be continuously monitored to detect any behavioral changes as a result of the project, if feasible. If behavioral changes are observed, work causing the change shall cease and CDFW shall be consulted for additional avoidance and minimization measures. The avoidance and minimization measures shall ensure that the construction activities do not cause the adult to abandon an active nest or young or change an adult's behavior so it could not care for an active nest or young.

Mitigation Measure BIO-2 Mitigation for Nitrogen Deposition

The SJECCD shall provide a one-time payment of \$5.31 per new vehicle trip associated with implementation of the project to the Santa Clara Valley Habitat Agency for use in acquiring and managing land consistent with the adopted Santa Clara Valley HCP/NCCP.

Cultural Resources

<i>Issues (and Supporting Information Sources):</i>	<i>Potentially Significant Impact</i>	<i>Less Than Significant with Mitigation Incorporated</i>	<i>Less Than Significant Impact</i>	<i>No Impact</i>
V. CULTURAL RESOURCES — Would the project:				
a) Cause a substantial adverse change in the significance of a historical resource pursuant to §15064.5?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
b) Cause a substantial adverse change in the significance of an archaeological resource pursuant to §15064.5?	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
c) Disturb any human remains, including those interred outside of dedicated cemeteries?	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>

Discussion

- a) **Potentially Significant Impact.** CEQA Guidelines Section 15064.5 requires the lead agency to consider the effects of a project on historical resources. An historical resource is defined as any building, structure, site, or object listed in or determined to be eligible for listing in the California Register, or determined by a lead agency to be significant in the architectural, engineering, scientific, economic, agricultural, educational, social, political, or cultural annals of California. The proposed project would include alterations to historic age structures, which may be considered of sufficient historic quality that the alterations could be a potentially significant impact. For this reason, this impact will be studied in the EIR.
- b) **Less than Significant with Mitigation Incorporated.** This section discusses archaeological resources, both as historical resources according to CEQA Guidelines Section 15064.5, as well as unique archaeological resources, as defined in PRC Section 21083.2(g). A significant impact would occur if the project would cause a substantial adverse change to an archaeological resource through physical demolition, destruction, relocation, or alteration of the resource.

ESA received the results of a records search at the Northwest Information Center (NWIC) of the California Historical Resources Information System on July 27, 2020 (File No. 20-0118). The review included the SJCC campus and a 0.5-mile radius. Previous surveys, studies, and site records were accessed. Records were also reviewed in the Built Environment Resources Directory for Santa Clara County, which contains information on places of recognized historical significance including those evaluated for listing in the *National Register of Historic Places*, the *California Register of Historical Resources*, the *California Inventory of Historical Resources*, *California Historical Landmarks*, and *California Points of Historical Interest*. The purpose of the records search was to (1) determine whether known cultural resources have been recorded within the project vicinity; (2) assess the likelihood for unrecorded cultural resources to be present based on historical references and the distribution of nearby sites; and (3) develop a context for the identification and preliminary evaluation of cultural resources.

Results of the records search indicate that no archaeological resources have been previously recorded on the SJCC campus. Two resources (P-43-002277 and P-43-002692) with an archaeological component have been recorded within 0.5-mile of the SJCC campus.

P-43-002277 is a concentration of bricks and other historic-era materials identified in a trench during geoarchaeological investigations (Wiberg, 2008). The materials were identified 80-90 cm below the surface and most likely date to the mid-20th century. P-43-002692 is a historic-era cemetery associated with Santa Clara Valley Medical Center, which was previously known as the Santa Clara County Infirmary. The cemetery was in use between ca. 1890 and ca. 1930 and was largely abandoned and forgotten after this time. Archaeological excavation of the cemetery has identified the remains of over 100 individuals and associated grave goods (Beck, 2012; Beck, 2015).

Five archaeological resource reports include portions of the SJCC campus (Archaeological Resource Management, 1999; Cartier, 1977; Supernowicz, 2011; URS, 2015; Wills, 2010). Many other cultural resources studies have been completed within 0.5-mile of the SJCC campus (Banet et al., 1990; Busby, 2003; Cartier, 1981; Cartier 1987; Cartier 1990; Chavez and Hupman, 1990; Hill, 1999; Hill, 2009; Hill et al., 1999; Losee, 2006; Nelson et al., 2000; Oetting, 1981; Wiberg and Meyer, 2009; Wire, 1981). These studies include record searches, surveys, excavation reports, and technical studies to support CEQA documentation.

On July 17, 2020, an ESA archaeologist conducted a survey of the SJCC campus. The majority of the campus is fully developed with paved roads and sidewalks, buildings, sports fields, and landscaping. Areas with visible soils were surveyed at 10 meter intervals for cultural material, while excavation grading for a separate project in the northwest portion of the campus exposed subsurface soils up to two feet below ground surface for inspection. No archaeological resources were identified during the field survey, and no evidence of buried soil horizons were evident in the exposed subsurface soils.

The proposed SJCC FMP is located in a Holocene-age alluvial fan. This geologic formation has a high potential to contain buried archaeological resources (Meyer and Rosenthal, 2007). Increasing with depth, the alluvium becomes Pleistocene in age, which has a low archaeological sensitivity. Buried site sensitivity within Holocene-age sediments increases with proximity to perennial water sources, the stability of the landform, and other factors that make the location more desirable for human habitation. The SJCC campus is approximately 0.6 mile northwest of Los Gatos Creek.

Based on the results of the records search, background research, geoarchaeological analysis, and surface survey, no archaeological resources have been identified close to the SJCC campus, and the campus has a moderate potential to uncover buried archaeological resources. As such, the proposed SJCC FMP may impact archaeological resources pursuant to CEQA Guidelines Section 15064.5.

While unlikely, if any previously unrecorded archaeological resources are identified during SJCC FMP ground disturbing activities and were found to qualify as an historical resource per CEQA Guidelines Section 15064.5 or a unique archaeological resource, as defined in PRC Section 21083.2(g), any impacts to the resource resulting from the SJCC FMP could be potentially significant. Any such potential significant impacts would be reduced to a less than significant level by implementing **Mitigation Measure CUL-1**.

- c) **Less than Significant with Mitigation Incorporated.** Based on the records search and survey results, no human remains are known to exist within the SJCC campus. It is possible that human remains would be encountered during construction of the proposed SJCC FMP. Therefore, the possibility of inadvertent discovery cannot be entirely discounted. In the event of the discovery of human remains during project construction activities, implementation of the following actions would reduce potential impacts to human remains.

Mitigation Measures

Mitigation Measure CUL-1. Accidental Discovery of Cultural Resources

If prehistoric or historic-period archaeological resources are encountered, all construction activities within 100 feet shall halt and the SJECCD shall be notified. Prehistoric archaeological materials might include obsidian and chert flaked-stone tools (e.g., projectile points, knives, scrapers) or toolmaking debris; culturally darkened soil (“midden”) containing heat-affected rocks, artifacts, or shellfish remains; and stone milling equipment (e.g., mortars, pestles, handstones, or milling slabs); and battered stone tools, such as hammerstones and pitted stones. Historic-era materials might include deposits of metal, glass, and/or ceramic refuse.

A Secretary of the Interior-qualified archaeologist shall inspect the findings within 24 hours of discovery. If it is determined that the project could damage a historical resource or a unique archaeological resource (as defined pursuant to the CEQA Guidelines), mitigation shall be implemented in accordance with PRC Section 21083.2 and Section 15126.4 of the CEQA Guidelines, with a preference for preservation in place. Consistent with Section 15126.4(b)(3), this may be accomplished through planning construction to avoid the resource; incorporating the resource within open space; capping and covering the resource; or deeding the site into a permanent conservation easement. If avoidance is not feasible, a qualified archaeologist shall prepare and implement a detailed treatment plan in consultation with the SJECCD. Treatment of unique archaeological resources shall follow the applicable requirements of PRC Section 21083.2. Treatment for most resources would consist of (but would not be not limited to) sample excavation, artifact collection, site documentation, and historical research, with the aim to target the recovery of important scientific data contained in the portion(s) of the significant resource to be impacted by the project. The treatment plan shall include provisions for analysis of data in a regional context, reporting of results within a timely manner, curation of artifacts and data at an approved facility, and dissemination of reports to local and state repositories, libraries, and interested professionals.

Mitigation Measure CUL-2: Inadvertent Discovery of Human Remains

If potential human remains are encountered, all work will halt within 100 feet of the find and the on-site construction crew will immediately contact the SJECCD. The SJECCD will contact the Santa Clara County coroner in accordance with PRC Section 5097.98 and Health and Safety Code Section 7050.5. If the coroner determines the remains are Native American, the coroner will contact the Native American Heritage Commission (NAHC). As provided in PRC Section 5097.98, the NAHC will identify the person or persons believed most likely to be descended from the deceased Native American. The most likely descendent will make recommendations for means of treating, with appropriate dignity, the human remains and any associated grave goods as provided in PRC Section 5097.98.

Energy

<i>Issues (and Supporting Information Sources):</i>	<i>Potentially Significant Impact</i>	<i>Less Than Significant with Mitigation Incorporated</i>	<i>Less Than Significant Impact</i>	<i>No Impact</i>
VI. ENERGY — Would the project:				
a) Result in potentially significant environmental impact due to wasteful, inefficient, or unnecessary consumption of energy resources, during project construction or operation?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
b) Conflict with or obstruct a state or local plan for renewable energy or energy efficiency?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>

Discussion

- a-b) **Potentially Significant Impact.** The proposed SJCC FMP would result in new uses of energy resources during project construction and operation, which would have the potential to obstruct a state or local plan for renewable energy or energy efficiency. Analysis of energy-related impacts utilizes modeling and data prepared for the analysis of air quality impacts, all of which will be analyzed in the EIR. For this reason, project impacts related to energy will be analyzed in the EIR.
-

Geology and Soils

<i>Issues (and Supporting Information Sources):</i>	<i>Potentially Significant Impact</i>	<i>Less Than Significant with Mitigation Incorporated</i>	<i>Less Than Significant Impact</i>	<i>No Impact</i>
VII. GEOLOGY AND SOILS — Would the project:				
a) Directly or indirectly cause potential substantial adverse effects, including the risk of loss, injury, or death involving:				
i) Rupture of a known earthquake fault, as delineated on the most recent Alquist-Priolo Earthquake Fault Zoning Map issued by the State Geologist for the area or based on other substantial evidence of a known fault? Refer to Division of Mines and Geology Special Publication 42.	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
ii) Strong seismic ground shaking?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
iii) Seismic-related ground failure, including liquefaction?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
iv) Landslides?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
b) Result in substantial soil erosion or the loss of topsoil?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
c) Be located on a geologic unit or soil that is unstable, or that would become unstable as a result of the project, and potentially result in on- or off-site landslide, lateral spreading, subsidence, liquefaction, or collapse?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
d) Be located on expansive soil, as defined in Table 18-1-B of the Uniform Building Code (1994), creating substantial direct or indirect risks to life or property?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
e) Have soils incapable of adequately supporting the use of septic tanks or alternative waste water disposal systems where sewers are not available for the disposal of waste water?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
f) Directly or indirectly destroy a unique paleontological resource or site or unique geologic feature?	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>

Discussion

- a.i) **Less than Significant Impact.** The SJCC campus is not located in an Earthquake Fault Zone (EFZ) as delineated on an Earthquake Zones of Required Investigation Map (EZRIM) published by the California Geological Survey (CGS) as required by the Alquist-Priolo Earthquake Fault Zoning Act (CGS, 2002). There are Holocene-active faults in the surrounding area (i.e., the Hayward, San Andreas, Calaveras, and Monte Vista faults), the closest being the Southeast Extension section of the Hayward fault zone, approximately 7 miles to the northeast of the campus (CGS, 2010).

There are two pre-Holocene faults close to the SJCC campus; The San Jose fault is approximately 0.1-mile southwest of the campus and the Stanford Fault is approximately 0.5-mile southwest of the campus (CGS, 2010). Pre-Holocene faults are not considered “active faults,” and have not shown surface rupture in the last 11,700 years (CGS, 2018).

The Southeast Extension section of the Hayward fault zone is designated an Earthquake Fault Zone (CGS, 2020); As stated above, the campus is 7 miles from the fault zone and outside of the EFZ boundary.

Given the distance of the SJCC campus from any EFZ or other Holocene-active faults, the construction and operation of development under the SJCC FMP would not directly or indirectly cause potential substantial adverse effects, including the risk of loss, injury, or death involving rupture of a known earthquake fault. Therefore, there would be a less than significant impact.

- a.ii) **Less than Significant Impact.** Strong seismic ground shaking could occur in the study area because there are active fault zones near the SJCC campus, notably the Hayward fault zone. While the campus is located in a seismically active area, the SJCC FMP would not exacerbate the existing risk of seismic shaking or associated damage. Additionally, the California Building Code (CBC) requires that site-specific geotechnical investigations be performed, and subsequent report produced, to inform the design construction, renovation, and demolition of any structures included as part of the SJCC FMP. Compliance with the CBC is required by State law in order to receive the proper permits to begin construction.

Development under the SJCC FMP would be constructed following the seismic design parameters detailed in the required site-specific geotechnical investigations and would be implemented to minimize any adverse effects associated with seismic ground shaking. Compliance with all the applicable design parameters within the CBC and the geotechnical investigations would reduce the impacts associated with seismic ground shaking to a less than significant level.

- a.iii) **Less than Significant Impact.** As noted above, the development under the SJCC FMP would be designed consistent with the applicable sections of the CBC, which require that site-specific geotechnical investigations be performed and the findings of that investigation be detailed in a report. The geotechnical reports will include seismic design parameters, and other geotechnical engineering recommendations to be implemented during the design of the project components, which when implemented will reduce the risk from seismically-induced ground failures.

The EZRIM published by the CGS (which delineate liquefaction and earthquake-induced landslide zones, as well as EFZs) indicates the SJCC campus is not within a liquefaction zone (CGS, 2020; CGS, 2002), and has a low potential for liquefaction during a major earthquake.

Regardless of the fact that the campus is not within a liquefaction zone, the geotechnical investigation will, if necessary, provide foundation design recommendations and soil engineering parameters that will address any potential impacts related to liquefaction. Additionally, as discussed above in item a.ii), project components would be designed and constructed in accordance with all the requirements detailed in the CBC. Implementation

of these geotechnical recommendations would reduce liquefaction related impacts at the campus to less than significant.

- a.iv) **No Impact.** Due to the relatively flat terrane surrounding the area, the potential for landslides as a result of earthquakes is considered low. The EZRIM published by the CGS (which delineate earthquake-induced landslide zones, as well as EFZs) indicates the SJCC campus is not within an earthquake-induced landslide zone (CGS, 2020; CGS, 2002), and has a low potential to experience land sliding during a major earthquake. Additionally, geologic maps indicate the campus is not in an area that is mapped as having historic landslide movement, or where conditions indicate the potential for landslides (Dibblee & Minch, 2007; Wentworth et al., 1999). Therefore, there would be no impact.
- b) **Less than Significant Impact.** Project construction under the SJCC FMP would involve ground-disturbance including earthmoving, trenching, and grading. These activities would increase the susceptibility of sediments on the SJCC campus to erosion by wind or water. If not controlled and managed, erosion and sedimentation caused by the SJCC FMP could be substantial. However, as discussed in Section X, Hydrology and Water Quality, a Storm Water Pollution Prevention Plan (SWPPP) would be developed and implemented as part of the SJCC FMP in accordance with the NPDES General Permit for Stormwater Discharge Associated with Construction and Land Disturbance Activities. The SWPPP would include best management practices (BMPs) designed to control and reduce erosion. These measures would generally consist of silt fences, straw wattles, and gravel bags. The implementation of these erosion control measures would reduce construction impacts of the SJCC FMP to a less than significant level.

Once operational, the SJCC FMP components would include mostly paved surfaces, which would not be subject to substantial erosion or topsoil loss, and there would be no excavation or grading associated with operation of the SJCC FMP. Therefore, operational impacts are considered less than significant.

- c) **Less than Significant Impact.** The potential for seismic-related ground failure, including liquefaction and landslides for the campus, are discussed above under a.iii) and a.iv). As discussed in Question a.i), the campus area is not located in an area mapped as having historic landslide movement (Dibblee & Minch, 2007; Wentworth et al., 1999), or where conditions indicate a potential to experience landslides. Therefore, activities under the SJCC FMP would not result in any on- or off- site landslides. The EZRIM published by the CGS indicates the liquefaction risk at the campus is low (CGS, 2020; CGS, 2002); however, the required geotechnical investigations will include, if necessary, design recommendations and parameters to avoid potential damage related to liquefaction. Additionally, all SJCC FMP development would be designed and constructed consistent with applicable sections of the CBC, which includes requirements and guidelines to protect against liquefaction, lateral spreading, and soil collapse. Subsidence is generally associated with groundwater withdrawal; as the SJCC FMP would not include groundwater withdrawal, there would be little risk of subsidence as a result. Lateral

- spreading could occur during construction excavation if a liquefiable layer is present in the subsurface; however, graded areas would be required to comply with California Occupational Safety and Health (Cal/OSHA) Excavation and Trenching standards regulations, which would limit the potential for lateral spreading by sloping and shoring excavated areas. There would be no excavation activity during operation of the SJCC FMP, and the SJCC FMP would not use groundwater during operations, and adherence to state standards and standard engineering and construction techniques and recommendations from the geotechnical investigation would reduce impacts related to unstable soils to less than significant.
- d) **Less than Significant Impact.** According to available data from the Natural Resources Conservation Service (NRCS) Web Soil Survey, there is insufficient data to suggest that there are expansive soils underlying the SJCC campus (NRCS, 2020). As stated above, structures constructed under the SJCC FMP would be designed consistent with the applicable sections of the CBC, which include requirements to address the expansion potential of soils in site-specific geotechnical investigations. If a geotechnical investigation leads to the discovery of expansive soils at the campus site, soil engineering recommendations will be included in the geotechnical investigation report. Adherence to the design requirements provided in the geotechnical report, which would be compliant with CBC, would ensure impacts related to expansive soils at the campus would be less than significant.
- e) **No Impact.** The SJCC FMP would not utilize septic systems or other alternative disposal systems for the disposal of wastewater. Therefore, no impact would occur.
- f) **Less than Significant with Mitigation Incorporated.** A significant impact would occur if a project would destroy a unique paleontological resource or site, or a unique geologic feature. Paleontological resources are the fossilized evidence of past life found in the geologic record. Despite the tremendous volume of sedimentary rock deposits preserved worldwide, and the enormous number of organisms that have lived through time, preservation of plant or animal remains as fossils is an extremely rare occurrence. Because of the infrequency of fossil preservation, fossils—particularly vertebrate fossils—are considered to be nonrenewable resources. Because of their rarity, and the scientific information they can provide, fossils are highly significant records of ancient life.

Geologic Mapping by Dibblee and Minch and Wentworth et al. indicates Holocene-age alluvial fan deposits are mapped at the surface within the SJCC campus (Dibblee & Minch, 2007; Wentworth et al., 1999). While not mapped at the surface within the project site, geologic mapping indicates Pleistocene-age alluvial deposits and Santa Clara Formation are present within an approximate 5-mile radius of the campus, and may be present at depth.

According to the University of California Museum of Paleontology's (UCMP) fossil localities online database, there have been 35 vertebrate fossil specimens recovered from Pleistocene-age deposits throughout Santa Clara County (UCMP, 2020a). Additionally, in 2016, Kaitlin Maguire and Patricia Holroyd documented three new vertebrate fossil localities in Santa Clara County that have yielded several specimens, including

mammoth, horse, sloth, and bison fossils (Maguire & Holroyd, 2016). Due to the high occurrence of vertebrate fossils within Pleistocene-age deposits in the area, this unit is considered to have high paleontological potential.

The Santa Clara Formation has yielded 6 vertebrate fossils within Santa Clara County (UCMP, 2020b). Although the Santa Clara Formation is not presently mapped within the SJCC campus, due to its proximity to the campus, excavation and other ground disturbance associated with the project may encounter Santa Clara Formation during construction. The Santa Clara Formation it is considered to have a high paleontological potential due to the presence of vertebrate fossils in Santa Clara County.

The project description does not include specific details about the maximum depth to be excavated during construction, but excavation into previously undisturbed ground may occur during construction. Should paleontological resources be encountered during ground-disturbing activities, this would be a potentially significant impact.

Implementation of **Mitigation Measures GEO-1** would reduce the potential for significant impacts on paleontological resources by providing paleontological resources sensitivity training for construction workers; implementing a mitigation plan to ensure preservation of any paleontological resources encountered during construction; and salvaging and preparing significant fossil finds for curation. Because development of the project would require implementation of Mitigation Measures GEO-1, the SJCC FMP would not adversely affect paleontological resources, and this impact would be less than significant with mitigation incorporated.

Mitigation Measures

Mitigation Measure GEO-1: Preconstruction Training, and Treatment, Salvage, and Curation of Paleontological Resources.

Prior to construction, a qualified paleontologist meeting the standards of the Society of Vertebrate Paleontology (SVP) (SVP, 2010) with expertise in California paleontology and on-site construction worker training. The qualified paleontologist shall complete an institutional record and literature search and shall develop a paleontological resources training program for all construction personnel and field personnel who are involved with earthmoving activities, including the site superintendent, regarding the possibility of encountering fossils, the appearance and types of fossils that are likely to be seen during construction, the proper notification procedures should fossils be encountered, and the laws and regulations protecting paleontological resources.

If paleontological resources, such as fossilized bone, teeth, shell, tracks, trails, casts, molds, or impressions are discovered during ground-disturbing activities, all earthwork or other types of ground disturbance within 25 feet of the find shall stop immediately and the monitor shall notify the SJECCD. Work shall not resume until a qualified professional paleontologist can assess the nature and importance of the find. Based on the scientific value or uniqueness of the find, the qualified paleontologist may record the find and allow work to continue, or recommend salvage and recovery of the fossil. The qualified paleontologist may also propose modifications to the stop-work radius and the

monitoring level of effort based on the nature of the find, site geology, and the activities occurring on the site, and in consultation with the SJECCD.

If treatment and salvage is required, recommendations shall be consistent with the SVP 2010 Standard Procedures for the Assessment and Mitigation of Adverse Impacts to Paleontological Resources, and currently accepted scientific practice, and shall be subject to review and approval by the SJECCD. If required, treatment for fossil remains may include preparation and recovery of fossil materials so that they can be housed in an appropriate museum or university collection (e.g., the University of California Museum of Paleontology), and may also include preparation of a report for publication describing the finds. Upon receipt of the fossil collection, a signed repository receipt form shall be obtained and provided to the SJECCD. The qualified paleontologist shall prepare a paleontological resources report documenting the treatment, salvage, and, if applicable, curation of the paleontological resources. The SJECCD shall be responsible for the costs necessary to prepare and identify collected fossils, and for any curation fees charged by the paleontological repository. The SJECCD shall ensure that information on the nature, location, and depth of all finds is readily available to the scientific community through university curation or other appropriate means.

Greenhouse Gas Emissions

<i>Issues (and Supporting Information Sources):</i>	<i>Potentially Significant Impact</i>	<i>Less Than Significant with Mitigation Incorporated</i>	<i>Less Than Significant Impact</i>	<i>No Impact</i>
VIII. GREENHOUSE GAS EMISSIONS — Would the project:				
a) Generate greenhouse gas emissions, either directly or indirectly, that may have a significant impact on the environment?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
b) Conflict with an applicable plan, policy or regulation adopted for the purpose of reducing the emissions of greenhouse gases?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>

Discussion

- a - b) **Potentially Significant Impact.** The project would include uses that result in the emission of greenhouse gases (GHGs) from construction and operation of the development under the proposed SJCC FMP. GHGs generated by the proposed SJCC FMP may have the potential to either directly or indirectly have a significant impact on the environment, or conflict with an applicable plan, policy, or regulation adopted for the purpose of reducing GHG emissions. For these reasons, the impacts related to GHG emissions will be analyzed in the EIR.

Hazards and Hazardous Materials

<i>Issues (and Supporting Information Sources):</i>	<i>Potentially Significant Impact</i>	<i>Less Than Significant with Mitigation Incorporated</i>	<i>Less Than Significant Impact</i>	<i>No Impact</i>
IX. HAZARDS AND HAZARDOUS MATERIALS — Would the project:				
a) Create a significant hazard to the public or the environment through the routine transport, use, or disposal of hazardous materials?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
b) Create a significant hazard to the public or the environment through reasonably foreseeable upset and accident conditions involving the release of hazardous materials into the environment?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
c) Emit hazardous emissions or handle hazardous or acutely hazardous materials, substances, or waste within one-quarter mile of an existing or proposed school?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
d) Be located on a site which is included on a list of hazardous materials sites compiled pursuant to Government Code Section 65962.5 and, as a result, would it create a significant hazard to the public or the environment?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
e) For a project located within an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, would the project result in a safety hazard or excessive noise for people residing or working in the project area?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
f) Impair implementation of or physically interfere with an adopted emergency response plan or emergency evacuation plan?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
g) Expose people or structures, either directly or indirectly, to a significant risk of loss, injury, or death involving wildland fires?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>

Discussion

- a,b) **Less than Significant Impact.** During the construction phase of projects proposed under the SJCC FMP, construction equipment and materials would include fuels, oils and lubricants, solvents and cleaners, glues and adhesives, paints and thinners, degreasers, cement and concrete, and asphalt mixtures, which are all commonly used in construction. The routine use or an accidental spill of hazardous materials used in construction could result in exposures or inadvertent releases, which could adversely affect construction workers, the public, and the environment.

Construction activities would be required to comply with the numerous federal, State, and local hazardous materials regulations. These regulations are designed to ensure that hazardous materials are transported, used, stored, and disposed of in a safe and legal manner to protect construction workers' safety. They are also intended to reduce the potential for a release of construction-related fuels or other hazardous materials into the environment, including stormwater and downstream receiving water bodies. Contractors would be required to prepare and implement Hazardous Materials Business Plans requiring that hazardous materials used for construction be used properly and stored in appropriate

containers with secondary containment, as needed, to contain a potential release. In addition, the California Fire Code would require measures for the safe storage and handling of hazardous materials.

A search of the State Water Resources Control Board (SWRCB) GeoTracker and Department of Toxic Substances Control (DTSC) EnviroStor databases indicates that there are no known hazardous materials sites within the SJCC campus (SWRCB, 2020; DTSC, 2020). The GeoTracker and EnviroStor databases also indicate that there are Cleanup Program Sites and Leaking Underground Storage Tank (LUST) cleanup sites at two adjacent properties; however, the last of these sites was cleaned up and closed in 2001, and there is no indication that activities proposed under the SJCC FMP would encounter any contaminated soil or groundwater during construction.

As discussed in the Environmental Setting, 14 of the building on campus were built over 30 years ago, and of those, seven were built over 60 years ago. Two buildings on campus are planned for demolition. Of those, the Business Building was constructed in 1960 and the General Education Buildings were constructed in 1983. Because the Business building was constructed prior to the 1970s (over 50 years ago) it may potentially contain asbestos-containing materials (ACM) and lead-based paint (LBP), and a survey would be required prior to demolition to determine whether pre-demolition abatement is required.

The identification, removal, and disposal of ACM is regulated under 8 CCR Sections 1529 and 5208. The identification, removal, and disposal for LBP is regulated under CCR Title 8, Division 1, Chapter 4, Article 4, Section 1532.1. All work must be conducted by a state-certified professional, which would ensure compliance with all applicable regulations. If ACM and/or LBP are determined to exist on site, a site-specific hazard control plan must be prepared, detailing removal methods and specific instructions for providing protective clothing and equipment for abatement personnel. A State-certified ACM and/or LBP removal contractor would be retained to conduct the appropriate abatement measures as required by the plan. Wastes from abatement and demolition activities would be transported and disposed of at a landfill permitted to accept such waste and in compliance with applicable federal, state, and local laws and regulations.

Once all abatement measures have been implemented, the contractor would conduct a clearance examination and provide written documentation to the Bay Area Air Quality Management District (BAAQMD) that testing for ACM and LBP and, if required, abatement have been completed in accordance with all federal, state, and local laws and regulations.

As discussed in, Section VII, *Geology and Soils*, above, construction contractors would be required to prepare a Storm Water Pollution Prevention Plan (SWPPP) for construction activities in compliance with requirements of the National Pollutant Discharge Elimination System's (NPDES) General Construction Permit. The SWPPP would list the hazardous materials (including petroleum products) proposed for use during construction; describe spill prevention measures, equipment inspections, and

equipment and fuel storage; protocols for responding immediately to spills; and describe best management practices (BMPs) for controlling site run-on and runoff.

Additionally, the transportation of hazardous materials would be regulated by the Department of Transportation (DOT), California Department of Transportation (Caltrans), and the California Highway Patrol (CHP). Together, federal and State agencies determine driver-training requirements, load labeling procedures, and container specifications designed to minimize the risk of an accidental release.

In the event of a spill that releases hazardous materials, a coordinated response would occur at the federal, state, and local levels, including the City of San José. The San José Fire Department is the local hazardous materials response team. In the event of a hazardous materials spill, the San José Police and Fire Departments would be notified simultaneously and sent to the scene to assess and respond to the situation.

The required compliance with the numerous existing laws and regulations discussed above that govern the transportation, use, handling, and disposal of hazardous materials would limit the potential for creation of hazardous conditions from the use or accidental release of hazardous materials. This impact would be less than significant.

- c) **Less than Significant Impact.** There are two schools within 0.25-mile of the SJCC campus: Neighborhood Christian Preschool (approximately 0.1-mile east of the campus) and Sherman Oaks Elementary School (approximately 0.1-mile south of the campus). Additionally, the project site itself is a school campus.

As stated above, some of the buildings that are planned for renovation may have been built before the 1970s, and therefore, may contain ACM, LBP, or other hazardous building materials.

Demolition and renovation activities that may disturb or require the removal of building materials that consist of, contain, or are coated with ACM and/or LBP and/or other hazardous building materials (e.g., polychlorinated biphenyls [PCBs]), are required to comply with numerous existing regulations that require work sites to be inspected and/or tested for the presence of hazardous materials. If present, the hazardous materials must be managed and disposed of in accordance with applicable laws and regulations. Note that the treatment or removal of hazardous building materials is a standard condition of construction or occupation permits.

Once all abatement measures have been implemented, the contractor would conduct a clearance examination and provide written documentation to the BAAQMD that testing for ACM and LBP and, if required, abatement have been completed in accordance with all federal, State, and local laws and regulations.

The required compliance with the numerous existing laws and regulations discussed above that govern the transportation, use, handling, and disposal of hazardous materials

- would limit the potential for hazardous emissions and/or hazardous materials to impact nearby schools. This impact would be **less than significant**.
- d) **No Impact.** The SJCC campus is not included on a list of hazardous materials sites compiled pursuant to Government Code Section 65962.5 (referred to as the “Cortese List”). Therefore, the SJCC FMP would not create a significant hazard to the public or the environment; there would be **no impact** under this criterion.
 - e) **No Impact.** The nearest airport to the project site is the Norman Y. Mineta San José International Airport, approximately 2.5 miles north of the SJCC campus. According to the Comprehensive Land Use Plan (CLUP) for Norman Y. Mineta San Jose International Airport, the SJCC campus is not within the delineated Airport Influence Area (AIA), safety zones, or noise contours (Santa Clara County ALUC, 2016). The SJCC FMP would not result in a safety hazard or excessive noise for people working or residing in the area, and there would be **no impact**.
 - f) **Less than Significant Impact.** As discussed under Section XV, Public Services, under the SJCC FMP, fire and police protection services to the campus would continue to be adequately provided by the SJFD and the SJECCD Police Department. During critical situations and extreme emergencies, the SJECCD Police Department would communicate with the District Chancellor’s Office and President’s Office/Emergency Operations Center (EOC) Director, in accordance with the Incident Command System (ICS) concept, to enhance emergency response and service delivery.

The District maintains emergency guidelines and emergency evacuation maps for the SJCC campus for the campus population to follow in the event of an emergency or need for evacuation. The emergency evacuation maps provide locations of exit pathways and evacuation areas for the campus community to assemble in an emergency. The District also partners with a private entity to provide an emergency communication system capable to contacting the campus population via email, text and phone messages, to quickly disseminate emergency information to the campus community. In addition, the District can also disseminate emergency information through the District’s website, SJCC website, KJCC 104.1 FM, and the SJCC social media accounts. Under the SJCC FMP, the District would continue to implement these guidelines and systems, and coordinate with emergency response planning efforts with applicable jurisdictional emergency response providers.

Any potential changes in the circulation network at the campus under the SJCC FMP would be designed to accommodate appropriate emergency access to, and egress from, all areas of the campus. Project specific design, including internal circulation and building site plans, shall be subject to review and approval by applicable emergency service providers, per Fire Code requirements.

The design review process, and continued implementation of emergency response and evaluation practices and systems discussed above would be sufficient to ensure that

possible impairment of any emergency response or evacuation plans would be considered a less than significant impact.

- g) **Less than Significant Impact.** According to fire hazard mapping by the CAL FIRE Forest Resource Assessment Program (CAL FIRE, 2008) and the Santa Clara County Wildland Urban Interface Fire Area Map (Santa Clara County, 2009), the SJCC campus is not within a high fire hazard area. The use of construction equipment and the possible temporary on-site storage of fuels and/or other flammable construction chemicals could pose an increased fire risk resulting in injury to workers or the public during construction. However, construction contractors would be required to comply with hazardous materials storage and fire protection regulations, which would minimize potential for fire creation, and ensure that the risk of wildland fires during construction would be **less than significant**.

Hydrology and Water Quality

<i>Issues (and Supporting Information Sources):</i>	<i>Potentially Significant Impact</i>	<i>Less Than Significant with Mitigation Incorporated</i>	<i>Less Than Significant Impact</i>	<i>No Impact</i>
X. HYDROLOGY AND WATER QUALITY — Would the project:				
a) Violate any water quality standards or waste discharge requirements or otherwise substantially degrade surface or ground water quality?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
b) Substantially decrease groundwater supplies or interfere substantially with groundwater recharge such that the project may impede sustainable groundwater management of the basin?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
c) Substantially alter the existing drainage pattern of the site or area, including through the alteration of the course of a stream or river or through the addition of impervious surfaces, in a manner which would:				
i) result in substantial erosion or siltation on- or off-site;	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
ii) substantially increase the rate or amount of surface runoff in a manner which would result in flooding on- or offsite;	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
iii) create or contribute runoff water which would exceed the capacity of existing or planned stormwater drainage systems or provide substantial additional sources of polluted runoff; or	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
iv) impede or redirect flood flows?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
d) In flood hazard, tsunami, or seiche zones, risk release of pollutants due to project inundation?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
e) Conflict with or obstruct implementation of a water quality control plan or sustainable groundwater management plan?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>

Environmental Setting

The SJCC campus is located in an urban environment in downtown San José. There are no surface streams that transect the campus. The nearest waterway is Los Gatos Creek, located approximately 0.75 miles southeast of the campus. Los Gatos Creek is a tributary to the Guadalupe River, which flows in a generally south to north direction toward south San Francisco Bay, approximately 8.25 miles north of the campus. The campus is located within the Santa Clara Groundwater Basin, Santa Clara Subbasin (Basin 2.9-02), which is identified as a high-priority basin under the Sustainable Groundwater Management Act. The campus is located in Zone D, classified by the Federal Emergency Management Agency (FEMA) as an “area of undetermined but possible flood hazards.” The campus is not located in a 100-year floodplain.

Discussion

- a) **Less than Significant Impact.** The City of San Jose and other Permittees are required to comply with municipal regional stormwater permit (MRP) which contains provisions requiring low impact development (LID) measures for development within the city to limit stormwater contaminants from entering the municipal stormwater collection

network. As operation of the development under the SJCC FMP would comply with MRP requirements and is unlikely to have any impact associated with water quality degradation, this analysis focuses on potential impacts associated with the construction that would occur under the SJCC FMP.

The SJCC FMP would involve certain site clearing, excavation and other soil disturbing activities at the campus, which could generate runoff or otherwise discharge contaminants through stormwater potentially degrading surface or groundwater. As soil disturbance at the campus under the SJCC FMP would occur for construction over an area greater than one acre in size, the District and/or its contractor would be required to comply with the National Pollutant Discharge Elimination System (NPDES). The projects under the SJCC FMP would be required to obtain coverage under the NPDES General Permit for Discharges of Storm Water Associated with Construction Activity (Construction General Permit) through development and implementation of a Storm Water Pollution Prevention Plan (SWPPP). The SWPPP would identify site-specific best management practices (BMPs) designed to control stormwater at the project site, limit the amount of runoff leaving the construction site. Implementation of the BMPs would minimize the discharge of stormwater contaminants that could otherwise compromise surface or groundwater quality if mobilized through runoff into the municipal storm drain.

Construction of the project would include the use of equipment, fuels, oils and other hazardous materials. As described in Section IX, *Hazards and Hazardous Materials*, it is anticipated that the projects under SJCC FMP would develop and comply with a Hazardous Materials Business Plan for the use, transport, and storage of hazardous substances. With compliance with the terms of the Hazardous Materials Business Plan; adherence to Construction General Permit conditions including implementation of BMPs and site-specific measures designed to limit runoff identified in the SWPPP, construction of the project would have a less than significant impact associated with potential degradation to water quality.

- b) **Less than Significant Impact.** The proposed project would be located in the Santa Clara Valley Groundwater Basin, which is identified by the Department of Water Resources as a high priority basin under the Sustainable Groundwater Management Act (SGMA), although not one subject to conditions of critical overdraft (DWR, 2020). Salt water intrusion and subsidence have been identified as key groundwater resource issues associated with the basin (SCVWD, 2016).

The proposed project would utilize water for construction and operation sourced in part from groundwater resources supplied through the San Jose Water Company. It is anticipated that water would be used for dust control and other purposed uses during construction, and could be sourced in part through reclaimed water. Thus, water requirements for construction are anticipated to have a negligible effect on groundwater supplies.

Although new development under the proposed SJCC FMP may incrementally increase impervious surfaces upon the campus, the majority of proposed construction would occur

in previously developed and paved areas, and consequently, the change would be small and not have a major effect on groundwater recharge capability. Impacts would be considered less than significant.

- c.i) **Less than Significant Impact.** The project site is an existing developed campus. As under existing conditions, stormwater generated by future development under the SJCC FMP would be directed toward existing storm drainage facilities serving the campus. The campus is located on relatively flat terrain; thus, erosion is not a major concern at the site. Once the new or replacement facilities are constructed, the project sites would be either under impervious surfaces (buildings, pavement, etc.) or would be landscaped. This would minimize the potential for erosion and sedimentation in the long term.

As described in checklist item a), construction of projects under the SJCC FMP would disturb more than one acre of soil; therefore, a SWPPP would be required to be prepared as part of the Construction General Permit. A SWPPP would specify best management practices (BMPs) and measures to reduce the potential for erosion, and limit impacts associated with siltation and stormwater runoff, which could otherwise enter the municipal storm drain. BMPs could include site-specific measures such as strategic placement of inlet interceptors at storm drains, placement of straw wattles, or site management and good housekeeping practices such as maintaining daily coverage over spoils piles among others. With implementation of regulatory and permit requirements, and BMPs specified in the SWPPP, impacts would be less than significant.

- c.ii) **Less than Significant Impact.** As noted above, storm water generated by future development under the SJCC FMP would be directed toward existing storm drainage facilities serving the campus. In addition, as noted above, while the implementation of the SJCC FMP would incrementally increase the amount of impervious surface on campus, this increase in impervious surface would be small. Site runoff would be regulated and controlled through adherence to conditions in the Construction General Permit and implementation of BMPs identified in the SWPPP. As the campus is not located in a flood hazard area and the volume and rate of runoff would not be substantially different compared to existing conditions, impacts under this criterion are anticipated to be less than significant.

- c.iii) **Less than Significant Impact.** Project grading and site work has the potential to expose soils and could generate high sediment loads in stormwater runoff which could clog the storm drains or otherwise overwhelm existing drainage capacities. However, as previously described, the project would adhere to the conditions specified in the Construction General Permit and implement a SWPPP to reduce runoff on- and off-site.

Implementation of the SJCC FMP would increase impervious surfaces on campus, which could increase the volume of stormwater runoff in the City's storm drain system. However, this increase in runoff would be small and would not substantially exceed the capacity of existing or planned stormwater drainage systems. Following construction, the site would be under impervious surfaces or would be restored with landscaping,

incorporating designed infrastructure to enable functional site drainage during a storm event. During operation all runoff generated on campus would be subject to the Municipal Regional Stormwater NPDES Permit. As a result, impacts would be less than significant.

- c.iv) **No Impact.** The SJCC campus is not in a special flood hazard area. According to FEMA, the campus is in Zone D, an area designated as one with undetermined flood hazards (FEMA, 2009). As noted above, storm water generated by future development under the SJCC FMP would be directed toward existing storm drainage facilities serving the campus. Consequently, the SJCC FMP would not impede or redirect flood flows. There would be no impact.
- d) **No Impact.** As stated previously, the project is not located in a flood hazard area, thus there is no risk for release of pollutants from this hazard. The campus is more than 12 miles southeast of the San Francisco Bay, and not in a tsunami or seiche inundation zone. There would be no impact associated with this criterion.
- e) **Less than Significant Impact.** With adherence to the terms and conditions specified in the Construction General Permit and implementation of the BMPs in the project-specific SWPPP, the risk of water quality contamination attributable to the project's construction activity would be greatly reduced. Compliance with the MRP and LID requirements would reduce the risk of water quality violations during operations. Therefore, the SJCC FMP would not conflict with the objectives of the Water Quality Control Plan for the San Francisco Bay Basin (Basin Plan). The SJCC FMP would be implemented in a manner that would not substantially affect groundwater recharge or otherwise conflict with the Santa Clara Valley Groundwater Sustainability Plan. Impacts would be less than significant.

Land Use and Planning

<i>Issues (and Supporting Information Sources):</i>	<i>Potentially Significant Impact</i>	<i>Less Than Significant with Mitigation Incorporated</i>	<i>Less Than Significant Impact</i>	<i>No Impact</i>
XI. LAND USE AND PLANNING — Would the project:				
a) Physically divide an established community?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
b) Cause a significant environmental impact due to a conflict with any land use plan, policy, or regulation adopted for the purpose of avoiding or mitigating an environmental effect?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>

Discussion

- a) **Less than Significant Impact.** The proposed SJCC FMP would occur on an already existing campus and is in an already established urban setting. The SJCC FMP would include the construction of new buildings; the renovation of existing buildings and facilities; demolition of some existing structures; improvements to vehicular and pedestrian access and circulation systems; and open space improvements at the campus. These features would impede any existing travel within and through the campus or restrict connection to the surrounding neighborhoods. Therefore, the SJCC FMP would not physically divide an established community, and there would be a less than significant impact to land use and planning.
- b) **Less than Significant Impact.** There are no SJECCD planning documents for which the SJCC FMP would be considered incompatible with.

The SJECCD is not subject to local plans, policies, or regulations, including the land use controls of the Envision San José 2040 General Plan or City's zoning ordinance. Nevertheless, the SJCC campus has considered these sources in developing the SJCC FMP. The existing Envision San José 2040 General Plan land use designation for the majority of the campus is Public/Quasi-Public (P/QP). the P/QP designation allows public land uses, including schools, colleges, libraries, fire stations, and auditoriums; and some private land uses, including private schools. The proposed changes on the campus under the SJCC FMP would be consistent with this designation. A small area of the campus, which contains the Technology Center building, is designated as Urban Village Commercial (UVC). However, renovations to the Technology Center building would not change the programmable square feet or educational uses within that structure. Therefore, the would not be a change to the existing SJECCD uses within the UVC land use designation.

The existing City of San José land use zoning for the majority of the campus is Single-Family Residential (R-1-8). The R-1-8 zoning district is applied to areas appropriate for single-family residential uses up to eight dwelling units per acre. While the R-1-8 zoning district is not consistent with the Public/Quasi-Public land use designation of the General Plan, the existing use of the proposed project site is for the SJCC campus as a Public/Quasi-Public use which is consistent, and the proposed uses at the project site would align with the existing uses. Smaller portions of the campus are zoned as

Commercial Pedestrian (CP) and Planned Development (PD). The portion of the campus within the CP zone is the extension of Kingman Avenue from South Bascom Avenue to the west side of the SJCC campus. No change is proposed for this segment pursuant to the proposed project. The section of the campus within the Planned Development zone is the Technology Center building, which would only be subject to internal renovation of existing areas used for educational purposes. There would be no change in the amount of space used for educational uses within the Planned Development zone.

The SJCC FMP does not propose land uses that are substantially incompatible with existing or planned land uses adjacent to the SJCC campus. Surrounding land uses would continue to exist adjacent to a fully developed campus that would be generally similar to that which currently exist. Further, there is no adopted specific plan, community plan, Habitat Conservation Plan or Natural Community Conservation Plan that apply to the campus.

Based on the above discussion, there would not be a significant conflict of the SJCC FMP with any land use plan, policy, or regulation adopted for the purpose of avoiding or mitigating an environmental effect, and there would be a less than significant impact to land use and planning from the proposed project.

Mineral Resources

<i>Issues (and Supporting Information Sources):</i>	<i>Potentially Significant Impact</i>	<i>Less Than Significant with Mitigation Incorporated</i>	<i>Less Than Significant Impact</i>	<i>No Impact</i>
XII. MINERAL RESOURCES — Would the project:				
a) Result in the loss of availability of a known mineral resource that would be of value to the region and the residents of the state?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
b) Result in the loss of availability of a locally-important mineral resource recovery site delineated on a local general plan, specific plan, or other land use plan?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>

Environmental Setting

Pursuant to the Surface Mining and Reclamation Act of 1975 (SMARA), the State Mining and Geology Board has identified the Communications Hill Area (Sector EE) as containing mineral deposits of regional significance for aggregate (City of San José, 2020).

The SJCC campus is located outside of the Communications Hill Area and does not have mineral deposits subject to SMARA.

Discussion

- a-b) **No Impact.** The SJCC Campus is not in an area with a known mineral resource valuable to the region or state, nor is the campus within a known mineral resource recovery area (City of San José, 2020). The Communications Hill Area, containing mineral deposits of regional significance, is located approximately 4.20 miles southeast of the SJCC campus. Implementation of the SJCC FMP would not interfere with future mining activities or result in the loss of availability of a known mineral resource. Therefore, there would be no impact to mineral resources.

Noise

<i>Issues (and Supporting Information Sources):</i>	<i>Potentially Significant Impact</i>	<i>Less Than Significant with Mitigation Incorporated</i>	<i>Less Than Significant Impact</i>	<i>No Impact</i>
XIII. NOISE — Would the project result in:				
a) Generation of a substantial temporary or permanent increase in ambient noise levels in the vicinity of the project in excess of standards established in the local general plan or noise ordinance, or applicable standards of other agencies?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
b) Generation of excessive ground borne vibration or ground borne noise levels?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
c) For a project located within the vicinity of a private airstrip or an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, would the project expose people residing or working in the project area to excessive noise levels?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>

Discussion

- a-c) **Potentially Significant Impact.** The proposed project would include construction and operation of education-related uses, expanding the capacity of existing education uses within the SJCC campus. Construction and operation of the proposed project may generate noise and vibration that could adversely affect nearby sensitive receptors, resulting in a potentially significant impact. For this reason, impacts related to noise and vibration will be analyzed in the EIR.

Population and Housing

<i>Issues (and Supporting Information Sources):</i>	<i>Potentially Significant Impact</i>	<i>Less Than Significant with Mitigation Incorporated</i>	<i>Less Than Significant Impact</i>	<i>No Impact</i>
XIV. POPULATION AND HOUSING — Would the project:				
a) Induce substantial unplanned population growth in an area, either directly (for example, by proposing new homes and businesses) or indirectly (for example, through extension of roads or other infrastructure)?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
b) Displace substantial numbers of existing people or housing, necessitating the construction of replacement housing elsewhere?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>

Discussion

- a) **No Impact.** The SJCC campus does not currently support housing for students, faculty, or staff, and the implementation of the proposed SJCC FMP would not result in an increase in population growth or result in the addition of on-site housing. Furthermore, any proposed utility improvements that would occur pursuant to implementation of the SJCC FMP are intended to only serve the proposed project. Consequently, the SJCC FMP would not induce substantial unplanned growth either directly or indirectly.
- b) **No Impact.** The SJCC campus is not currently developed with residential uses, and no housing is present on the campus. As such, the SJCC FMP would not displace existing housing or people such that the construction of replacement housing would be required.

Public Services

<i>Issues (and Supporting Information Sources):</i>	<i>Potentially Significant Impact</i>	<i>Less Than Significant with Mitigation Incorporated</i>	<i>Less Than Significant Impact</i>	<i>No Impact</i>
XV. PUBLIC SERVICES —				
a) Would the project result in substantial adverse physical impacts associated with the provision of new or physically altered governmental facilities, need for new or physically altered governmental facilities, the construction of which could cause significant environmental impacts, in order to maintain acceptable service ratios, response times or other performance objectives for any of the following public services:				
i) Fire protection?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
ii) Police protection?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
iii) Schools?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
iv) Parks?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
v) Other public facilities?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>

Environmental Settings

Public services are those that are intended to serve and provide benefits to a community's welfare and livability. Public services include fire and police protection, schools, parks, and other public facilities (i.e., recreational facilities, hospitals, etc.). Additional discussion and analysis of public services may be found in Section XVI, *Recreation*, Section XIX, *Utilities and Service Systems*, and Section XX, *Wildfire*.

Fire Protection Services

The SJCC campus is located at 2100 Moorpark Avenue in Central San José. The San José Fire Department (SJFD) provides fire protection services to the City of San José, including the SJCC campus. The SJFD has 30 Public Safety Radio Dispatchers, 11 Senior Public Safety Dispatchers, 3 Supervising Public Safety Dispatchers and 1 Senior Office Specialist. Equipment teams deployed by the SJFD includes 32 engine companies, nine truck companies, an Urban Search and Rescue (USAR) company, a Hazardous Incident Team (HIT), Aircraft Rescue Fire Fighting (ARFF) personal and equipment, and five transport-capable ALS Squads (City of San José, 2019 and SJFD, 2016). The SJFD maintains 33 fire stations (SJFD, 2020). SJFD No. 4 is the primary response unit for the campus, and responds to all fire protection service calls. Station 4 is located directly across the campus' entry on the east side of Leigh at 740 Leigh Avenue, and has one engine company equipped with a fire hose.

The SJFD responded to approximately 91,900 incidents within its service area in the fiscal year of 2018-2019 (City of San José, 2019). Of the total, 7 percent were fires (3,100 total), 63 percent were medical emergencies (57,500 total), and 34 percent were other types of incidents (i.e., good intent calls, rescues, and false alarms) (31,000 total). The SJFD responded to 74 percent of Priority I incidents within its time standard of eight minutes, and 92 percent of Priority 2 incidents within 13 minutes.

Police Protection Services

Police services are provided to the SJCC campus by the SJECCD Police Department, through on-site campus police stations. The SJECCD maintains a mutual aid policy with the San José Police Department (SJPd) to provide assistance for after-hour incidents and in situations the SJECCD Police Department does not have the proper equipment, expertise, and/or staffing (SJECCD, 2019).

The SJCC is patrolled whenever classes are in session, Monday through Saturday 7:00 AM to 11:00 PM. The SJCC police station is closed Saturdays, Sundays and holidays; however, the Dispatch Center at Evergreen Community College provides assistance during those times and days, typically Monday through Saturday 7:00 AM to 11:00 PM, Sundays 7:00 AM to 3:00 PM, and 8:00 AM to 4:00 PM during holidays.

The existing SJCC Police Department is located on campus in the Student Center SC-10 building. The station is open Monday through Friday 7:00 AM to 3:00 PM. Outside of the hours of operation for the SJECCD Dispatch Center, the SJPd is responsible for emergencies on campus when notified.

Public Schools and Libraries

The City of San José has 15 school districts that provide 240 schools (City of San José, 2019). The closest school to the campus is Sherman Oaks Elementary School located approximately 0.1 miles south of the campus.

The City of San José's public library has 23 branches located throughout the city. The SJECCD's Cesar E. Chavez Library is located on SJCC campus and is open Monday through Thursday 8:30 AM to 8:00 PM and Friday 8:30 AM to 2:00 PM. The closest public library not part of the SJECCD is the Bascom Branch Library, located approximately 0.53 miles southwest of the SJCC campus.

Other Public Services

As mentioned above, the City of San Jose provides public services such as education, libraries, health care, public safety (police and fire), and emergency management (City of San José, 2020).

Discussion

- a.i-iv) **Less Than Significant Impact.** As discussed in the Environmental Setting, the SJCC currently receives fire protection and emergency medical services from the SJFD. Implementation of the SJCC 2030 EMP would introduce an estimated 2,030 students and 22,680 WSCH, a growth of 26 percent by 2030. The increase in campus population under the SJCC FMP would be expected to result in an incremental increase in calls. However, it is not anticipated that the need for new facilities would be needed in excess of those currently planned.

As discussed above, the SJECCD Police Department provides law enforcement services on the SJCC campus with the SJPd providing additional services to the campus when needed. As discussed above, implementation of the SJCC FMP would increase the

campus population which could result in an incremental increase to additional calls for service. However, as discussed in the 2011 San José General Plan Final EIR, while the increase in calls for service may require the need for expansion of existing police facilities or the location of new facilities within planned growth areas, the construction of these facilities is not anticipated to have significant impacts.

The SJECDD's existing library on campus is expected to serve the needs of the campus population under the SJCC FMP. Furthermore, the SJCC FMP does not include any residential development or uses that would directly impact public libraries or other public services within the area due to an increase growth in population.

Implementation of the SJCC FMP would include circulation improvements that would facilitate emergency and service vehicle access to the core of the SJCC campus. The SJCC FMP does propose any actions that would result in residential development or uses. New students, faculty, and staff associated with the SJCC FMP would likely be living in the surrounding communities or Bay Area at the time of enrollment or hire. To the extent that new students or employees move into Bay Area communities to study or work at the college, their numbers would not be large and would not add a substantial number of school age students to any one community. Therefore, implementation of the SJCC FMP would not include changes that would result in the need for any new or expanded public service (i.e., new schools, parks, fire or police stations) nor would implementation effect response times or otherwise impact public services. Impacts to public services would be less than significant.

Recreation

<i>Issues (and Supporting Information Sources):</i>	<i>Potentially Significant Impact</i>	<i>Less Than Significant with Mitigation Incorporated</i>	<i>Less Than Significant Impact</i>	<i>No Impact</i>
XVI. RECREATION —				
a) Would the project increase the use of existing neighborhood and regional parks or other recreational facilities such that substantial physical deterioration of the facility would occur or be accelerated?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
b) Does the project include recreational facilities or require the construction or expansion of recreational facilities which might have an adverse physical effect on the environment?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>

Environmental Settings

There are 180 neighborhood/community parks and 9 regional parks within the City of San José (City of San José, 2011). These parks make up an existing 3,434 acres of regional and neighborhood/community serving parkland that vary in size and amenities.

The SJCC campus contains existing recreational facilities such as a drama theater, auditorium, Cesar E. Chavez Library; sports-related recreation facilities including basketball gymnasium, baseball field, and soccer and multi-use fields; and other open spaces within the campus boundaries.

Discussion

- a-b) **Less Than Significant Impact.** Implementation of the SJCC FMP would result in the development of a hierarchy of open spaces ranging from large, active, formal and informal gather spaces to smaller, intimate, and purpose-built spaces. The SJCC FMP could also result in the creation of pedestrian nodes or places that would assist in wayfinding, together with seating, and opportunities for informal meetings and gatherings.

Given the existing recreational facilities on the SJCC campus and within the surrounding area, implementation of the any additional open space under the SJCC FMP would not result in the increase use of existing neighborhood and regional parks or other recreational facilities that would result in substantial physical deterioration of those facilities. Implementation of the proposes SJCC FMP would result in an increase in population (i.e., an estimated 4,812 students and correlating 139,421 WSCH, a growth of 44 percent by 2030). However, population growth resulting from the proposed SJCC FMP would be accounted for by the proposed open spaces and is not anticipated to result in significant environmental impacts. Therefore, impacts on recreational resources would be less than significant.

References

City of San José. 2011. DEIR for the Envision San José 2040 General Plan. State Clearinghouse Number 2009072096. <https://www.sanjoseca.gov/your-government/departments/planning->

building-code-enforcement/planning-division/environmental-planning/environmental-review/completed-eirs/envision-san-jose-2040-general-plan-4-year/envision-san-jos-2040-general-plan. Accessed August 17, 2020.

Transportation

<i>Issues (and Supporting Information Sources):</i>	<i>Potentially Significant Impact</i>	<i>Less Than Significant with Mitigation Incorporated</i>	<i>Less Than Significant Impact</i>	<i>No Impact</i>
XVII. TRANSPORTATION — Would the project:				
a) Conflict with a program plan, ordinance or policy addressing the circulation system, including transit, roadway, bicycle and pedestrian facilities?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
b) Would the project conflict or be inconsistent with CEQA Guidelines section 15064.3, subdivision (b)?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
c) Substantially increase hazards due to a geometric design feature (e.g., sharp curves or dangerous intersections) or incompatible uses (e.g., farm equipment)?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
d) Result in inadequate emergency access?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>

Discussion

- a-d) **Potentially Significant Impact.** The proposed implementation of the SJCC FMP would include the renovation and demolition of existing structures, construction of new structures, and construction of new utilities and transportation facilities, all of which would serve education-related purposes. All of the proposed uses for the proposed project would generate traffic to and from the project site as well as construction traffic during project construction. The EIR will evaluate the potential for development under the proposed SJCC FMP to conflict with programs, plans, ordinances, and policies addressing the circulation system, including transit, roadway, bicycle and pedestrian facilities. This increase in vehicle trips under the SJCC FMP would in turn increase the total amount of vehicle miles traveled (VMT) to and from the campus. The EIR will evaluate the potential for development under the proposed SJCC FMP to conflict or be inconsistent with CEQA Guidelines section 15064.3, subdivision (b). Although development under the proposed SJCC FMP is not expected to include hazardous roadway design features or incompatible uses, the potential for impacts related to site access will be evaluated in the EIR. Furthermore, although development under the proposed SJCC FMP is not expected to result in inadequate emergency access, this issue will be evaluated in the EIR.

Tribal Cultural Resources

<i>Issues (and Supporting Information Sources):</i>	<i>Potentially Significant Impact</i>	<i>Less Than Significant with Mitigation Incorporated</i>	<i>Less Than Significant Impact</i>	<i>No Impact</i>
XVIII. TRIBAL CULTURAL RESOURCES —				
a) Would the project cause a substantial adverse change in the significance of a tribal cultural resource, defined in Public Resources Code section 21074 as either a site, feature, place, cultural landscape that is geographically defined in terms of the size and scope of the landscape, sacred place, or object with cultural value to a California Native American tribe, and that is:				
i) Listed or eligible for listing in the California Register of Historical Resources, or in a local register of historical resources as defined in Public Resources Code Section 5020.1(k), or	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
ii) A resource determined by the lead agency, in its discretion and supported by substantial evidence, to be significant pursuant to criteria set forth in subdivision (c) of Public Resources Code Section 5024.1. In applying the criteria set forth in subdivision (c) of Public Resources Code Section 5024.1, the lead agency shall consider the significance of the resource to a California Native American tribe.	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>

Discussion

- a.i, ii) **Less than Significant with Mitigation Incorporated.** CEQA requires the lead agency to consider the effects of a project on tribal cultural resources. As defined in PRC Section 21074, tribal cultural resources are sites, features, places, cultural landscapes, sacred places, and objects with cultural value to a California Native American tribe that are listed, or determined to be eligible for listing, on the national, state, or local register of historical resources.

ESA contacted the California State Native American Heritage Commission (NAHC) on July 15, 2020 to request a search of the NAHC's Sacred Lands File and a list of Native American representatives who may have knowledge of tribal cultural resources in the project area, or interest in the project. The NAHC replied to ESA by email on July 16, 2020, with the statement that the Sacred Lands File has no record of any sacred sites within the project area. The NAHC response included a list of six Native American representatives from six tribes who may have knowledge of tribal cultural resources in the project area, or be interested in the proposed SJCC FMP.

On July 23, 2020, SJECCD sent letters to six Native American tribal organizations who were identified by the NAHC in their response to the Sacred Lands File request. No tribal organizations responded to the request.

Based on the Northwest Information Center records search (described in Section V. Cultural Resources) and the NAHC SLF negative search results, there are no known tribal cultural resources listed or determined eligible for listing in the California Register of Historical Resources, or included in a local register of historical resources as defined

in PRC Section 5020.1(k), pursuant to PRC Section 21074(a)(1), would be affected by the proposed SJCC FMP. To date, no new tribal cultural resources have been identified by Native American representatives, and surface survey of the campus identified no potential tribal cultural resources. In addition, the SJECCD did not determine any resource that could potentially be affected by the project to be a significant tribal cultural resource pursuant to criteria set forth in PRC Section 5024.1(c). However, if any previously unrecorded archaeological resource were identified during project implementation, particularly ground-disturbing construction activities, and were found to qualify as a tribal cultural resource pursuant to PRC Section 21074(a)(2) (determined by the lead agency to be significant pursuant to criteria set forth in PRC Section 5024.1[c]), any impacts to the resource resulting from the project could be potentially significant. Any such potential significant impacts would be reduced to a less than significant level by implementing Mitigation Measures CUL-1 and CUL-2.

References

Northwest Information Center (NWIC), File No. 20-0118. California Historical Resources Information System at Sonoma State University, Rohnert Park. On file at ESA, July 27, 2020.

Utilities and Service Systems

<i>Issues (and Supporting Information Sources):</i>	<i>Potentially Significant Impact</i>	<i>Less Than Significant with Mitigation Incorporated</i>	<i>Less Than Significant Impact</i>	<i>No Impact</i>
XIX. UTILITIES AND SERVICE SYSTEMS — Would the project:				
a) Require or result in the relocation or construction of new or expanded water, wastewater treatment or storm water drainage, electric power, natural gas, or telecommunications facilities, the construction or relocation of which could cause significant environmental effects?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
b) Have sufficient water supplies available to serve the project and reasonably foreseeable future development during normal, dry and multiple dry years?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
c) Result in a determination by the wastewater treatment provider which serves or may serve the project that it has adequate capacity to serve the project's projected demand in addition to the provider's existing commitments?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
d) Generate solid waste in excess of State or local standards, or in excess of the capacity of local infrastructure, or otherwise impair the attainment of solid waste reduction goals?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
e) Comply with federal, state, and local management and reduction statutes and regulations related to solid waste?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>

Environmental Settings

San José Water Company supplies and delivers potable water (sourced from Santa Clara Valley Water District [SCVWD]) to the SJCC campus through waster distribution lines in the surrounding streets. Wastewater generated on campus is discharged to City of San José wastewater collection lines, and conveyed to and treated at the San José/Santa Clara Water Pollution Control Plant (WPCP). The campus is served by City of San José stormwater infrastructure, which is maintained by the City of San José. Pacific Gas and Electric (PG&E) provides electricity and natural gas to the campus. Solid waste generated on the campus is collected by a private hauler and is disposed at any of four privately owned landfills in San José or at other landfills outside the County. Landfills serving the City include Kirby Canyon, Newby Island, Zanker Road, and Zanker Materials Processing Facility.

Discussion

- a) **Less than Significant Impact.** Additional growth and development that would occur under the SJCC FMP would increase demand for potable water (this issue is addressed under checklist item b, below for water supply); increase wastewater generation and need for wastewater treatment (this issue is addressed in checklist item c, below); contribute to stormflows to stormwater collection facilities (please refer to Section X, Hydrology and Water Quality for additional detail); and generate an increase in demand for electricity and natural gas service, and telecommunications.

New facilities developed on the campus under the SJCC FMP would be connected as needed to potable water distribution lines in the proximity of the campus. No substantial relocation or construction of new or expanded off-site water distribution lines would be expected to serve new development under the SJCC FMP.

Minor upgrades to the existing stormwater drainage infrastructure within the campus may also be implemented during construction. Stormwater flows would be directed to existing drainage infrastructure in the proximity of the campus. As discussed in Section X, implementation of the SJCC FMP could increase the volume of stormwater runoff in the City's storm drain system. However, this increase in runoff would be small and would not substantially exceed the capacity of existing or planned downstream stormwater drainage systems. No substantial relocation or construction of new or expanded off-site storm drainage would be expected to serve new development under the SJCC FMP.

The SJCC FMP would also include electrical and natural gas connections to existing infrastructure; however, no substantial relocation or construction of new or expanded off-site electrical/natural gas infrastructure would be required to serve the campus. Similarly, new telecommunications utilities may be provided on-site to serve new development on the campus; however, no substantial off-site telecommunications extensions or new construction is anticipated.

Construction activities associated with these utility improvements described above would have the potential to result in significant or potentially significant impacts. However, compliance with construction-related regulatory requirements, along with identified mitigation measures, discussed in other sections of this Initial Study, and further in the EIR, would reduce construction-related effects associated with utility improvements to a less than significant level. As a result, the impacts associated with the construction of new utilities to serve the campus under the SJCC FMP would be less than significant.

- b) **Potentially Significant Impact.** Water would be required for both construction and operation of the SJCC FMP. During construction, water requirements would consist of non-potable water required for dust control and for other construction purposes, sourced from water tank trucks. Potable water for construction workers would be provided by the construction contractors, as needed, based on the number of construction workers each day. The small increase in potable water demand during construction would not be substantial and the short-term spikes in water use can be accommodated; and accordingly construction related non-potable demands for water would be less than significant.

During operation, the SJCC FMP would result in an increase in demand for potable water on campus. The SJCC FMP EIR will evaluate whether there the SJWC would have sufficient water supplies to serve the projected campus development under the SJCC FMP and reasonably foreseeable future development during normal, dry, and multiple dry years.

- c) **Potentially Significant Impact.** Implementation of the SJCC FMP would result in an increase in generation of wastewater generation that would require treatment at the WPCP. The SJCC FMP EIR will evaluate whether the WPCP has adequate capacity to

serve projected demand under the proposed SJCC FMP, in addition to current and future demands.

- d-e) **Potentially Significant Impact.** The SJCC FMP EIR will evaluate whether solid waste providers have the capacity to serve development under the proposed SJCC FMP in addition to current and future demands. In addition, the SJCC FMP EIR will evaluate whether the proposed project would conflict with federal, State, and local management and reduction statutes and regulations related to solid waste.
-

Wildfire

<i>Issues (and Supporting Information Sources):</i>	<i>Potentially Significant Impact</i>	<i>Less Than Significant with Mitigation Incorporated</i>	<i>Less Than Significant Impact</i>	<i>No Impact</i>
XX. WILDFIRE — If located in or near state responsibility areas or lands classified as very high fire hazard severity zones, would the project:				
a) Substantially impair an adopted emergency response plan or emergency evacuation plan?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
b) Due to slope, prevailing winds, and other factors, exacerbate wildfire risks, and thereby expose project occupants to, pollutant concentrations from a wildfire or the uncontrolled spread of a wildfire?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
c) Require the installation or maintenance of associated infrastructure (such as roads, fuel breaks, emergency water sources, power lines or other utilities) that may exacerbate fire risk or that may result in temporary or ongoing impacts to the environment?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
d) Expose people or structures to significant risks, including downslope or downstream flooding or landslides, as a result of runoff, post-fire slope instability, or drainage changes?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>

Environmental Setting

Wildfire is an outcome of several variables, primarily weather (temperature, humidity, and wind), vegetation, topography, and human influences, which combine to produce regional and local severity zones. The City of San José is located in a Local Responsibility Area (LRA) that is within an incorporated area. In addition, as discussed under Section IX, Hazards and Hazardous Materials, topic g) above, the SJCC campus is not located within or in the vicinity of, a high fire hazard area. Consequently, no significant impacts would be associated with the proposed SJCC FMP as it relates to wildfire.

Discussion

- a-c) **Less than Significant Impact.** As discussed under Section IX, topic f), above, the project design review process, and continued implementation of emergency response and evaluation practices and systems during operation of SJCC FMP, would be sufficient to ensure that possible impairment of any emergency response or evacuation plans would be considered a less than significant impact.

Implementation of the SJCC FMP would not include any residential structures, therefore would not have any permanent occupants. Construction activities that could result from the SJCC FMP would require the use of vehicles and equipment that could lead to a minor increase in the risk of ignition, which could ignite a fire in an area with flammable vegetation or material. However, the risk of igniting a wildfire would be low because construction would take place in an incorporated area that does not contain substantial flammable vegetation. Operation of constructed or modified buildings would not involve activities that could introduce wildfire risk. Therefore, this impact would be less than

significant. Similarly, the SJCC FMP would include not include any infrastructure improvements that exacerbate the potential for wildfire risks.

- d) **No Impact.** The SJCC campus is located in an area that is relatively level, and consequently, construction of improvements and operation under SJCC FMP would not expose people or structures to significant risks, including downslope or downstream flooding or landslides, as a result of runoff, post-fire slope instability, or drainage changes.

Mandatory Findings of Significance

<i>Issues (and Supporting Information Sources):</i>	<i>Potentially Significant Impact</i>	<i>Less Than Significant with Mitigation Incorporated</i>	<i>Less Than Significant Impact</i>	<i>No Impact</i>
XXI. MANDATORY FINDINGS OF SIGNIFICANCE —				
a) Does the project have the potential to substantially degrade the quality of the environment, substantially reduce the habitat of a fish or wildlife species, cause a fish or wildlife population to drop below self-sustaining levels, threaten to eliminate a plant or animal community, substantially reduce the number or restrict the range of a rare or endangered plant or animal or eliminate important examples of the major periods of California history or prehistory?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
b) Does the project have impacts that are individually limited, but cumulatively considerable? ("Cumulatively considerable" means that the incremental effects of a project are considerable when viewed in connection with the effects of past projects, the effects of other current projects, and the effects of probable future projects)?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
c) Does the project have environmental effects which will cause substantial adverse effects on human beings, either directly or indirectly?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>

Discussion

- a) **Potentially Significant Impact.** With the incorporation of mitigation measures, the proposed SJCC FMP would not degrade the quality of the environment, substantially reduced the habitat of fish or wildlife species, cause a fish or wildlife population to drop below self-sustaining levels, or threaten to eliminate a plant or animal community. In addition, the proposed SJCC FMP would not eliminate important examples of California prehistory. However, the proposed project could negatively impact historic aged structures that may be determined to be of historic importance. This topic will be addressed further in the EIR. For the purposes of this initial study, these potential impacts to cultural resources are considered significant.

- b) **Potentially Significant Impact.** The analysis in this Initial Study demonstrates there would be no project-specific or cumulative significant and unavoidable impacts to agricultural and forestry resources, aesthetics, biological resources, geology and soils, hazards and hazardous materials, hydrology and water quality, land use and planning, population and housing, public services, recreation, tribal cultural resources, or wildfire.

Potential cumulative significant impacts to air quality, cultural resources, energy, greenhouse gas emissions, noise and vibration, transportation, and utilities and service systems will be analyzed in an EIR. For the purposes of this initial study, those potential cumulative impacts are considered potentially significant.

- c) **Potentially Significant Impact.** The proposed project would not have significant adverse effects to humans related to the issue areas addressed in this Initial Study. The EIR will include analysis of air quality, cultural resources, energy, greenhouse gas emissions,

noise and vibration, and transportation. For the purposes of this Initial Study, those potential impacts to human beings are considered potentially significant.

Consultation Code: 08ESMF00-2020-SLI-2600

Event Code: 08ESMF00-2020-E-07984

Project Name: San José City College

Subject: List of threatened and endangered species that may occur in your proposed project location, and/or may be affected by your proposed project

To Whom It May Concern:

The enclosed species list identifies threatened, endangered, proposed and candidate species, as well as proposed and final designated critical habitat, under the jurisdiction of the U.S. Fish and Wildlife Service (Service) that may occur within the boundary of your proposed project and/or may be affected by your proposed project. The species list fulfills the requirements of the Service under section 7(c) of the Endangered Species Act (Act) of 1973, as amended (16 U.S.C. 1531 *et seq.*).

Please follow the link below to see if your proposed project has the potential to affect other species or their habitats under the jurisdiction of the National Marine Fisheries Service:

http://www.nwr.noaa.gov/protected_species/species_list/species_lists.html

New information based on updated surveys, changes in the abundance and distribution of species, changed habitat conditions, or other factors could change this list. Please feel free to contact us if you need more current information or assistance regarding the potential impacts to federally proposed, listed, and candidate species and federally designated and proposed critical habitat. Please note that under 50 CFR 402.12(e) of the regulations implementing section 7 of the Act, the accuracy of this species list should be verified after 90 days. This verification can be completed formally or informally as desired. The Service recommends that verification be completed by visiting the ECOS-IPaC website at regular intervals during project planning and implementation for updates to species lists and information. An updated list may be requested through the ECOS-IPaC system by completing the same process used to receive the enclosed list.

The purpose of the Act is to provide a means whereby threatened and endangered species and the ecosystems upon which they depend may be conserved. Under sections 7(a)(1) and 7(a)(2) of the Act and its implementing regulations (50 CFR 402 *et seq.*), Federal agencies are required to utilize their authorities to carry out programs for the conservation of threatened and endangered species and to determine whether projects may affect threatened and endangered species and/or designated critical habitat.

A Biological Assessment is required for construction projects (or other undertakings having similar physical impacts) that are major Federal actions significantly affecting the quality of the human environment as defined in the National Environmental Policy Act (42 U.S.C. 4332(2)(c)). For projects other than major construction activities, the Service suggests that a biological evaluation similar to a Biological Assessment be prepared to determine whether the project may affect listed or proposed species and/or designated or proposed critical habitat. Recommended contents of a Biological Assessment are described at 50 CFR 402.12.

If a Federal agency determines, based on the Biological Assessment or biological evaluation, that listed species and/or designated critical habitat may be affected by the proposed project, the agency is required to consult with the Service pursuant to 50 CFR 402. In addition, the Service recommends that candidate species, proposed species and proposed critical habitat be addressed within the consultation. More information on the regulations and procedures for section 7 consultation, including the role of permit or license applicants, can be found in the "Endangered Species Consultation Handbook" at:

<http://www.fws.gov/endangered/esa-library/pdf/TOC-GLOS.PDF>

Please be aware that bald and golden eagles are protected under the Bald and Golden Eagle Protection Act (16 U.S.C. 668 *et seq.*), and projects affecting these species may require development of an eagle conservation plan (http://www.fws.gov/windenergy/eagle_guidance.html). Additionally, wind energy projects should follow the wind energy guidelines (<http://www.fws.gov/windenergy/>) for minimizing impacts to migratory birds and bats.

Guidance for minimizing impacts to migratory birds for projects including communications towers (e.g., cellular, digital television, radio, and emergency broadcast) can be found at: <http://www.fws.gov/migratorybirds/CurrentBirdIssues/Hazards/towers/towers.htm>; <http://www.towerkill.com>; and <http://www.fws.gov/migratorybirds/CurrentBirdIssues/Hazards/towers/comtow.html>.

We appreciate your concern for threatened and endangered species. The Service encourages Federal agencies to include conservation of threatened and endangered species into their project planning to further the purposes of the Act. Please include the Consultation Tracking Number in the header of this letter with any request for consultation or correspondence about your project that you submit to our office.

Project Summary

Consultation Code: 08ESMF00-2020-SLI-2600

Event Code: 08ESMF00-2020-E-07984

Project Name: San José City College

Project Type: DEVELOPMENT

Project Description: The San José City College campus is located at 2100 Moorpark Avenue in central San José in Santa Clara County. The campus encompasses approximately 61 acres. Facility recommendations contained in the 2030 Facility Master Plan include demolition and removal of existing buildings on the campus; the construction of new buildings and the renovation of existing buildings and facilities to meet the future program needs; improvements to vehicular and pedestrian access and circulation systems; expansion of parking facilities and capacity; and open space improvements.

Project Location:

Approximate location of the project can be viewed in Google Maps: <https://www.google.com/maps/place/37.314152162499N121.92713997586236W>

Counties: Santa Clara, CA

Endangered Species Act Species

There is a total of 8 threatened, endangered, or candidate species on this species list.

Species on this list should be considered in an effects analysis for your project and could include species that exist in another geographic area. For example, certain fish may appear on the species list because a project could affect downstream species.

IPaC does not display listed species or critical habitats under the sole jurisdiction of NOAA Fisheries¹, as USFWS does not have the authority to speak on behalf of NOAA and the Department of Commerce.

See the "Critical habitats" section below for those critical habitats that lie wholly or partially within your project area under this office's jurisdiction. Please contact the designated FWS office if you have questions.

-
1. [NOAA Fisheries](#), also known as the National Marine Fisheries Service (NMFS), is an office of the National Oceanic and Atmospheric Administration within the Department of Commerce.

Birds

NAME	STATUS
California Clapper Rail <i>Rallus longirostris obsoletus</i> No critical habitat has been designated for this species. Species profile: https://ecos.fws.gov/ecp/species/4240	Endangered
California Least Tern <i>Sterna antillarum browni</i> No critical habitat has been designated for this species. Species profile: https://ecos.fws.gov/ecp/species/8104	Endangered

Amphibians

NAME	STATUS
California Red-legged Frog <i>Rana draytonii</i> There is final critical habitat for this species. Your location is outside the critical habitat. Species profile: https://ecos.fws.gov/ecp/species/2891 Species survey guidelines: https://ecos.fws.gov/ipac/guideline/survey/population/205/office/11420.pdf	Threatened
California Tiger Salamander <i>Ambystoma californiense</i> Population: U.S.A. (Central CA DPS) There is final critical habitat for this species. Your location is outside the critical habitat. Species profile: https://ecos.fws.gov/ecp/species/2076	Threatened

Fishes

NAME	STATUS
Delta Smelt <i>Hypomesus transpacificus</i> There is final critical habitat for this species. Your location is outside the critical habitat. Species profile: https://ecos.fws.gov/ecp/species/321	Threatened

Insects

NAME	STATUS
Bay Checkerspot Butterfly <i>Euphydryas editha bayensis</i> There is final critical habitat for this species. Your location is outside the critical habitat. Species profile: https://ecos.fws.gov/ecp/species/2320	Threatened
San Bruno Elfin Butterfly <i>Callophrys mossii bayensis</i> There is proposed critical habitat for this species. The location of the critical habitat is not available. Species profile: https://ecos.fws.gov/ecp/species/3394	Endangered

Flowering Plants

NAME	STATUS
Robust Spineflower <i>Chorizanthe robusta</i> var. <i>robusta</i> There is final critical habitat for this species. Your location is outside the critical habitat. Species profile: https://ecos.fws.gov/ecp/species/9287	Endangered

Critical habitats

THERE ARE NO CRITICAL HABITATS WITHIN YOUR PROJECT AREA UNDER THIS OFFICE'S JURISDICTION.

Questions and Comments

rareplants@cnps.org

**NOTICE OF PREPARATION OF AN
ENVIRONMENTAL IMPACT REPORT
FOR THE
San José City College Facilities Master Plan**

**To: Public Agencies and Concerned
Citizens/Interested Parties**

**From: San José Evergreen Community
College District
40 S. Market Street
San José, CA 95113**

Lead Agency/Project Proponent: San José Evergreen Community College District

Notice: Notice is hereby given that the San José Evergreen Community College District (SJECCD), acting as Lead Agency under the California Environmental Quality Act (CEQA), is preparing an Environmental Impact Report (EIR) for the Vision 2030 San José City College Facilities Master Plan (SJCC FMP) and other actions and transactions associated with the proposed project. Written comments regarding the issues that should be covered in the EIR, including potential alternatives to the proposed project and the scope of the analysis, are invited. This Notice of Preparation (NOP), and Initial Study, are available on the SJECCD website at: <http://cboc.sjebond.com/program-documents/>

The EIR is being prepared in compliance with CEQA. Under CEQA, upon deciding to prepare an EIR, the SJECCD must issue a NOP to inform trustee agencies, responsible agencies, and the public of that decision. The purpose of the NOP is to provide information describing the project and its potential environmental effects to those who may wish to comment regarding the scope and content of the information to be included in the EIR. Agencies should comment on such information as it relates to their statutory responsibilities in connection with the project.

The EIR will provide an evaluation of potential environmental impacts associated with development of the proposed project. The proposed project description, location, and environmental issue areas that may be affected by development of the proposed project are described below. The EIR will evaluate the potentially significant environmental impacts of the proposed project, on both a direct and cumulative basis, identify mitigation measures that may be feasible to lessen or avoid such impacts, and identify alternatives to the proposed project.

Project Location: The project site is located at:

San José City College
2100 Moorpark Avenue
San José, CA 95128

The SJCC campus is located in an urban setting and is surrounded by a variety of land uses, including commercial uses and Santa Clara Valley Medical Center to the west; a residential neighborhood, senior housing, a San José Fire Department fire station, and a church to the east; a mixed single- and multi-family residential neighborhood to the south; and single-family residential uses to the north across I-280.

Project Description: The SJECCD proposes to construct and implement the SJCC FMP, which would include renovations throughout the SJCC campus, construction of new structures, demolition of certain structure, and upgrades to existing transportation and circulation facilities. A detailed project description is included in the Initial Study referenced in this notice.

Environmental Effects and the Scope of the EIR: The EIR will analyze potentially significant impacts that result from implementation of the proposed project.

As indicated above, the SJECCD has prepared an Initial Study to describe the project and identify any potentially significant project-specific or cumulative environmental effects, as well as, identify any mitigation measures or alternatives that may avoid or mitigate the identified effects, if any, to a less-than-significant level. Based on the findings of the Initial Study, it is anticipated that the following topics could have potentially significant impacts:

- Air Quality
- Historical Resources
- Energy
- Greenhouse Gas Emissions
- Noise
- Transportation
- Utilities and Service Systems

In addition, the EIR will describe and evaluate project alternatives that may reduce or avoid any identified significant adverse impacts of the project. Unless new information is presented during the NOP comment process, the following topics are expected to have less-than-significant impacts and will be discussed only in the Initial Study: aesthetics; archaeological resources; agriculture and forestry resources; biological resources; geology and soils; hazards and hazardous materials; hydrology and water quality; land use and planning; mineral resources; population and housing; public services; recreation; tribal cultural resources; and wildfire.

Address Where Written Comments May be Sent: Comments and suggestions as to the appropriate scope of analysis in the EIR are invited from all interested parties. Written comments or questions concerning the EIR for the proposed project should be directed to the SJECCD at the following address, in writing, by the end of the scoping period, **Friday, November 27, 2020, at 5:00 p.m.** Submit comments by U.S. Mail or E-mail to:

Terrance DeGray, Associate Vice Chancellor, Physical Plant Development and Operations

Architectural Emissions from Renovation

$EF_C / 454(g/lb) \cdot 3.785(L / Gal) / 180(sqft)$

$E_{AC} = EF_{AC} \times F \times A_{paint}$

A_{paint} for non-residential uses = 2 x floor area (sqft)

F = 75% for interior area

25% for exterior area

$EF_{AC} = C_{VOC} / 454 (g/lb) \times 3.785 (L/gal) / 180 (sqft)$

For the renovation areas in Phase 1a and 2c,

Non-residential Interior C_{VOC} = 100 g/L

Non-residential Exterior C_{VOC} = 150 g/L

Interior F x A = 450308 sqft

Exterior F x A 150103 sqft

Interior EF_{AC} = 0.0046

Exterior EF_{AC} = 0.0069

Interior E_{AC} = 2085.68 lbs total for renovated buildings

Exterior E_{AC} = 1042.84 lbs total for renovated buildings

Total VOC = 3128.52 lbs
1.5642594 tons

SOURCE: Office of Environmental Health Hazard Assessment, 2015. *Air Toxics Hot Spots Program Guidance Manual for the Preparation of Health Risk Assessments*. February.

Daily breathing rate for residential receptor is based on the OEHHA 95th percentile moderate intensity breathing rates (OEHHA Table 5.7).

Fraction of time at home is set to values per OEHHA Table 8.4 for residential since the nearest school has an unmitigated cancer risk of <1 per million.

Inhalation cancer potency factor from OEHHA Table 7.1

Hazard Index

Chronic Inhalation	REL	$\mu\text{g}/\text{m}^3$	5
--------------------	-----	--------------------------	---

Intake Factor for Inhalation, IF ($\text{m}^3/\text{kg}\cdot\text{day}$) = $\text{DBR} \cdot \text{FAH} \cdot \text{EF} \cdot \text{ED} \cdot \text{ASF} \cdot \text{A} \cdot \text{CF} / \text{AT}$

SOURCE: Office of Environmental Health Hazard Assessment, 2015. *Air Toxics Hot Spots Program Guidance Manual for the Preparation of Health Risk Assessments*. February.

Daily breathing rate for residential receptor is based on the OEHHA 95th percentile moderate intensity breathing rates (OEHHA Table 5.7).

Fraction of time at home is set to values per OEHHA Table 8.4 for residential since the nearest school has an unmitigated cancer risk of <1 per million.

Inhalation cancer potency factor from OEHHA Table 7.1

Project Characteristics -
http://www.pgecorp.com/corp_responsibility/reports/2019/assets/PGE_CRSR_2019.pdf

Land Use - All structures to be renovated. Site areas as estimated using Google Earth

Construction Phase - Only building construction phase included for renovation.

Off-road Equipment - Phase not included

Off-road Equipment - Phase not included

Off-road Equipment - Phase not included

Off-road Equipment -

Off-road Equipment - Phase not included

Off-road Equipment - Phase not used

Off-road Equipment - Renovation equipment assumed

Off-road Equipment - Renovation equipment assumed

Off-road Equipment - Renovation equipment assumed

Off-road Equipment - Renovation equipment assumed

Off-road Equipment - Renovation equipment assumed

Off-road Equipment - Renovation equipment assumed

Grading - No grading, only interior renovation

Trips and VMT - CalEEMod default of 111 trips was divided proportionately based on bldg areas. Average 1 round trip per day assumed for trucks. Truck trip length assumed to be 25 miles.

Vehicle Trips - Operational emissions not estimated in this run

Energy Use -

Construction Off-road Equipment Mitigation - Tier 4 Final equipment assumed for mitigation of health risk

4.0 Operational Detail - Mobile

Operational emissions not estimated in this run

SJCC FMP - Phase 1b - Santa Clara County, Annual

SJCC FMP - Phase 1b
Santa Clara County, Annual

1.0 Project Characteristics**1.1 Land Usage**

Land Uses	Size	Metric	Lot Acreage	Floor Surface Area	Population
Junior College (2Yr)	122.80	1000sqft	1.10	122,800.00	0

1.2 Other Project Characteristics

Urbanization	Urban	Wind Speed (m/s)	2.2	Precipitation Freq (Days)	58
Climate Zone	4			Operational Year	2025
Utility Company	Pacific Gas & Electric Company				
CO2 Intensity (lb/MW hr)	210	CH4 Intensity (lb/MW hr)	0.029	N2O Intensity (lb/MW hr)	0.006

1.3 User Entered Comments & Non-Default Data

Project Characteristics - <http://www.pgecorp.com/corp_responsibility/reports/2019/assets/PGE_CRSR_2019.pdf>

Land Use - Approximate site area of new CTE building

Construction Phase - Demolition schedule provided by applicant. CalEEMod defaults for new construction adjusted based on construction duration provided by applicant.

Grading - Import/export volumes provide in response to RFI

Demolition - Area of Applied Sciences Building D, as estimated using Google Earth

Vehicle Trips - Operational emissions not estimated in this run

Energy Use -

Construction Off-road Equipment Mitigation - Tier 4 Final equipment assumed for mitigation of health risk

4.0 Operational Detail - Mobile

Operational emissions not estimated in this run

SJCC FMP - Phase 2a - Santa Clara County, Annual

SJCC FMP - Phase 2a
Santa Clara County, Annual

1.0 Project Characteristics**1.1 Land Usage**

Land Uses	Size	Metric	Lot Acreage	Floor Surface Area	Population
Junior College (2Yr)	104.46	1000sqft	2.40	104,461.00	0

1.2 Other Project Characteristics

Urbanization	Urban	Wind Speed (m/s)	2.2	Precipitation Freq (Days)	58
Climate Zone	4			Operational Year	2030
Utility Company	Pacific Gas & Electric Company				
CO2 Intensity (lb/MW hr)	210	CH4 Intensity (lb/MW hr)	0.029	N2O Intensity (lb/MW hr)	0.006

1.3 User Entered Comments & Non-Default Data

Project Characteristics - <http://www.pgecorp.com/corp_responsibility/reports/2019/assets/PGE_CRSR_2019.pdf>

Land Use - Site area as estimated using Google Earth

Construction Phase - Demolition schedule provided by applicant. New construction schedule was estimated using CalEEMod defaults and CTE building schedule and area.

Grading - Import/export volumes provided by applicant

Demolition - Total area of existing Business and GE buildings

Vehicle Trips - Operational emissions not estimated in this run

Energy Use -

Construction Off-road Equipment Mitigation - Tier 4 Final equipment assumed for mitigation of health risk

4.0 Operational Detail - Mobile

Operational emissions not estimated in this run

SJCC FMP - Phase 2b - Santa Clara County, Annual

SJCC FMP - Phase 2b
Santa Clara County, Annual

1.0 Project Characteristics**1.1 Land Usage**

Land Uses	Size	Metric	Lot Acreage	Floor Surface Area	Population
Day-Care Center	15.00	1000sqft	1.00	15,000.00	0
Unenclosed Parking with Elevator	180.00	1000sqft	2.20	180,000.00	0
Recreational Swimming Pool	11.00	1000sqft	0.90	11,000.00	0

1.2 Other Project Characteristics

Urbanization	Urban	Wind Speed (m/s)	2.2	Precipitation Freq (Days)	58
Climate Zone	4			Operational Year	2030
Utility Company	Pacific Gas & Electric Company				
CO2 Intensity (lb/MW hr)	210	CH4 Intensity (lb/MW hr)	0.029	N2O Intensity (lb/MW hr)	0.006

1.3 User Entered Comments & Non-Default Data

Project Characteristics - <http://www.pgecorp.com/corp_responsibility/reports/2019/assets/PGE_CRSR_2019.pdf>

Land Use - Site area estimated based on Google Earth

Construction Phase - CalEEMod default schedule adjusted based on size and duration of CTE building

Demolition - Area of Building 100

Grading - Site area as estimated using Google Earth. Import/export volumes from response to Construction RFI

Vehicle Trips - Operational emissions not estimated in this run

Energy Use -

Architectural Coating -

4.0 Operational Detail - Mobile

Operational emissions not estimated in this run

SJCC FMP - Phase 2b - without CDC - Santa Clara County, Annual

SJCC FMP - Phase 2b - without CDC
Santa Clara County, Annual

1.0 Project Characteristics**1.1 Land Usage**

Land Uses	Size	Metric	Lot Acreage	Floor Surface Area	Population
Unenclosed Parking with Elevator	180.00	1000sqft	2.20	180,000.00	0
Recreational Swimming Pool	11.00	1000sqft	0.90	11,000.00	0

1.2 Other Project Characteristics

Urbanization	Urban	Wind Speed (m/s)	2.2	Precipitation Freq (Days)	58
Climate Zone	4			Operational Year	2030
Utility Company	Pacific Gas & Electric Company				
CO2 Intensity (lb/MW hr)	210	CH4 Intensity (lb/MW hr)	0.029	N2O Intensity (lb/MW hr)	0.006

1.3 User Entered Comments & Non-Default Data

Project Characteristics - <http://www.pgecorp.com/corp_responsibility/reports/2019/assets/PGE_CRSR_2019.pdf>

Land Use - Site area estimated based on Google Earth

Construction Phase - CalEEMod default schedule adjusted based on duration of CTE building

Demolition - Area of Building 100

Grading - Site area as estimated using Google Earth. Import/export volumes from response to Construction RFI

Vehicle Trips - Operational emissions not estimated in this run

Energy Use -

Construction Off-road Equipment Mitigation - Tier 4 Final equipment assumed for mitigating health risk

The Business Building, or Building B, is located on the north side of the San Jose City College Campus on Moorepark Avenue in San Jose. It is two stories, rectangular in forms, and constructed in the International Style. Dominant elements include the concrete block construction, flat roof, ribbon windows divided by metal projecting mullions, louvers/vents at regular intervals on the ribbon windows, aluminum framed and glass doors, and a lack of classical ornamentation. A covered breezeway support concrete block pillars connects one entry to the Business Building to the adjacent building. Mature redwood trees surround the building. (continued on page 3)

City of San José

California was ceded to the United States at the end of the Mexican-American War in 1848 and became a state two years later with San Jose serving as the first capital. The discovery of gold shortly after the annexation of California to the United States spurred growth in San José as a supply hub for gold seekers as well as for those that recognized its agricultural potential. The combination of miners passing through, expanding agriculture, and the arrival of legislators spurred the rapid development.

History of San José City College

San José Junior College (renamed San José City College in 1958) was housed in San José High School buildings from its 1921 founding until 1928, and then physically associated with San José State College (now San José State University) from 1928-1953. In March 1948, the legislature received a recommendation that the Junior College and State College separate.² In 1953, the San José Unified School District began overseeing the Junior College at its own campus on Moorpark Avenue at San José-Los Gatos Road (Project Site), where Higgins & Root Associates, AIA, had designed twenty “movable” units arranged around a quadrangle, costing \$211,000. In Spring 1954, the Board of Education approved the college’s site plan, which envisioned developing the 58-acre campus for 2,000 students. Immediate plans called for nine additional movable units, plus permanent buildings including an administration building, men’s gymnasium, library, three science laboratories, plus football and baseball fields and a track.

By January 1956, the San José Mercury News labeled the Junior College as a “burgeoning giant among Santa Clara County schools” with 3,645 students, far above the 1954 estimate of 2,000 pupils. The fears that the Junior College and San José State would compete for students and duplicate offerings had been unfounded. The paper noted that given San José’s rapid growth, the only thing that would slow the development of the Junior College would be lack of facilities rather than lack of enrollment.

Construction continued in the 1960s, when a new master plan was unveiled. The cover of the February 1961 San José-Santa Clara telephone directory featured an aerial rendering of the college. A new 11,814 square foot Speech Arts building, with a 350-seat theatre (reputedly “the most technically advanced in the San José area”), full stage, mobile orchestra pit, makeup rooms, three classrooms, and modern lighting system was completed in 1963 on the north end of campus. Higgins & Root Associates, AIA, was the architect and O.E. Anderson Co. was the contractor. Higgins & Root also designed the college’s 24,600 square foot, concrete block Student Service Center Building (1962), with a sunken, 120 square foot landscaped courtyard, located just south of the Administration Building. In 1963, the San José/Evergreen Community College District was formed, comprising San José City College and Evergreen Valley College.

Architects/Engineers

Higgins & Roots

The follow is from the *San José Modernism Historic Context Statement*:³

Higgins & Root Associates, AIA was one of the most prolific local architectural firms during the mid-twentieth century. Before founding Higgins & Root, William L. Higgins worked with his father, William E. Higgins, who partnered with architect Frank Wolfe in the firm of Wolfe & Higgins. In 1936, Higgins's father died and the younger man sought a new partner, turning to Dean Warren Charles Perry at the University of California at Berkeley, School of Architecture for suggestions. Perry sent four names to Higgins, and Chester Root got the job. During World War II, Root worked for the Army Corps of Engineers and Higgins closed the office and worked for Permanente. The firm resumed work after the war, designing many schools, banks, churches, factories, civic buildings, jails, hospitals, utilities, residences and other projects. With Cliff May, Higgins & Root

also designed the Sunset Magazine campus in Menlo Park around 1951, a collaborative effort that garnered much press.

The firm designed scores of educational buildings in San José, Saratoga, Los Gatos, Morgan Hill, Mt. Pleasant, Campbell, and other communities in the Santa Clara Valley. The school facilities included classrooms, athletic facilities and administration buildings, from elementary schools to colleges. San José school commissions included many structures for the San José Unified School District; the original Chandler Tripp School (1949) next to the Anne Darling Elementary School; structures at the Peter Burnett Junior High School (1949); the Santa Clara County School Department headquarters on Moorpark Avenue; San José State University structures, such as the Memorial Chapel (1952) and bookstore (ca. 1955); and San José City College buildings, like the Student Service Center (1962) and Speech Arts building (1963).

In 1946, the City of San José selected Higgins & Root, Kress & Gibson, Binder & Curtis, and Ralph Wyckoff to design four new fire stations at Sixth and Taylor streets (Higgins & Root), Sixth and Julian streets (Binder & Curtis), Minnesota Avenue near Iris Court in Willow Glen, and Seventeenth and Santa Clara streets. In 1949, the firm designed a remodel of the fire damaged Sainte Claire Club at Second and St. James streets. In 1951, Higgins & Root designed a complex of five shops and four medical and dental offices built for Herschel C. Graham, manager of F.W. Woolworth Co. The stone, brick and stucco complex was built next to the First National Bank on Business Street (now Business Circle) near Flagg Avenue. The firm designed a chapel (1949) built in honor of Frances R. Schallenberger at the St. Francis Episcopal Church at Pine and Washington avenues in Willow Glen; the modern Gothic influenced Calvin Presbyterian Church (1955) at Meridian Road and Fruitdale Avenue; the \$80,000 Penn Mutual Life Insurance Co. headquarters building (ca. 1955) on The Alameda, south of Idaho Street; the 1963 remodel of Higgins & Root's old offices at 220 Meridian Avenue, which the firm updated for a new tenant; and the August Boeger School (1965) in the Mt. Pleasant School District. Other San José commissions included the new mall area at the Santa Clara County Superior In 1946, the City of San José selected Higgins & Root, Kress & Gibson, Binder & Curtis, and Ralph Wyckoff to design four new fire stations at Sixth and Taylor streets (Higgins & Root), Sixth and Julian streets (Binder & Curtis), Minnesota Avenue near Iris Court in Willow Glen, and Seventeenth and Santa Clara streets. Pine and Washington avenues in Willow Glen; the modern Gothic influenced Calvin Presbyterian Church (1955) at Meridian Road and Fruitdale Avenue; the \$80,000 Penn Mutual Life Insurance Co. headquarters building (ca. 1955) on The Alameda, south of Idaho Street; the 1963 remodel of Higgins & Root's old offices at 220 Meridian Avenue, which the firm updated for a new tenant; and the August Boeger School (1965) in the Mt. Pleasant School District. Other San José commissions included the new mall area at the Santa Clara County Superior Court complex (1966) at North First and St. James streets; and the San José Health Center (ca. 1971). Higgins & Root's much-heralded Santa Clara County Welfare Building (1963) at 55 West Younger Avenue has been altered extensively and now houses the Santa Clara County Office of the Sheriff. Like many mid-century branch libraries in San José, Higgins & Root's Rosegarden Branch Library (1960) was demolished. In 1963, Higgins & Root moved from the Park-Meridian Professional Building at 220 Meridian Avenue in San José to its newly designed offices in Los Gatos. It had designed more than \$60 million in projects by 1963. In 1967, the Coast Valleys Chapter of the American Institute of Architects (AIA) honored the firm with an Architects' Commendation Award for the Saratoga United Presbyterian Church at 20455 Harriman Avenue, and for the Union School District Administration Building at 5175 Union Avenue in San José. The AIA chapter also gave an Architectural Design Merit Award for the firm's interior of Los Gatos Methodist Church, at Church Street and High School Court. Factory Magazine honored Higgins & Root's 42,000 square foot Tempress Industries electronics plant (1970) in Los Gatos as one of the ten most beautiful factories in the United States in 1970. The San Mateo County Development Association awarded the top 1970 Environmental Award to the firm's Sunset Magazine Building in Menlo Park. The firm also won three Awards of Merit in the 1970 AIA Design Awards program of the AIA's Santa Clara Valley Chapter. Root died in 1977, and Higgins subsequently partnered with a Santa Cruz-based architecture firm that specialized in residential work. The new firm was called Higgins & Root, Ellmore-Titus, Inc.

William L. Higgins

The follow is from the *San José Modernism Historic Context Statement*:⁵

In addition to all of the buildings he designed with Higgins & Root Associates, AIA and its successors, architect William L. Higgins served on both the Saratoga Planning Commission and the Santa Clara Planning Commission. He was most proud of the Higgins & Root designs at West Valley College in Saratoga, where his firm designed half of the buildings and Reid & Tarics designed the other half.

Chester O. Root

The follow is from the *San José Modernism Historic Context Statement*:⁶

Root, Chester O. Chester O. Root, FAIA (ca. 1905-1977) was a partner in the prolific San José/Los Gatos firm of Higgins & Root Associates, AIA. The firm designed schools, churches, residences, hospitals, libraries, and other civic, commercial and industrial buildings throughout the Santa Clara Valley, earning national awards of excellence. Root worked with a group of architects who collaborated with the Santa Clara County Council on Intergovernmental Relations to plan the San José's Civic Center. The descendant of two pioneer California families, Root was born in Grass Valley but graduated from Berkeley High School and the University of California, Berkeley School of Architecture. He earned his master's degree in architecture from Harvard University and his architecture license in 1935, remaining in the East Coast briefly to work with Grosvenor Atterbury and Norman Bel Geddes. Root returned to California in 1936 to partner with William L. Higgins in Higgins & Root, after the Dean of U.C. Berkeley's architecture school recommended him to Higgins. During World War II, Root had a two-year stint with the Army Corps of Engineers. Root was the first architect appointed to the Santa Clara County Planning Commission, where he served from 1947-1957 with two terms as chair. He later joined the Los Gatos Town Planning Commission for eight years, where he also became chair. In 1976, Root joined the design review board of the San Francisco Bay Area Conservation and Development Commission. He was a founding member and chapter president of Santa Clara Valley Chapter of the American Institute of Architects.

United Architects

United Architects consisted of five Scottsdale, Arizona firms: Western Engineering, Inc. (Architects & Engineers), Wong and Hall (Architects), T.S. Montgomery (Architect), Western Testing Laboratories

- Shopping Center, 52nd & Thomas, Phoenix
- Feed Bag Restaurant (Rebuild), Mesa
- Lulu Belle Restaurant, Scottsdale

William C. Hall

It is possible that William C. Hall is the only person from United Architects that is linked to development at the SJCC campus. Hall studied Engineering and Architecture at San José State College, St. Thomas College, and Notre Dame University.¹⁰ He was employed by the Division of Highways, California in 1948-49 and associated with Arena & Zaima, Higgins & Root, H.H. Benedict and Wong and Hall (partner).¹¹

Evaluation

The subject property is being evaluated for eligibility for the California Register of Historical Resources under the following four criteria.

- Criterion 1 - Associated with events that have made a significant contribution to the broad patterns of local or regional history or the cultural heritage of California or the United States.
- Criterion 2 - Associated with the lives of persons important to local, California or national history.
- Criterion 3 - Embodies the distinctive characteristics of a type, period, region or method of construction or represents the work of a master or possesses high artistic values.
- Criterion 4 - Has yielded, or has the potential to yield, information important to the prehistory or history of the local area, California or the nation.

Criterion 1 (Events). The Business Building, constructed 1961, appears to have been planned as part of the Master Plan developed by Higgins & Root c1960. If more of the originally master planned campus was intact the campus as a whole would warrant evaluation as a resource with the Business Building being a potential contributor; however, existing conditions are such that most of the original buildings,

Page 3 of 16

circulation patterns (vehicular and pedestrian), and the landscaping have been demolished or altered. While the development execution of the Master Plan was a significant event in the history of San José City College archival evidence did not reveal that any significant events were specifically associated with the Business Building. For these reasons, the Business Building is recommended as not eligible for individual listing in the California Register under Criterion 1.

Criterion 2 (People). While a number of significant individuals are associated with the campus, including Amy Tan (author), Andre Phillips (Olympian), Ato Boldon (Olympian), Chon Gallegos (Oakland Raider), and Bruce Jenner (Olympian) archival research did reveal and particular association of these individuals, or any others, with the Business Building.^{12, 13} As indicated above, archival research identified that the Business Building was part of the larger Master Plan effort in the 1960s designed by Higgins & Root. How the Business Building fits into the overall body of work by Higgins & Root is analyzed below under Criterion 3 (Architecture). Due to the lack of associations of significance individuals, the Business Building on the SJCC Campus is recommended as ineligible for individual listing in the California Register under Criterion 2.

Criterion 3 (Architecture). The Business Building appears to have been designed by Higgins & Root as a part of the Master Plan c1960. The firm of Higgins & Root was prolific in the Bay Area with numerous schools attributed to them ranging the elementary schools to colleges including the West Valley College, Saratoga Campus. An evaluation of the West Valley College, Saratoga Campus, was not part of this analysis; however, based on historic aerials and a 1970 campus map it appears that many of the original buildings still remain on this campus. If this was the case it would likely represent a more intact example of campus planning by Higgins & Root. The SJCC Campus Master Plan (illustrated above on page 10) included a number of academic and administrative buildings as well as athletic and supporting facilities. If more of the originally master planned campus was intact the campus as a whole would warrant evaluation as a resource with the Business Building being a potential contributor; however, existing conditions are such that most of the original buildings, circulation patterns (vehicular and pedestrian), and the landscaping have been demolished or altered. While San José City College is listed as a project by United Architects this is likely only for the inclusion of William C. Hall on their team, a former employee of Higgins & Root, and the association with United Architects does not warrant further exploration. As discussed above, the Business Building has lost much of its context as a component of the 1960s Master Plan. Given the extensive body of work produced by Higgins & Root, including other educational institutions such as the West Valley College, Saratoga Campus, the Business Building is not considered an excellent surviving example of their work as little remains of the original Master Planned

CONTINUATION SHEET

Property Name: | |
Page 3 of 16

campus and it does not warrant consideration as a historic resources individually. Therefore, the Business Building is recommended ineligible for the California Register under Criterion 3.

Criterion 4 (Information Potential). Research did not reveal that the subject property would provide important information relevant to history or pre-history that was not already known. This significance criterion typically applies to rare construction types when involving architectural resources. For these reasons, the Business Building is recommended as not eligible for individual listing in the California Register under Criterion 4.

The subject property was also evaluated for eligibility as a Landmark and/or Structure of Merit under City of San José criteria. The local criteria closely follow the California Register criteria and include:

- Site of a significant historical event
- Identification with people who significantly contributed to local culture or history
- Identification with a master builder or architect
- Example of a unique architectural or engineering design
- Representative of an aspect of City history such as agriculture, architecture, commerce, or industry during a specific era from 1777 to the present

The first two bullets align with the assessments under Criteria 1 and 2, respectively, for the California Register evaluation above. The 3rd and 4th bullets align with the assessment under Criterion 3 for the California Register evaluation above. While the Business Building represents educational institutions of the 1960s it doesn't warrant individual evaluation and with the demolished or alterations of most of the original buildings, circulation patterns (vehicular and pedestrian), and the landscaping the campus as a whole no longer reflects the Higgins & Root Master Plan. For these reasons, the Business Building is recommended ineligible for listing as a City of San José Landmark.

NOTES:

MMBtu = million metric British Thermal Unit; MWh = Megawatt-hour.

1. EMFAC2017 includes compressed natural gas in terms of diesel gallon equivalents. This is converted into Btu using the U.S. Department of Energy Alternative Fuel Data Center conversion: 1 DGE of CNG = 128,488 Btu. Available at: https://afdc.energy.gov/fuels/equivalency_methodology.html.

Non-mobile electricity use based on values for existing and projected use obtained from CalEEMod outputs. Existing use is based on historical energy usage rates in CalEEMod, while new and renovated buildings under the project use CalEEMod's default 2016 rates adjusted for additional reductions in 2019 code for non-residential uses.

Mobile electricity use based on VMT data from traffic study, adjusted per vehicle fleet-average electricity use. Used USEPA average economy of 34 kWh/100 miles.

Non-mobile natural gas use based on existing (2019) use and projected (2030) use from the SJCC Utilities master Plan. The values were converted from therms to MMBtu.

Mobile natural gas use based on VMT data from traffic study adjusted per vehicle fleet-average natural gas use.

Mobile diesel use based on VMT data from traffic study adjusted according to vehicle fleet-average diesel use in Santa Clara County.

Mobile gasoline use based on VMT data from traffic study adjusted according to vehicle fleet-average gasoline use in Santa Clara County.

Executive Summary

This report presents the results of the transportation analysis conducted for the proposed San Jose City College (SJCC) Vision 2030 Facilities Master Plan. SJCC is located within the South Bascom Urban Village boundary. The study was conducted for the purpose of identifying the potential transportation impacts related to an increase in student enrollment through 2030.

The project site is actually a Santa Clara County pocket, but it is surrounded by San Jose. The Community College District has the approval authority for the project and is the lead agency for the environmental review. However, since any project transportation impacts would occur in San Jose, the project was evaluated following the standards and methodologies established in the City of San Jose's Transportation Analysis Handbook, adopted in April 2020.

SJCC projects an increase in enrollment of 2,029 students by 2030. The SJCC Facilities Master Plan provides a framework for the development of the institution through 2030 to accommodate increased enrollment through new and improved facilities on campus. The master plan also recommends vehicular access and circulation changes to the campus by adding a driveway at Kingman Avenue and Leigh Avenue, eliminating turn movement restrictions at Leland Avenue and Moorpark Avenue by making it a three-way signal, and adding internal roadway connections between campus driveways. Furthermore, the master plan recommends the addition of a 900-stall 5 level parking garage in the southwest corner of the campus.

CEQA Transportation Impacts

Project Vehicle Miles Traveled (VMT) Analysis

The impact on VMT by the SJCC increased enrollment was analyzed using the City of San Jose's TDF model. The daily VMT per student would decrease by 0.21, from 5.65 VMT under existing conditions to 5.44 VMT by 2030, therefore not causing a significant VMT impact.

CEQA Cumulative Impacts

The project is consistent with the General Plan goals and policies for the following reasons:

- The project site is located adjacent to bus stops on Bascom Avenue and Leigh Avenue.
- The project would slightly increase the employment density in the project area, and the proposed density would be consistent with the General Plan Land Use Designation.
- The project would provide improvements to pedestrian connectivity in the vicinity of the project site.

Therefore, based on the project description, the proposed project would be consistent with Envision San Jose 2040 General Plan. The project would be considered as part of the cumulative solution to meet the General Plan's long-range transportation goals and would result in a less-than-significant cumulative impact.

Local Transportation Effects

Project Trip Generation

Based on trip generation rates recommended by the Institute of Transportation Engineers (ITE), it is estimated that the proposed project would include 203 trips occurring during the AM peak hour and 203 trips occurring during the PM peak hour.

Intersection Traffic Operations

The results of the intersection level of service analysis (see Table ES-1) show that the intersection of Bascom Avenue and Moorpark Avenue operates unacceptably at an LOS E under existing, background and background plus project conditions. The project would not cause any adverse effects at this intersection. All other intersections operate at an acceptable level of service under all study scenarios.

Driveway Operations

The results of the driveway level of service analysis show that the Kingman Avenue Driveway on Bascom Avenue operates unacceptably at an LOS F under project conditions. All other driveways operate at an acceptable level of service.

Other Transportation Issues

The proposed site plan shows adequate site access. The project would enhance pedestrian circulation by providing improved pedestrian access. Hexagon has the following recommendations resulting from the site access analysis.

- Signal coordination is recommended between Leland Avenue and Moorpark Avenue and Leland Avenue and Parkmoor Avenue to reduce the 95th percentile queue for the northbound left-turns at Leland Avenue and Parkmoor Avenue.
- The new driveway at Leigh Avenue and Kingman Avenue should be designed according to the City of San Jose Geometric Guidelines. When Kingman Avenue and Leigh Avenue is reconfigured under project conditions, a minimum storage length of 125 feet is recommended for the northbound left-turn movement to accommodate the 95th percentile queue during the peak hours.
- If feasible, Kingman Avenue should be widened to two outbound lanes. This would reduce the westbound queue and delay. A sidewalk should also be installed along the northern side of Kingman Avenue to improve pedestrian safety and access along this entrance.
- A median island should be installed along the full length of the right-turn lane into the campus on Moorpark Avenue to prevent vehicles from the off-ramp accessing this lane. Off-ramp vehicles would be forced to travel farther along Moorpark Avenue to Leigh Avenue to enter the campus. The driveway egress from parking Lot C onto Moorpark Avenue should be closed to prevent a conflict with the vehicles in the right turn lane.
- Traffic calming treatments like speed humps and speed signage should be provided on Kingman Avenue and the north-south connection along the eastern portion of the campus to keep vehicular speeds low and improve pedestrian safety.

- There are currently no bicycle parking facilities within the campus. It is recommended that bicycle facilities like bicycle racks and bicycle lockers be installed to improve bicycle access to the campus.
- SJCC should coordinate with VTA to reroute Route 25 and add a bus stop within campus. A potential new route could be along the new Kingman Avenue east-west extension instead of Fruitdale Avenue. With a bus stop within campus, students would not cut through the residential neighborhoods to access campus. It would also improve overall pedestrian safety as students would not have to cross Bascom Avenue, which is a major roadway.
- SJCC should also coordinate with VTA to add additional transit service to the campus to provide an alternative to driving to campus including a shuttle to and from the VTA LRT Green Line stop on Fruitdale Avenue. New bus routes and shuttles to the campus could be accommodated by creating a transit center on the campus.
- Adding parking on campus would address some of the parking demand issue on campus, but would encourage driving, which is counter-productive to the City's goal of decreasing VMT. To reduce parking demand on the campus, alternative modes of transportation like public transportation, carpooling, and bicycling should be strongly encouraged.

Table ES 1
Intersection Level of Service Summary

#	Intersection	Peak Hour	Count Date	Existing Conditions		Background Conditions					
				No Project		No Project		with Project			
				Avg. Delay (sec)*	LOS	Avg. Delay (sec)*	LOS	Avg. Delay (sec)*	LOS	Incr. in Critical Delay (sec)	Incr. in Critical V/C
1	Leigh Avenue and Moorpark Avenue	AM	10/12/16	28.6	C	28.8	C	29.3	C	0.6	-0.003

Note:

* Delays based on average delay for signalized intersections.

A growth factor of 1% was applied per year from previous existing count date if older than 2018 to estimate new count data.

Bold indicates a substandard level of service.

1. Introduction

This report presents the results of the transportation analysis conducted for the proposed San Jose City College (SJCC) Vision 2030 Facilities Master Plan. SJCC is located within the South Bascom Urban Village boundary. The study was conducted for the purpose of identifying the potential transportation impacts related to an increase in student enrollment through 2030, hereinafter called the “project”.

The project site is actually a Santa Clara County pocket, but it is surrounded by San Jose (see Figure 1). The Community College District has the approval authority for the project and is the lead agency for the environmental review. However, since any project transportation impacts would occur in San Jose, the project was evaluated following the standards and methodologies established in the City of San Jose’s Transportation Analysis Handbook, adopted in April 2020.

Project Description

SJCC projects an increase in enrollment of 2,029 students by 2030. The SJCC Facilities Master Plan provides a framework for the development of the institution through 2030 to accommodate increased enrollment through new and improved facilities on campus. The master plan also recommends vehicular access and circulation changes to the campus by adding a driveway at Kingman Avenue and Leigh Avenue, eliminating turn movement restrictions at Leland Avenue and Moorpark Avenue by making it a three-way signal, and adding internal roadway connections between campus driveways (see Figure 2). Furthermore, the master plan recommends the addition of a 900-stall 5 level parking garage in the southwest corner of the campus.

Based on the City of San Jose’s Transportation Analysis Policy (Policy 5-1) and the Transportation Analysis Handbook, the Transportation Analysis report for the project includes a California Environmental Quality Act (CEQA) transportation analysis and a Local Transportation Analysis (LTA). Since the project would generate greater than 100 new peak-hour vehicle trips, the transportation study will be required to follow the guidelines set forth by the Congestion Management Program (CMP) of the Santa Clara Valley Transportation Authority (VTA).

Urban Village

SJCC is located within the South Bascom Commercial Corridor and Center Urban Village. As part of the Envision San Jose 2040 General Plan, the City has identified historically underutilized locations within San Jose that will be developed as “Urban Villages.” These urban villages will promote the development of active, walkable, bicycle friendly, transit-oriented, mixed-use urban settings for new housing and job growth. The General Plan provides a policy framework to direct new housing and employment projects into these urban villages. Because the project would provide employment and

educational services within the South Bascom Commercial Corridor and Center Urban Village, the project is consistent with the goals and policies set forth in the General Plan.

Transportation Policies

To align the City of San Jose's transportation analysis guidelines with State of California Senate Bill 743 (SB 743) and the City's goals as set forth in the Envision San Jose 2040 General Plan, the City of San Jose adopted Transportation Analysis Policy 5-1. The policy establishes the thresholds for transportation impacts under the California Environmental Quality Act (CEQA) based on vehicle miles traveled (VMT) instead of intersection level of service (LOS).

The Transportation Analysis Policy aligns with the Envision San Jose 2040 General Plan which seeks to focus new development growth within Planned Growth Areas, bringing together office, residential, and service land uses to internalize trips and reduce VMT. VMT-based policies support dense, mixed-use, infill projects as established in the General Plan's Planned Growth Areas. The Envision San Jose 2040 General Plan contains the following policies to encourage the use of non-automobile transportation modes to minimize vehicle trip generation and reduce VMT:

- Accommodate and encourage the use of non-automobile transportation modes to achieve San Jose's mobility goals and reduce vehicle trip generation and VMT (TR-1.1);
- Consider impacts on overall mobility and all travel modes when evaluating transportation impacts of new developments or infrastructure projects (TR-1.2);
- Increase substantially the proportion of commute travel using modes other than the single-occupant vehicle in order to meet the City's mode split targets for San Jose residents and workers (TR-1.3);
- Through the entitlement process for new development, projects shall be required to fund or construct needed transportation improvements for all transportation modes, giving first consideration to improvement of bicycling, walking and transit facilities and services that encourage reduced vehicle travel demand (TR-1.4);
- Actively coordinate with regional transportation, land use planning, and transit agencies to develop a transportation network with complementary land uses that encourage travel by bicycling, walking and transit, and ensure that regional greenhouse gas emissions standards are met (TR-1.8);
- Coordinate the planning and implementation of citywide bicycle and pedestrian facilities and supporting infrastructure. Give priority to bicycle and pedestrian safety and access improvements at street crossings and near areas with higher pedestrian concentrations (school, transit, shopping, hospital, and mixed-use areas) (TR-2.1);
- Provide a continuous pedestrian and bicycle system to enhance connectivity throughout the City by completing missing segments. Eliminate or minimize physical obstacles and barriers that impede pedestrian and bicycle movement on City streets. Include consideration of grade-separated crossings at railroad tracks and freeways. Provide safe bicycle and pedestrian connections to all facilities regularly accessed by the public, including the Mineta San Jose International Airport (TR-2.2);
- Integrate the financing, design and construction of pedestrian and bicycle facilities with street projects. Build pedestrian and bicycle improvements at the same time as improvements for vehicular circulation (TR-2.5);

- Require new development where feasible to provide on-site facilities such as bicycle storage and showers, provide connections to existing and planned facilities, dedicate land to expand existing facilities or provide new facilities such as sidewalks and/or bicycle lanes/paths, or share in the cost of improvements (TR-2.8);
- As part of the development review process, require that new development along existing and planned transit facilities consist of land use and development types and intensities that contribute towards transit ridership, and require that new development is designed to accommodate and provide direct access to transit facilities (TR-3.3);
- Support the development of amenities and land use and development types and intensities that increase daily ridership on the VTA, BART, Caltrain, ACE and Amtrak California systems and provide positive fiscal, economic, and environmental benefits to the community (TR-4.1);
- Promote transit-oriented development with reduced parking requirements and promote amenities around appropriate transit hubs and stations to facilitate the use of available transit services (TR-8.1);
- Support using parking supply limitations and pricing as strategies to encourage the use of non-automobile modes (TR-8.3);
- Discourage, as part of the entitlement process, the provision of parking spaces significantly above the number of spaces required by code for a given use (TR-8.4);
- Allow reduced parking requirements for mixed-use developments and for developments providing shared parking or a comprehensive transportation demand management (TDM) program, or developments located near major transit hubs or within Urban Villages and other Growth Areas (TR-8.6);
- Within new development, create and maintain a pedestrian-friendly environment by connecting the internal components with safe, convenient, accessible, and pleasant pedestrian facilities and by requiring pedestrian connections between building entrances, other site features, and adjacent public streets (CD-3.3);
- Create a pedestrian-friendly environment by connecting new residential development with safe, convenient, accessible, and pleasant pedestrian facilities. Provide such connections between new development, its adjoining neighborhood, transit access points, schools, parks, and nearby commercial areas (LU-9.1);
- Facilitate the development of housing close to jobs to provide residents with the opportunity to live and work in the same community (LU-10.5);

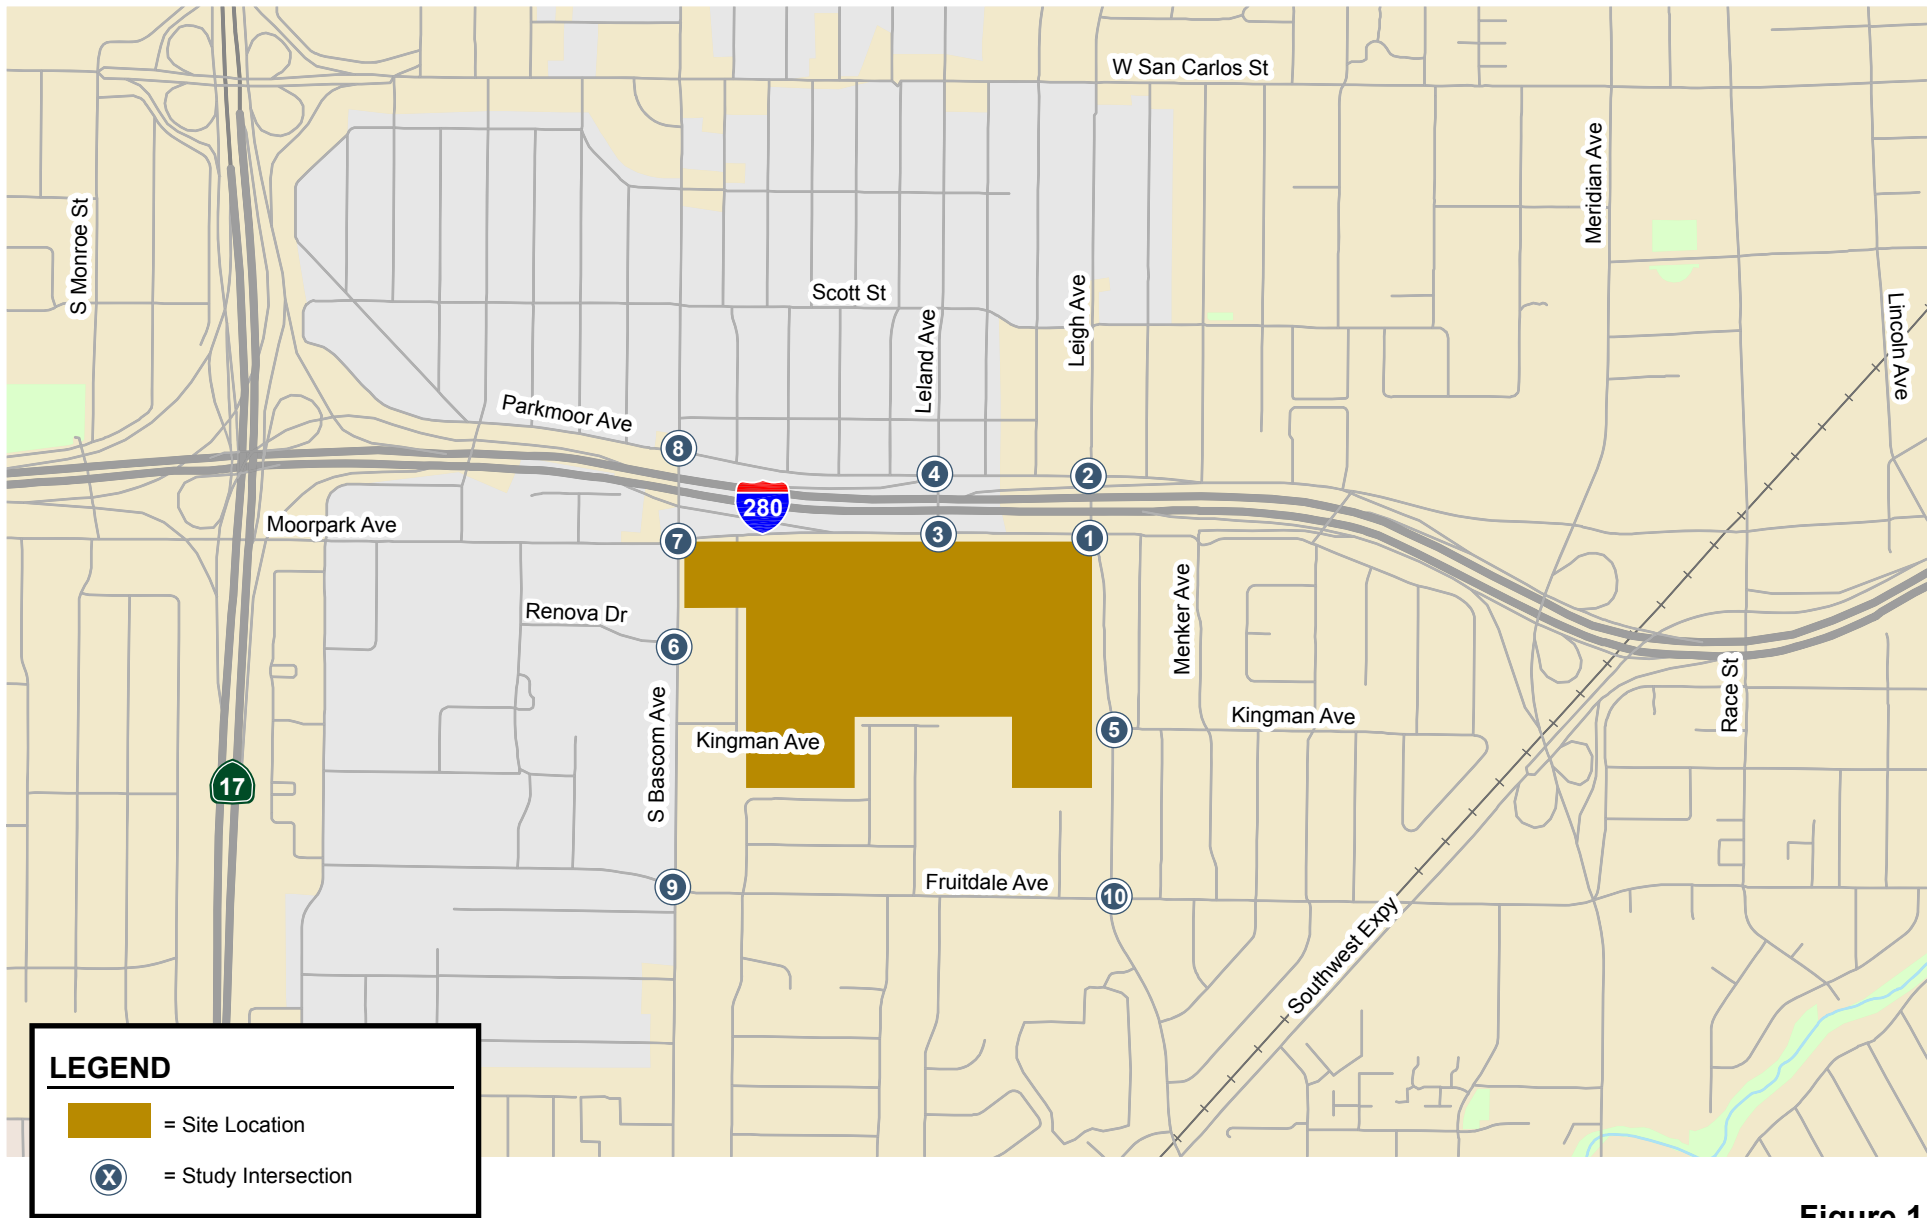

Figure 1
Site Location and Study Intersections

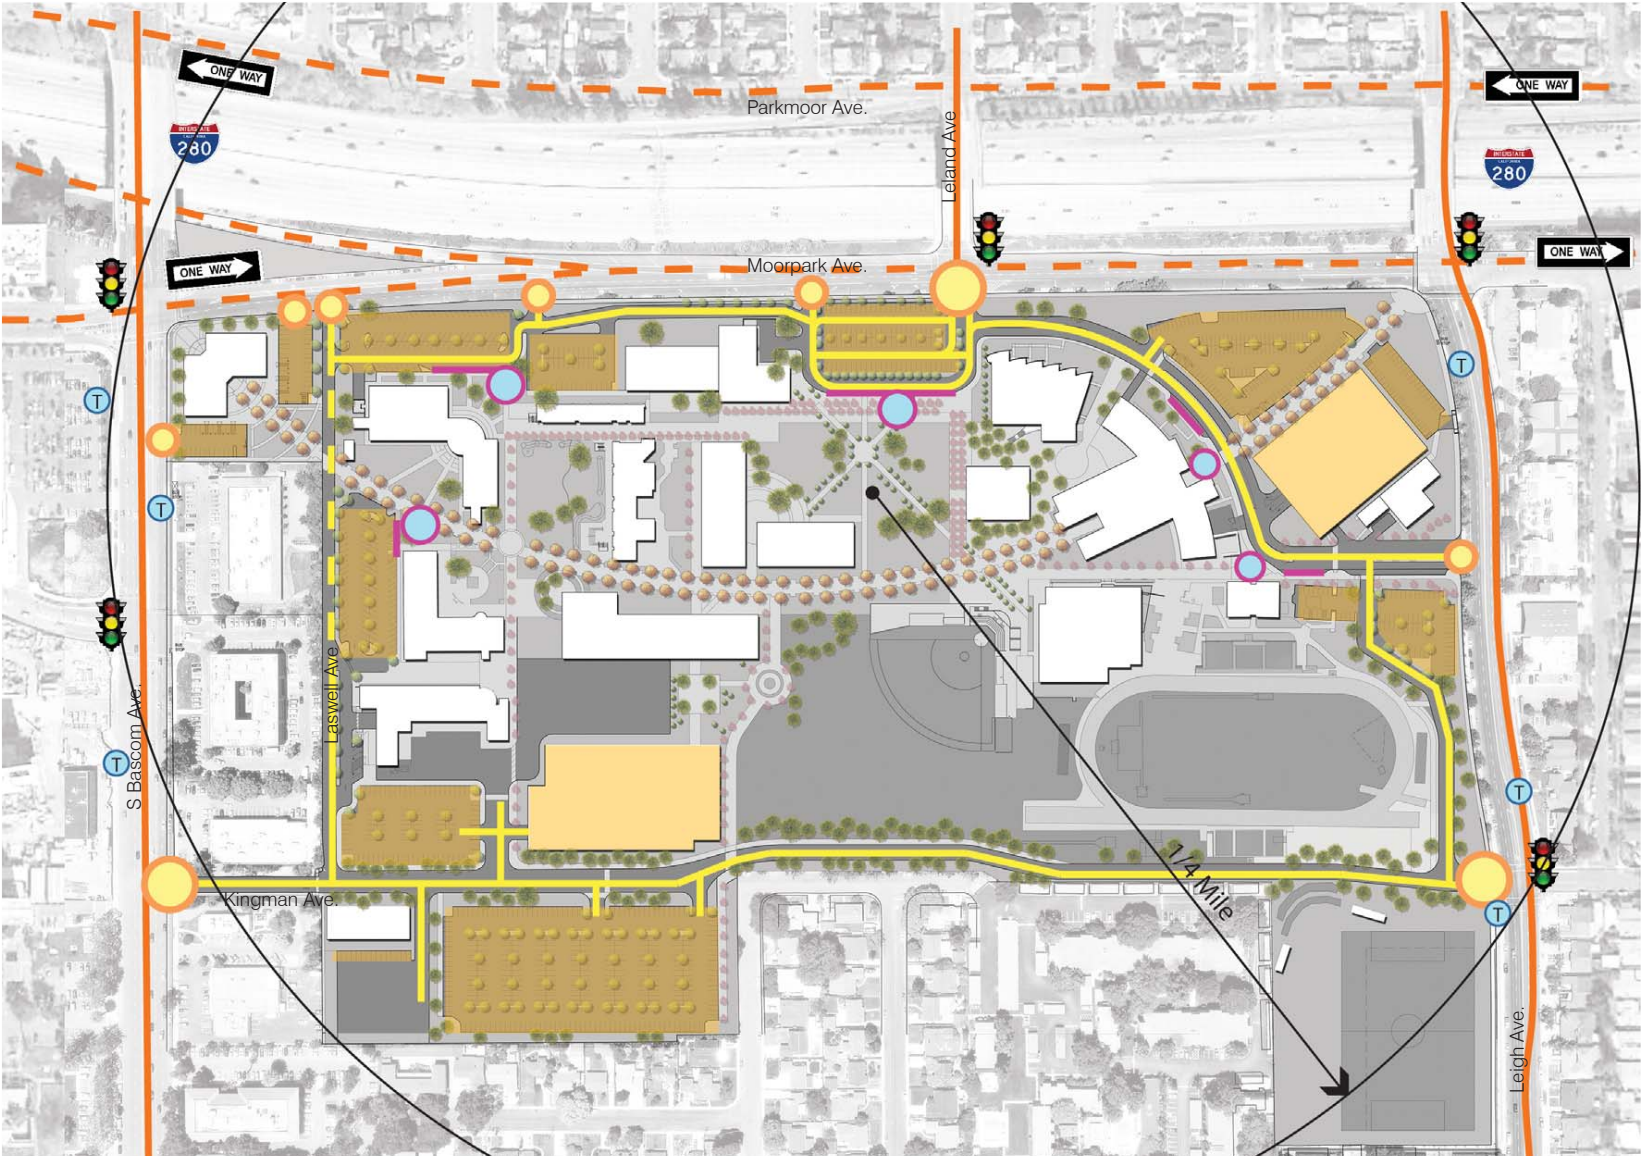

Figure 2
Site Plan

CEQA Transportation Analysis Scope

The CEQA Transportation Analysis includes an evaluation of vehicle miles traveled (VMT).

VMT Analysis

The City of San Jose's Transportation Analysis Policy establishes procedures for determining project impacts on VMT based on project description, characteristics, and/or location. The City of San Jose defines VMT as the total miles of travel by personal motorized vehicles a project is expected to generate in a day. VMT is calculated using the Origin-Destination VMT method, which measures the full distance of personal motorized vehicle-trips with one end within the project.

A project's VMT is compared to the appropriate thresholds of significance based on the project location and type of development.

The City's VMT Policy does not address schools. For assessing the VMT for this school project, the school's VMT was divided by the number of students to determine VMT per student. If the VMT per student under project conditions would be equal to or lower than the VMT per student without the project, the project was considered to have a less than significant VMT impact.

Local Transportation Analysis Scope

A local transportation analysis (LTA) identifies transportation operational issues that may arise due to a development project, evaluates the effects of the project on transportation, access, circulation, and related safety elements in the proximate area of the project, and supplements the VMT analysis.

As part of the LTA, a project is required to conduct an intersection operations analysis for any signalized intersections within a half mile of the project and at any signalized intersections currently operating at LOS D or worse within one mile of the project. The AM and PM peak-hour traffic operations conditions were evaluated for the ten signalized intersections listed below.

1. Leigh Avenue and Moorpark Avenue
2. Leigh Avenue and Parkmoor Avenue
3. Leland Avenue and Moorpark Avenue
4. Leland Avenue and Parkmoor Avenue
5. Leigh Avenue and Kingman Avenue
6. Bascom Avenue and Renova Drive
7. Bascom Avenue and Moorpark Avenue (CMP)
8. Bascom Avenue and Parkmoor Avenue
9. Bascom Avenue and Fruitdale Avenue (CMP)
10. Leigh Avenue and Fruitdale Avenue

Traffic conditions at the study intersections were analyzed for both the weekday AM and PM peak hours of adjacent street traffic. The AM peak hour is expected to occur between 7:00 AM and 9:00 AM and the PM peak hour is expected to occur between 4:00 PM and 6:00 PM on a regular weekday. These are the peak commute hours during which most traffic congestion occurs on the roadways.

Intersection operations conditions were evaluated for the following scenarios:

- **Existing Conditions.** Existing traffic volumes at the study intersections were obtained from traffic counts. Due to Covid-19 and regional shelter-in-place orders, new traffic counts do not represent typical traffic conditions. Therefore, a growth rate of 1% per year was applied to the

traffic counts that were more than two years old to estimate the traffic volumes for existing conditions. The study intersections were evaluated with a level of service analysis using Traffix software in accordance with the 2000 Highway Capacity Manual methodology.

- **Background Conditions.** Background traffic volumes reflect traffic added by nearby approved projects that are not yet completed or occupied. The added traffic from approved but not yet completed developments was provided by the City of San Jose.
- **Background Plus Project Conditions.** Background plus project conditions reflect projected traffic volumes on the planned roadway network with completion of the project and approved developments. Background plus project traffic volumes were estimated by adding to background traffic volumes the additional traffic generated by the project.

The LTA also includes a freeway segment capacity analysis, freeway ramp operations analysis, vehicle queuing analysis, an evaluation of potential project adverse effects on bicycle, pedestrian, and transit facilities, and a review of site access, on-site circulation, and parking demand.

Intersection Operations Analysis Methodology

This section presents the methods used to determine the traffic operations conditions at the study intersections and the impacts of the project on intersection operations. It includes descriptions of the data requirements, the analysis methodologies, and the applicable level of service standards for identifying deficiencies.

Data Requirements

The data required for the analysis were obtained from the City of San Jose. The following data were collected from these sources:

- existing traffic volumes
- approved project trips
- existing lane configurations
- signal timing and phasing

Level of Service Standards and Analysis Methodologies

Traffic conditions at the study intersections were evaluated using level of service (LOS). *Level of Service* is a qualitative description of operating conditions ranging from LOS A, or free-flow conditions with little or no delay, to LOS F, or jammed conditions with excessive delays. However, the study intersections are analyzed using the City of San Jose methodology and thresholds since the project site is surrounded by the City of San Jose. The various analysis methods are described below.

Signalized Intersections

The City of San Jose level of service methodology for signalized intersections is the 2000 *Highway Capacity Manual* (HCM) method. This method is applied using the TRAFFIX software. The 2000 HCM operations method evaluates signalized intersection operations on the basis of average control delay time for all vehicles at the intersection. The City of San Jose level of service standard for all signalized intersections is LOS D or better. Bascom Avenue and Moorpark Avenue and Bascom Avenue and Fruitdale Avenue are CMP intersections and have a level of service standard of LOS D per the City of San Jose. The correlation between average control delay and level of service is shown in Table 1.

Table 1
Signalized Intersection of Level of Service Definitions Based on Control Delay

Level of Service	Description	Average Control Delay Per Vehicle (sec.)
A	Signal progression is extremely favorable. Most vehicles arrive during the green phase and do not stop at all. Short cycle lengths may also contribute to the very low vehicle delay.	10.0 or less
B+	Operations characterized by good signal progression and/or short cycle lengths.	10.1 to 12.0
B	More vehicles stop than with LOS A, causing higher levels of average vehicle delay.	12.1 to 18.0
B-		18.1 to 20.0
C+	Higher delays may result from fair signal progression and/or longer cycle lengths. Individual cycle failures may begin to appear at this level. The number of vehicles stopping is significant, though many still pass through the	20.1 to 23.0
C		23.1 to 32.0
C-		32.1 to 35.0
D+	The influence of congestion becomes more noticeable. Longer delays may result from some combination of unfavorable signal progression, long cycle lengths, or high volume-to-capacity (V/C) ratios. Many vehicles stop and	35.1 to 39.0
D		39.1 to 51.0
D-		51.1 to 55.0
E+	This is considered to be the limit of acceptable delay. These high delay values generally indicate poor signal progression, long cycle lengths, and high volume-to-capacity (V/C) ratios. Individual cycle failures occur frequently.	55.1 to 60.0
E		60.1 to 75.0
E-		75.1 to 80.0
F	This level of delay is considered unacceptable by most drivers. This condition often occurs with oversaturation, that is, when arrival flow rates exceed the capacity of the intersection. Poor progression and long cycle lengths may also be major-contributing causes of such delay levels.	greater than 80.0

Source: Transportation Research Board, *Highway Capacity Manual 2000* (Washington, D.C., 2000) p10-16.

Intersection Vehicle Queuing Analysis

For selected high-demand movements at the study intersections, the estimated maximum vehicle queues were compared to the existing or planned storage capacity. The queuing analysis is presented for informational purposes only, since the City of San Jose has not defined a policy related to queuing. Vehicle queues were calculated using a Poisson probability distribution, which estimates the probability of “n” vehicles for a vehicle movement using the following formula:

$$P(x = n) = \frac{\lambda^n e^{-(\lambda)}}{n!}$$

Where:

$P(x = n)$ = probability of “n” vehicles in queue per lane

n = number of vehicles in the queue per lane

λ = average # of vehicles in the queue per lane (vehicles per hr. per lane/signal cycles per hr.)

The basis of the analysis is as follows: (1) the Poisson probability distribution is used to estimate the 95th percentile maximum number of queued vehicles per signal cycle for a particular movement; (2) the estimated maximum number of vehicles in the queue is translated into a queue length, assuming 25 feet per vehicle; and (3) the estimated maximum queue length is compared to the existing or planned available storage capacity for the movement.

For signalized intersections, the 95th percentile queue length value indicates that during the peak hour, a queue of this length or less would occur on 95 percent of the signal cycles. Or, a queue length larger than the 95th percentile queue would only occur on 5 percent of the signal cycles (about 3 cycles during the peak hour for a signal with a 60-second cycle length). Therefore, left-turn pocket storage designs based on the 95th percentile queue length would ensure that storage space would be exceeded only 5 percent of the time for a signalized movement.

Adverse Intersection Operations Effects

The criteria used to determine intersection operations effects on signalized intersections are based on City of San Jose Level of Service standards.

The project is said to create an adverse effect at a signalized intersection in the City of San Jose if for either peak hour:

1. The level of service at the intersection degrades from an acceptable LOS D or better under background conditions to an unacceptable LOS E or F under background plus project conditions, or
2. The level of service at the intersection is an unacceptable LOS E or F under background conditions and the addition of project trips cause both the critical-movement delay at the intersection to increase by four (4) or more seconds and the volume-to-capacity ratio (V/C) to increase by one percent (.01) or more.

An exception to rule #2 above applies when the addition of project trips reduces the amount of average delay for critical movements (i.e., the change in average delay for critical movements is negative). In this case, a deficiency is identified if there is an increase in the critical V/C value by .01 or more.

Adverse effects at signalized intersections can be addressed by one of the following approaches:

- Construct improvements to the subject intersection or other roadway segments of the citywide transportation system to increase overall capacity, or
- Reduce project-generated vehicle trips (e.g., implement a “trip cap”) to eliminate the adverse operational effects and restore intersection operations to background conditions. The extent of trip reduction should be set at a level that is realistically attainable through proven methods of reducing trips.

Freeway Ramp Analysis Methodology

A freeway ramp analysis was performed in order to verify that the freeway ramps would have sufficient capacity to serve the expected traffic volumes with and without the project. This analysis consisted of a volume-to-capacity ratio evaluation of selected freeway ramps. The ramp capacities were obtained from the *Highway Capacity Manual 2000* and consider both the free-flow speed and the number of lanes on the ramp, and in some instances the ramp metering rate.

Freeway Segment Analysis Methodology

As prescribed in the CMP technical guidelines, the level of service for freeway segments is estimated based on vehicle density. Density is calculated by the following formula:

$$D = V / (N \cdot S)$$

Where:

D = density, in vehicles per mile per lane (vpmpl)

V = peak hour volume, in vehicles per hour (vph)

N = number of travel lanes

S = average travel speed, in miles per hour (mph)

The vehicle density on a segment is correlated to level of service as shown in Table 2. The CMP specifies that a capacity of 2,300 vehicles per hour per lane (vphpl) be used for mixed-flow lane segments that are three lanes or wider in one direction, and a capacity of 2,200 vphpl be used for mixed-flow lane segments that are two lanes wide in one direction. A capacity of 1,650 vphpl was used for high occupancy vehicle (HOV) lanes. The CMP defines an acceptable level of service for freeway segments as LOS E or better. The freeway segment analysis is presented for informational purposes.

Table 2
Freeway Segment Level of Service Definitions Based on Density

Level of Service	Description	Density (vehicles/mile/lane)
A	Average operating speeds at the free-flow speed generally prevail. Vehicles are almost completely unimpeded in their ability to maneuver within the traffic stream.	11.0 or less
B	Speeds at the free-flow speed are generally maintained. The ability to maneuver within the traffic stream is only slightly restricted, and the general level of physical and psychological comfort provided to drivers is still high.	11.1 to 18.0
C	Speeds at or near the free-flow speed of the freeway prevail. Freedom to maneuver within the traffic stream is noticeably restricted, and lane changes require more vigilance on the part of the driver.	18.1 to 26.0
D	Speeds begin to decline slightly with increased flows at this level. Freedom to maneuver within the traffic stream is more noticeably limited, and the driver experiences reduced physical and psychological comfort levels.	26.1 to 46.0
E	At this level, the freeway operates at or near capacity. Operations in this level are volatile, because there are virtually no usable gaps in the traffic stream, leaving little room to maneuver within the traffic stream.	46.1 to 58.0
F	Vehicular flow breakdowns occur. Large queues form behind breakdown points.	greater than 58.0

Report Organization

This report has a total of five chapters. Chapter 2 describes existing transportation conditions including the existing roadway network, transit service, and bicycle and pedestrian facilities. Chapter 3 describes the CEQA transportation analysis, including the project VMT impact analysis and a cumulative transportation impact assessment. Chapter 4 describes the local transportation analysis including operations of study intersections, the methods used to estimate project-generated traffic, the project's effects on the study intersections, and an analysis of other transportation issues including freeway segment capacity analysis, freeway ramp operations, intersection vehicle queuing, site access and circulation, parking, and potential project effects on transit services, and bicycle and pedestrian facilities. Chapter 5 presents the conclusions of the transportation analysis.

2. Existing Conditions

This chapter describes the existing conditions for transportation facilities in the vicinity of the site, including the roadway network, transit service, pedestrian and bicycle facilities, and the existing levels of service of the key intersections in the study area.

Existing Roadway Network

Regional access to the project site is provided via California State Route 17 (SR 17), Interstate 280 (I-280), and Interstate 880 (I-880). Local access to the project site is provided via Bascom Avenue, Moorpark Avenue, Leigh Avenue, Fruitdale Avenue, Laswell Avenue, Kingman Avenue, and Leland Avenue.

SR 17 is a six-lane freeway in the vicinity of the site. SR 17 extends northward to the I-280 and I-880 interchange in San Jose and southward to State Route 1 in Santa Cruz. North of the I-280 and I-880 interchange, SR 17 transitions to I-880. Access to and from the site is provided via the I-880 and I-280 interchange, and interchanges at Moorpark Avenue and Parkmoor Avenue.

I-280 is an eight-lane freeway in the vicinity of the site. I-280 extends northward through San Francisco and southward to US 101 in San Jose. East of US 101, it makes a transition into I-680 to Oakland. Access to and from the site is provided via the I-880 and SR 17 interchange, and interchanges at Moorpark Avenue and Parkmoor Avenue.

I-880 is a six-lane freeway in the vicinity of the site. I-880 extends northward through Oakland and southward to SR 17 and I-280 interchange. South of the SR 17 and I-280 interchange, I-880 transitions to SR 17. Access to and from the site is provided via the SR 17 and I-280 interchange, and interchanges at Moorpark Avenue and Parkmoor Avenue.

Bascom Avenue is a six-lane arterial that runs in the north-south direction in the vicinity of the site. The street has left-turn pockets provided at intersections, center medians, and parking allowed on both sides. Bascom Avenue extends northward to Newhall Street where it transitions to Washington Street and extends southward to Samaritan Drive where it transitions to Los Gatos Boulevard. Bascom Avenue includes sidewalks on both sides of the street and has a posted speed limit of 35 mph near the project site. Bascom Avenue provides access to the project site via its intersections with Moorpark Avenue and Kingman Avenue and direct access to the site via the driveway at the Technology Center (southeast corner of the Bascom Avenue/Moorpark Avenue intersection).

Moorpark Avenue is an east-west arterial that runs north of the site from Williams Road/Gullo Avenue in the west to Kingman Avenue in the east. It is a two-way four-lane street west of Bascom Avenue and a one-way three lane street between Bascom Avenue and Menker Avenue and again two-way two-lane street east of Menker Avenue. Moorpark Avenue has continuous sidewalks along the south side of the street and gaps in sidewalks along the north side of the street near the site. East of Bascom Avenue, Moorpark Avenue has a posted speed limit of 35 mph and parking is allowed along the south side and north side except between the I-280 off-ramp and Leland Avenue near the project. Bicycle lanes are present west of Thornton Way. Moorpark Avenue provides direct access to the project site via three driveways and its intersection with Laswell Avenue and Leland Avenue (Ceremonial Entry).

Leigh Avenue is a two to four lane north-south street in the vicinity of the project site. Leigh Avenue extends from W San Carlos Street in the north to Blossom Hill Road in the south. Leigh Avenue has continuous sidewalks and parking allowed on both sides and has a designated speed limit of 35 mph. Bicycle lanes are present on both sides of Leigh Avenue near the project site. Leigh Avenue provides direct access to the project site.

Fruitdale Avenue is an east-west arterial that runs south of the site from Enborg Lane in the west to Avis Drive in the east. It is a four-lane street east of Bascom Avenue, which continues as Enborg Lane west of Bascom Avenue. East of Bascom Avenue, Fruitdale Avenue has left-turn pockets provided at intersections, continuous sidewalks and parking allowed along both sides of the street, and a posted speed limit of 35 mph. Fruitdale Avenue provides access to the project site via its intersection with Bascom Avenue.

Leland Avenue is a two-lane north-south street that extends from W. San Carlos Street in the north to a project driveway in the south. The street has continuous sidewalks and parking allowed on both sides and has a designated speed limit of 25 mph. Leland Avenue provides direct access to the project site at the Ceremonial Entry on Moorpark Avenue.

Laswell Avenue is a two-lane north-south internal street, which extends from Moorpark Avenue in the north to the student parking lot E in the south. This internal driveway provides access to the west side campus parking lots.

Kingman Avenue is a two-lane east-west internal street that extends from South Bascom Avenue in the west to the student parking lot E in the east. This internal driveway provides access to the west side campus parking lots.

Existing Pedestrian and Bicycle Facilities

Existing Pedestrian and Bicycle Facilities

A complete network of sidewalks is present along the streets in the vicinity of the project site. Sidewalk is present along the east side of Laswell Avenue and the south side of Kingman Avenue. Marked crosswalks with pedestrian signal heads and push buttons are located at a minimum of three legs at all the signalized intersections. Marked crosswalks are also present at all unsignalized intersections in the vicinity of the project site. Overall, the existing network of sidewalks and crosswalks provides pedestrians with safe routes to the project site and transit stops.

The bicycle facilities that exist within one mile of the project site (see Figure 3) include bike lanes (Class II bikeway) and bike routes (Class III bikeway). Bike lanes are lanes designated for use by bicycles with special lane marking, pavement legends, and signage. Bike routes are streets shared by bikes and motor vehicles.

Class II bike lanes exist on the following roadways:

- Stevens Creek Boulevard between South Monroe Street and McArthur Avenue
- Monroe Street between Newhall Street and Moorpark Avenue
- Moorpark Avenue between Lawrence Expressway and Thornton Way
- South Bascom Avenue between Fruitdale Avenue and East Hamilton Avenue
- Leigh Avenue between Moorpark Avenue and Fruitdale Avenue
- Parkmoor Avenue between Leigh Avenue and Lincoln Avenue
- Southwest Expressway between Fruitdale Avenue and South Bascom Avenue
- Race Street between W. San Carlos Street and Parkmoor Avenue and Fruitdale Avenue and I-280 Westbound Off-ramps
- Lincoln Avenue between Minnesota Avenue and W. San Carlos Street

Class III bike routes exist on the following roadways:

- MacArthur Avenue between Stevens Creek Boulevard and Pfeffer Lane
- Scott Street between Patch Avenue and South Willard Avenue
- Pfeffer Lane between MacArthur Avenue and Moorpark Avenue
- Thornton Way between Moorpark Avenue and Downing Avenue
- South Monroe Street between Moorpark Avenue and Williams Road
- Williams Road between Winchester Boulevard to South Baywood Avenue
- Douglas Street between Willard Avenue and Meridian Avenue
- St. Elizabeth Drive between Fruitdale Avenue and Stokes Street
- Auzerais Avenue between Meridian Avenue and Woz Way

San Jose is currently in the process of updating its bike plan in the *San Jose Better Bike Plan 2025*.

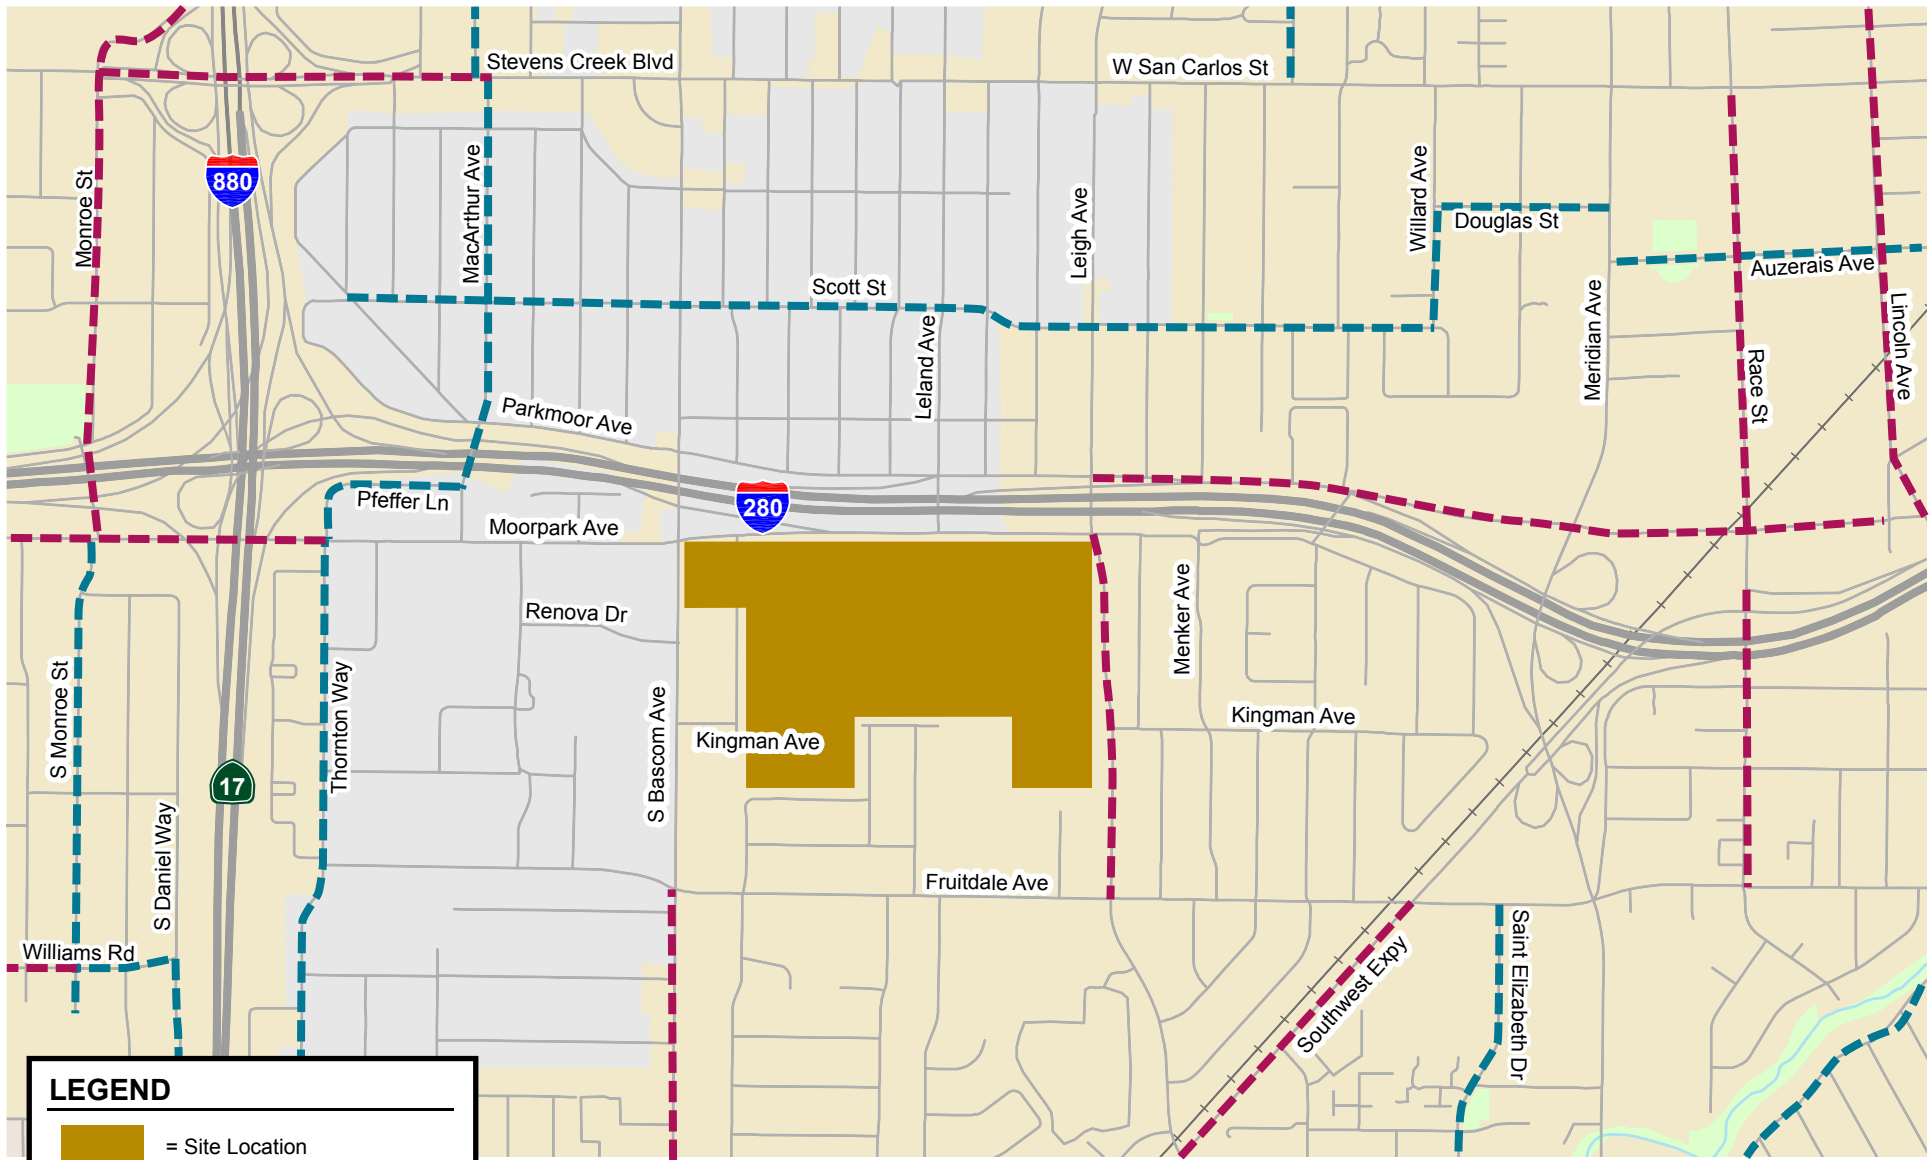

Figure 3
Existing Bicycle Facilities

Existing Transit Services

Existing transit service to the study area is provided by the VTA (see Figure 4 and Table 3). Four local VTA bus routes (Routes 23, 25, and 61), one rapid VTA bus route (Route 523), one VTA express bus route (Route 103), and one light rail train (LRT) route (Green Line) serve the vicinity of the project area, as described below. The bus stops closest to the project site are located on Bascom Avenue at Renova Drive and are served by VTA bus routes 25 and 61. Bus stops are also present along the project frontage on Leigh Avenue. These bus stops are not currently serviced since transit service near the project site is temporarily reduced due to COVID-19 and shelter-in-place.

Table 3
Existing Transit Service

Bus Route	Route Description	Closest Stop and Distance to Project Site	Weekday Hours of Operation ¹	Headway (minutes) ¹
Local Route 23	De Anza College - Alum Rock Station via Stevens Creek	San Carlos & Blossom; 3100 ft	5:30 AM - 12:40 AM	15 mins
Local Route 25	De Anza College - Alum Rock Station via Valley Med	Bascom & Renova; 780 ft Fruitdale & Blossom; 1250 ft	5:25 AM - 11:55 PM	15 mins
Local Route 61	Sierra & Piedmont - Good Samaritan Hospital	Bascom & Renova; 200 ft	5:20 AM - 10:55 PM	20 mins
Express Route 103	Eastridge - Stanford Research Park	Fruitdale Station; 2500 ft	5:05 AM - 8:25 AM 2:40 PM - 6:35 PM	25 to 80 mins
Rapid Route 523	Berryessa BART - Lockheed Martin via De Anza College	San Carlos & Blossom; 3100 ft	6:00 AM - 10:25 PM	30 mins
LRT Green Line	Old Ironsides - Winchester	Fruitdale Station; 2500 ft	5:20 AM - 12:40 AM	19 to 27 mins
1. Approximate weekday operation hours and headways during peak commute periods in the project area, as of October 2020.				

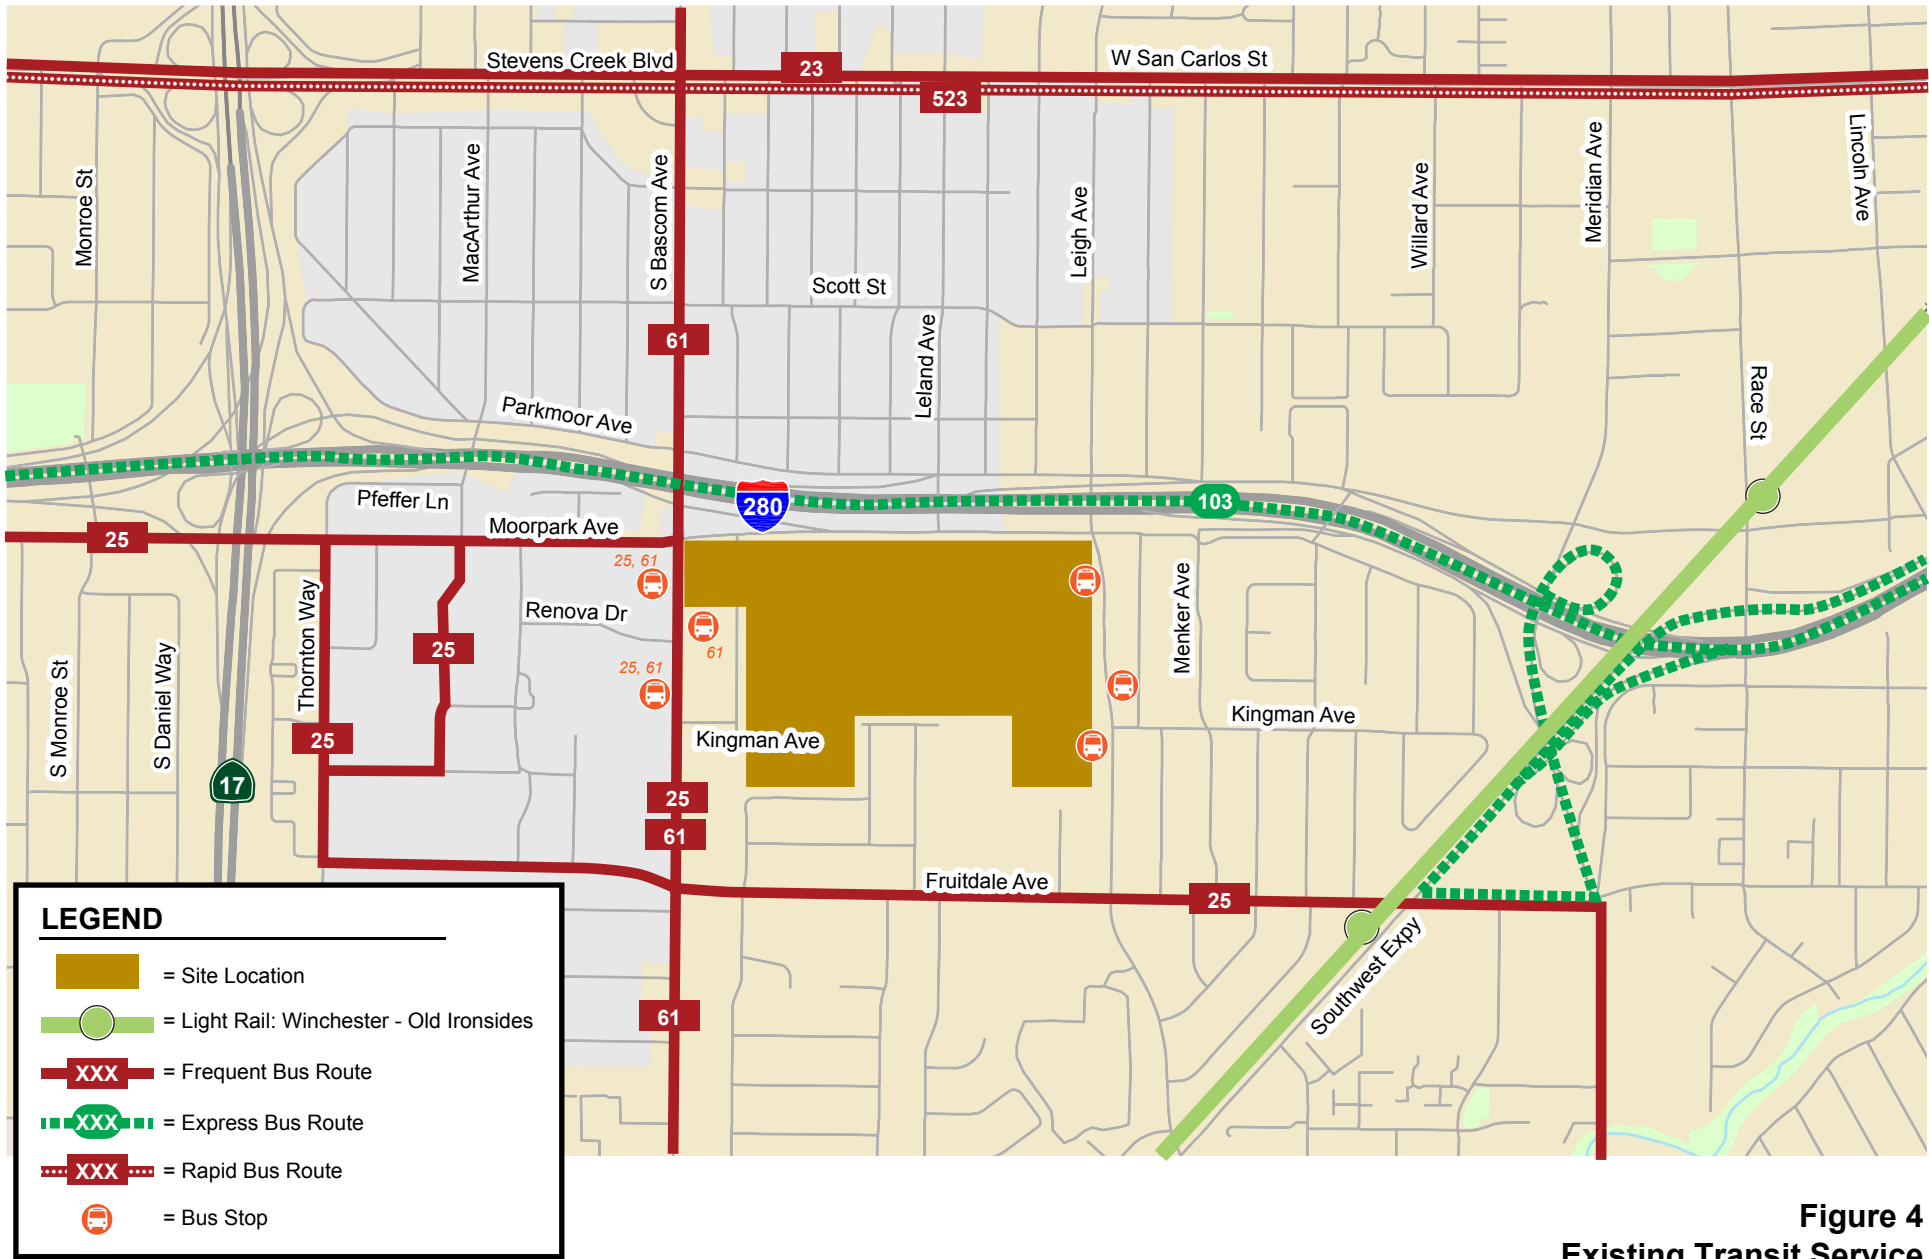

Figure 4
Existing Transit Service

Existing Intersection Lane Configurations

The existing lane configurations at the study intersections are shown on Figure 5.

Existing Traffic Volumes

Due to the COVID-19 pandemic, current traffic counts may not accurately reflect traffic conditions at the completion of the project. Existing traffic volumes at the study intersections were estimated using the following procedures:

- **Historical Traffic Counts.** Traffic counts at study intersections were obtained from the San Jose 2019 count database. PM peak hour traffic counts at CMP intersections were obtained from the Santa Clara County 2018 CMP database. A growth factor of 1% per year was applied to estimate 2020 conditions for counts older than two years.
- **Count Balancing.** Traffic counts estimated using the above methodologies were balanced for adjacent intersections: that is, the volume leaving one intersection was adjusted to match the volume approaching the adjacent intersection, subject to adjustments for intervening driveways or cross-streets.

Existing traffic volumes at the study intersections are shown in Figure 6. Traffic counts are included in Appendix A and traffic volumes are included in Appendix B.

Existing Intersection Traffic Operations

Intersection levels of service were evaluated against the standards of the City of San Jose. The results of the analysis show that the intersection of Bascom Avenue and Moorpark Avenue operates unacceptably at LOS E during the PM peak hour. All other signalized study intersections are currently operating at acceptable levels of service of D or better during the AM and PM peak hours of traffic (see Table 4).

The intersection levels of service calculation sheets are included in Appendix C.

Table 4
Existing Intersection Levels of Service

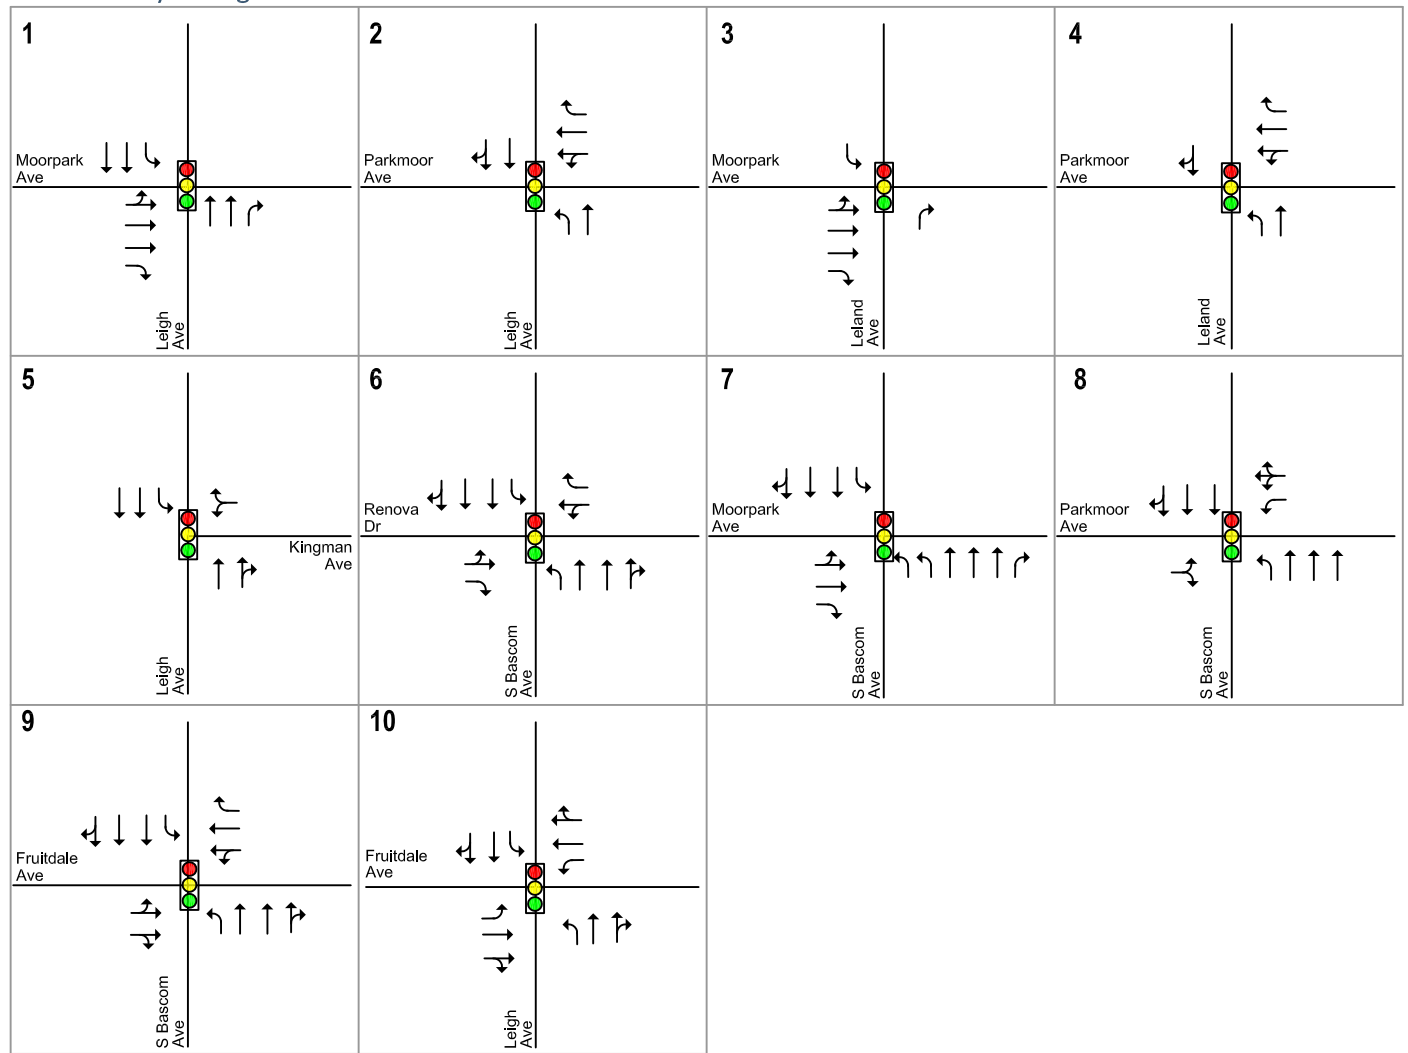

#	Intersection	Peak Hour	Count Date	Existing Conditions	
				Avg. Delay (sec)*	LOS
1	Leigh Avenue and Moorpark Avenue	AM	10/12/16	28.6	C
		PM	10/12/16	18.2	B-
2	Leigh Avenue and Parkmoor Avenue	AM	10/12/16	28.4	C
		PM	10/12/16	22.4	C+
3	Leland Avenue and Moorpark Avenue	AM	9/14/11	9.5	A
		PM	9/14/11	13.5	B
4	Leland Avenue and Parkmoor Avenue	AM	10/26/16	20.7	C+
		PM	10/26/16	23.9	C
5	Leigh Avenue and Kingman Avenue	AM	9/13/18	13.4	B
		PM	9/13/18	13.5	B
6	Bascom Avenue and Renova Drive	AM	10/4/12	16.2	B

CEQA Transportation Analysis

This chapter describes the CEQA transportation analysis, including the project VMT analysis, and cumulative transportation analysis.

Project Level VMT Analysis

The effect on VMT by increasing the student enrollment by 2,029, from 8,706 today to 10,735 by the year 2030 at SJCC was evaluated with the City of San Jose's Travel Demand Forecasting (TDF) model using existing (2015) and year 2030 land use and demographic projections. Table 5 presents a summary of the results. Note that faculty and staff trips are also included in the totals.

Table 5
VMT Analysis

VMT Analysis	2015 No Project	2030 with Project	Difference
Number of students	8,706	10,735	2,029
Vehicle Mode Share	81%	78%	-3%
Number of Daily Student Vehicle Trips	6,569	7,780	1,211
Daily Student VMT	49,178	58,435	9,257
Daily VMT per Student	5.65	5.44	-0.21

The table shows that the daily VMT per student would decrease by 0.21, from 5.65 VMT under existing conditions to 5.44 VMT by 2030, therefore not causing a significant VMT impact. The reason for this reduction in VMT is two-fold: (1) The expected improved transit service in the area by 2030 would result in higher transit and lower vehicle mode shares as shown in Table 5, and (2) the student population in the area would grow at a higher rate than the student enrollment at SJCC: that is, the enrollment at SJCC would increase by 23 percent, while the number of students living within 10 miles of the SJCC campus would increase by 34 percent by 2030. This is expected to lead to a decrease in student trip lengths and, hence, an overall decrease in VMT per student.

Cumulative VMT Impact Analysis

Projects must demonstrate consistency with the *Envision San Jose 2040 General Plan* to address cumulative impacts. Consistency with the City's General Plan is based on the project's density, design, and conformance to the General Plan goals and policies. If a project is determined to be inconsistent with the General Plan, a cumulative impact analysis is required as part of the City's *Transportation Analysis Handbook*.

The project is consistent with the General Plan goals and policies for the following reasons:

- The project site is located adjacent to bus stops on Bascom Avenue and Leigh Avenue.
- The project would slightly increase the employment density in the project area, and the proposed density would be consistent with the General Plan Land Use Designation.
- The project would provide improvements to pedestrian connectivity in the vicinity of the project site.

Therefore, based on the project description, the proposed project would be consistent with *Envision San Jose 2040 General Plan*. The project would be considered as part of the cumulative solution to meet the General Plan's long-range transportation goals and would result in a less-than-significant cumulative impact.

4.

Local Transportation Analysis

This chapter describes the local transportation analysis including the method by which project traffic is estimated, intersection operations analysis for background plus project conditions, any adverse intersection traffic effects caused by the project, intersection vehicle queuing analysis, freeway segment capacity analysis, freeway ramp operations, site access and on-site circulation review, effects on bicycle, pedestrian, and transit facilities.

Intersection Operations Analysis

The San Jose intersection analysis methodology and standards are described in Chapter 1.

Project Trip Estimates

Trip Generation

Vehicle trips generated by the project were estimated using the trip rates published in the Institute of Transportation Engineers' (ITE) Trip Generation Manual, 10th Edition (2017) for "Junior/Community College" (Land Use 540) located in a general Urban/Suburban area. Table 6 shows that the project would generate 223 trips (181 inbound and 42 outbound) during the AM peak hour and 223 trips (125 inbound and 98 outbound) during the PM peak hour.

Trip Adjustments and Reductions

In accordance with San Jose's *Transportation Analysis Handbook* (April 2020, Section 4.8, "Intersection Operations Analysis"), the project is eligible for adjustments and reductions to the baseline trip generation. Based on the 2020 San Jose guidelines, the project qualifies for a location-based adjustment. The location-based adjustment reflects the project's vehicle mode share based on the "place type" in which the project is located per the San Jose Travel Demand Model. The project's place type was obtained from the San Jose VMT Evaluation Tool. Based on the VMT Evaluation Tool, the project site is located within a designated Urban Low-Transit place type. Therefore, the baseline project trips were adjusted to reflect an Urban Low-Transit mode share.

Office developments within Urban Low-Transit areas have a vehicle mode share of 91 percent (according to Table 6 of the City's *Transportation Analysis Handbook*). It is assumed that the SJCC will have similar commuting patterns as that of an office. Thus, a 9 percent reduction was applied to the

project trip generation estimates based on the location-based vehicle mode share outputs produced from the San Jose Travel Demand Model.

Net Project Trips

After applying the ITE trip rates to the proposed project and applying the appropriate trip adjustments, it is estimated that the project would generate a net of 203 trips (165 inbound and 38 outbound) in the AM peak hour and 203 trips (114 inbound and 89 outbound) in the PM peak hour (See Table 6).

Table 6
Project Trip Generation Estimates

Land Use	Size	AM Peak Hour				PM Peak Hour			
		Rate	Trip			Rate	Trip		
			In	Out	Total		In	Out	Total
Proposed Land Uses									
Junior/Community College	2,029 Students	0.110	181	42	223	0.110	125	98	223
Location-Based Vehicle Mode Share (9%) ²			(16)	(4)	(20)		(11)	(9)	(20)
Net Project Trips			165	38	203		114	89	203
Source: ITE Trip Generation Manual, 10 th Edition 2017									
Notes:									
1. Junior/Community College (Land Use 540), average rates expressed in trips per student are used.									
2. The project site is located within an urban low-transit area based on the City of San Jose VMT Evaluation Tool (February 28, 2019). A 9% reduction was applied based on the office location-based vehicle mode share percentage outputs from Table 6 of the City of San Jose Transportation Analysis Handbook 2020 (TA Handbook). It is assumed that the college will have similar commute travel patterns to an office.									

Trip Distribution and Assignment

The trip distribution pattern for the project was estimated based on existing travel patterns on the surrounding roadway system and the locations of complementary land uses. The peak-hour vehicle trips associated with the project were added to the roadway network in accordance with the trip distribution pattern, the roadway network connections, and the locations of the campus driveways. Driveways providing access to the campus parking are located along Bascom Avenue, Moorpark Avenue, and Leigh Avenue. Project trips were assigned to the campus driveways based on the proportion of parking spaces each of the driveways would provide access to. Trip distribution and trip assignment are shown on Figure 7 and Figure 8, respectively. Figure 9 shows the trip assignment at the project driveways.

Roadway Network and Traffic Volumes under Background Conditions

The roadway network under background conditions is the same as the roadway network under existing conditions. Under background conditions, the approved but not yet constructed trips will be added to existing volumes. The added traffic from approved but not yet constructed developments was obtained from the City of San Jose and is included in Appendix D. Background traffic volumes are shown on Figure 10.

Roadway Network and Traffic Volumes under Background plus Project Conditions

The facilities master plan proposes the addition of a new driveway at Leigh Avenue and Kingman Avenue and the removal of turning movement restrictions at Leland Avenue and Moorpark Avenue. Leland Avenue and Moorpark Avenue, which is the ceremonial entry of the campus, does not allow southbound through and northbound through movements from Leland Avenue into and out of the campus. The master plan proposes to remove these through movement restrictions and make the

intersection a three-way signal. Moorpark Avenue would remain as one-way eastbound only. The master plan also proposes the following new internal roadway connections (see Figure 2):

- New internal east-west roadway connection parallel to Moorpark Avenue connecting the parking lots along the northern portion of the campus
- Extension of Kingman Avenue to the east connecting Bascom Avenue and Leigh Avenue and the parking lots along the southern portion of the campus
- New North-south roadway in the eastern portion of the campus connecting Kingman Avenue to Moorpark Avenue.
- Conversion of portions of Laswell Avenue to pedestrian, service, and emergency vehicle access only.

Existing campus trips were redistributed to reflect changes in travel patterns that would occur due to the proposed change in vehicular access and internal circulation. Project trips were added to adjusted background trips for background plus project volumes. Background plus project traffic volumes are shown on Figure 11.

Intersection Traffic Operations under Background and Project Conditions

Intersection traffic operations at the study intersections were evaluated against the City of San Jose level of service standard (LOS D). The results of the intersection level of service analysis (see Table 7) show that the intersection of Bascom Avenue and Moorpark Avenue would operate unacceptably at LOS E during the PM peak hour under background conditions. Under background plus project conditions, the intersection would continue to operate at an LOS E with an increase in critical delay of 1.2 seconds and a reduction in critical V/C of 0.058. The changes in critical delay and critical V/C due to the project at the intersection do not meet the City of San Jose's criteria for adverse effect.

All of the other signalized study intersections would operate at an acceptable level of service, LOS D or better, during the AM and PM peak hours under background and background plus project conditions.

The intersection level of service calculation sheets are included in Appendix C.

Table 7
Background Plus Project Intersection Levels of Service

#	Intersection	Peak Hour	Background Conditions				
			No Project		with Project		
			Avg. Delay (sec)*	LOS	Avg. Delay (sec)*	LOS	Incr. in Critical Delay (sec)

		PM	28.9	C	28.8	C	-0.6

Note:

* Delays based on average delay for signalized intersections.

A growth factor of 1% was applied per year from previous existing count date if older than 2018 to estimate new count data.

Bold indicates a substandard level of service.

Vehicle Queuing Analysis

The analysis of intersection levels of service was supplemented with a vehicle queuing analysis for left-turn lanes and stop-controlled approaches at intersections where the project would add a substantial number of trips to the left-turn movements of signalized intersections (See Table 8) or stop-controlled approaches for driveways (Table 9) as compared to background conditions. This analysis provides a basis for estimating future storage requirements at the intersections under background conditions. Vehicle queues were estimated using Poisson probability distribution, described in Chapter 1. The following movements were selected for evaluation:

- Leigh Avenue and Fruitdale Avenue – Eastbound left-turn lane
- Leland Avenue and Parkmoor Avenue – Northbound left-turn lane
- Leigh Avenue and Kingman Avenue – Northbound left-turn lane and Eastbound shared left-through-right turn lane under project conditions
- Bascom Avenue and Kingman Avenue – Southbound left-turn lane and Westbound shared left-through-right turn lane

Notes: SB = southbound; NB = northbound; EB = eastbound; WB = westbound; L/T/R = shared left-through-right ¹ Vehicle queue calculations for signalized intersections based on cycle length. ² Assumes 25 Feet Per Vehicle Queued.								

Leigh Avenue and Fruitdale Avenue

Under background conditions, the eastbound left-turn movement at Leigh Avenue and Fruitdale Avenue was calculated to have insufficient storage during the AM peak hour. The eastbound left-turn storage was measured from the Leigh Avenue and Fruitdale Avenue intersection to Di Fiore Drive. The estimated 95th percentile queue during the AM peak hour was calculated to exceed the storage length by two vehicles. The addition of project trips to this movement would increase the 95th percentile queue by one vehicle. There is additional left-turn storage west of Di Fiore Drive, which would be able to accommodate the 95th percentile queue under background and background plus project conditions.

Leland Avenue and Parkmoor Avenue

Under background conditions, the northbound left-turn movement at Leland Avenue and Parkmoor Avenue was calculated to have insufficient storage during the PM peak hour. The estimated 95th percentile queue during the PM peak hour was calculated to exceed the storage length by two vehicles. The addition of project trips to this movement would increase the 95th percentile queue by two vehicles.

Recommendation:

An intersection reconfiguration and a three-way signal is being proposed at Leland Avenue and Moorpark Avenue, which is immediately south of Leland Avenue and Parkmoor Avenue. Signal coordination is recommended between Leland Avenue and Moorpark Avenue and Leland Avenue and

Parkmoor Avenue to reduce the 95th percentile queue for the northbound left-turns at Leland Avenue and Parkmoor Avenue.

Leigh Avenue and Kingman Avenue

Under background conditions, Leigh Avenue and Kingman Avenue operates as a T-intersection with north, south, and east legs. Under project conditions, an all-access driveway would be added as a west leg. The new eastbound movement would operate as a shared left-through-right. The storage length for the eastbound movement is measured from Leigh Avenue and Kingman Avenue to an internal intersection. The northbound movements would be reconfigured to have a left-turn lane, a through lane, and a shared through-right lane. The storage length of the northbound left-turn movement is assumed to be 125 feet. The 95th percentile queue would not exceed the storage length of these movements under project conditions.

Recommendation:

A northbound left-turn movement does not currently exist at this intersection. When this intersection is reconfigured under project conditions, a minimum storage length of 125 feet is recommended for this movement to accommodate the 95th percentile queue during the peak hours.

Bascom Avenue and Kingman Avenue

Kingman Avenue at Bascom Avenue is a stop-controlled driveway that provides access to the campus. Under background conditions, the westbound shared left-through-right movement was calculated to have insufficient storage during the AM peak hour. The storage length is calculated back to the intersection of Laswell Avenue. The estimated 95th percentile queue during the AM peak hour was calculated to exceed storage length by one vehicle. Under project conditions, the 95th percentile queue during the AM peak hour for the southbound left-turn movement was calculated to exceed the storage length by one vehicle and the westbound shared left-through-right movement was calculated to exceed the storage length by six vehicles. The increase in the 95th percentile southbound left-turn queue during the AM peak hour cannot be accommodated under project conditions since the queue would spillover onto the southbound through lane. The increase in the 95th percentile westbound shared left-through-right queue would result in vehicles queued onto Laswell Avenue.

Recommendation

If feasible, Kingman Avenue should be widened to two outbound lanes. This would reduce the westbound queue, which could be accommodated on Kingman Avenue.

CMP Analysis

Freeway Segment Analysis

Since the project is expected to add more than 100 net new peak-hour vehicle trips to the roadway network, a Congestion Management Program (CMP) freeway analysis was prepared to be consistent with the methodologies set forth in the VTA's Transportation Impact Analysis Guidelines (2014). This section describes the existing and future operations of the freeway segments in the study area. The freeway segment analysis was prepared for informational purposes.

The following freeway segments were evaluated for level of service:

- I-280, between Winchester Avenue and I-880
- I-280, between Meridian Avenue and I-880
- SR 17, between Enborg Lane and I-280
- I-880, between Forest Avenue and I-280

Existing Freeway Segment Levels of Service

Traffic volumes for the 4 study freeway segments were obtained from the 2018 CMP Annual Monitoring Report, which contains the most recent data collected for freeway segments located in Santa Clara County. The results of the evaluation (see Table 10) show that mixed-flow lanes on 7 directional study freeway segments currently operate at an unacceptable LOS F during at least one of the peak hours of traffic. The results also show that 4 directional HOV lane segments analyzed currently operate at an unacceptable LOS F during at least one of the peak hours. As described in Chapter 1, the CMP defines an acceptable level of service for freeway segments as LOS E or better.

Freeway Segment Levels of Service Under Project Conditions

The results of the freeway segment level of service analysis show that the project would not cause substantial increases in traffic volumes (one percent or more of freeway capacity) on any of the study freeway segments currently operating at an unacceptable LOS F, and none of the study freeway segments currently operating at an acceptable LOS E or better would worsen to LOS F as a result of the project (see Table 10).

Table 10
Freeway Segment Analysis

Freeway Ramp Analysis

A freeway ramp analysis was performed in order to verify that the freeway ramps would have sufficient capacity to serve the expected traffic volumes with and without the project. This analysis consisted of a volume-to-capacity ratio evaluation of selected freeway ramps. The ramp capacities were obtained from the *Highway Capacity Manual 2000* and consider both the free-flow speed and the number of lanes on the ramp, and in some instances the ramp metering rate. As shown in Table 11 and Table 12 below, the freeway ramps would continue to operate at acceptable levels or service with the addition of project traffic.

Table 11
Freeway Ramp Analysis – Existing Conditions

² Peak-hour volumes are obtained from Caltrans.

³ As a conservative approach, if an on-ramp has meter equipment present, the ramp is analyzed assuming it is metered.

Vehicular Access and Circulation

The site access and circulation evaluation is based on the *San Jose City College Facilities Master Plan, January 2016*. Site access and on-site vehicular circulation were reviewed in accordance with generally accepted traffic engineering standards.

Site Access and Circulation

The campus parking can be accessed by two driveways on Bascom Avenue, five driveways on Moorpark Avenue, including the ceremonial entry at Leland Avenue, and one driveway on Leigh Avenue. Under project conditions, a new driveway would be added at Leigh Avenue and Kingman Avenue, and turning movement restrictions would be removed at Leland Avenue and Moorpark Avenue. Leland Avenue and Moorpark Avenue does not allow southbound through and northbound through movements from Leland Avenue into and out of the campus. Under project conditions these through movement restrictions would be removed, and the intersection would operate as a three-way signal. Moorpark Avenue would remain as one-way eastbound only (see Figure 11).

New internal roadway connections would also be added under project conditions to improve internal circulation between the campus parking and access and egress from the campus. Currently, the parking lots along the northern portion of the campus are disconnected. In order to move between parking lots, vehicles have to exit the parking lot onto Moorpark Avenue and enter through the next driveway. Under project conditions, a new internal east-west perimeter loop road parallel to Moorpark Avenue connecting the parking lots along the northern portion of the campus would be added. Additionally, Laswell Avenue, which connects the parking lots in the north and the south of the campus cuts through the main pedestrian spine of the campus. Portions of Laswell Avenue would be blocked and would be converted to pedestrian, service, and emergency vehicle access only to improve pedestrian safety. Instead, a north-south roadway in the eastern portion of the campus connecting Kingman Avenue to Moorpark Avenue would be added. Finally, Kingman Avenue would be extended to the east along the southern edge of the campus to connect Bascom Avenue and Leigh Avenue.

Driveway Operations

Under project conditions, seven campus driveways would operate as two-way-stop-controlled (TWSC) intersections, and two campus driveways would operate as signalized intersections. The Bascom Avenue and Kingman Avenue driveway would operate as an all-access driveway, and the Bascom Avenue & Lot A Driveway would operate as a right-in and right-out only driveway. Since Moorpark Avenue is one-way eastbound only, driveways from Moorpark Avenue providing access to parking lots A, B, and Laswell Avenue operate as right-in and right-out only driveways. The driveway at parking lot C currently provides only right-out egress onto Moorpark Avenue. The Moorpark Avenue and Leland Avenue intersection, which is the ceremonial entry to the campus, would operate as an eastbound right-in, southbound through-in, northbound through-out, and northbound right-out signalized driveway. The driveway from Leigh Avenue to parking lots D, E, and F would operate as a right-in and right-out only driveway due access restrictions. There is a fire station directly across this entry on the east side of Leigh Avenue limiting access at this driveway. The new Kingman Avenue and Leigh Avenue driveway would operate as an all-access signalized driveway.

Estimated total campus traffic volumes with the project at the driveways are shown on Figure 12. Traffic operations at the driveways were evaluated using Traffix. The results of the driveway level of service analysis (see Table 13) shows that left turns exiting Kingman Avenue at Bascom Avenue would operate at LOS F during the AM peak hour under background plus project conditions. The heavy northbound volumes on Bascom Avenue cause high delays for the westbound traffic exiting the campus. However, the exiting volume is fewer than 100 trips. The proximity of this driveway to the existing 4-way

signalized intersection at Renova Drive prohibits the introduction of an additional signal at Kingman Avenue. Typically, when facing high delays, vehicles will reroute and use a different driveway. Outbound vehicles wishing to head south on Bascom Avenue may instead turn right from Kingman Avenue and make a U-turn at Renova Drive.

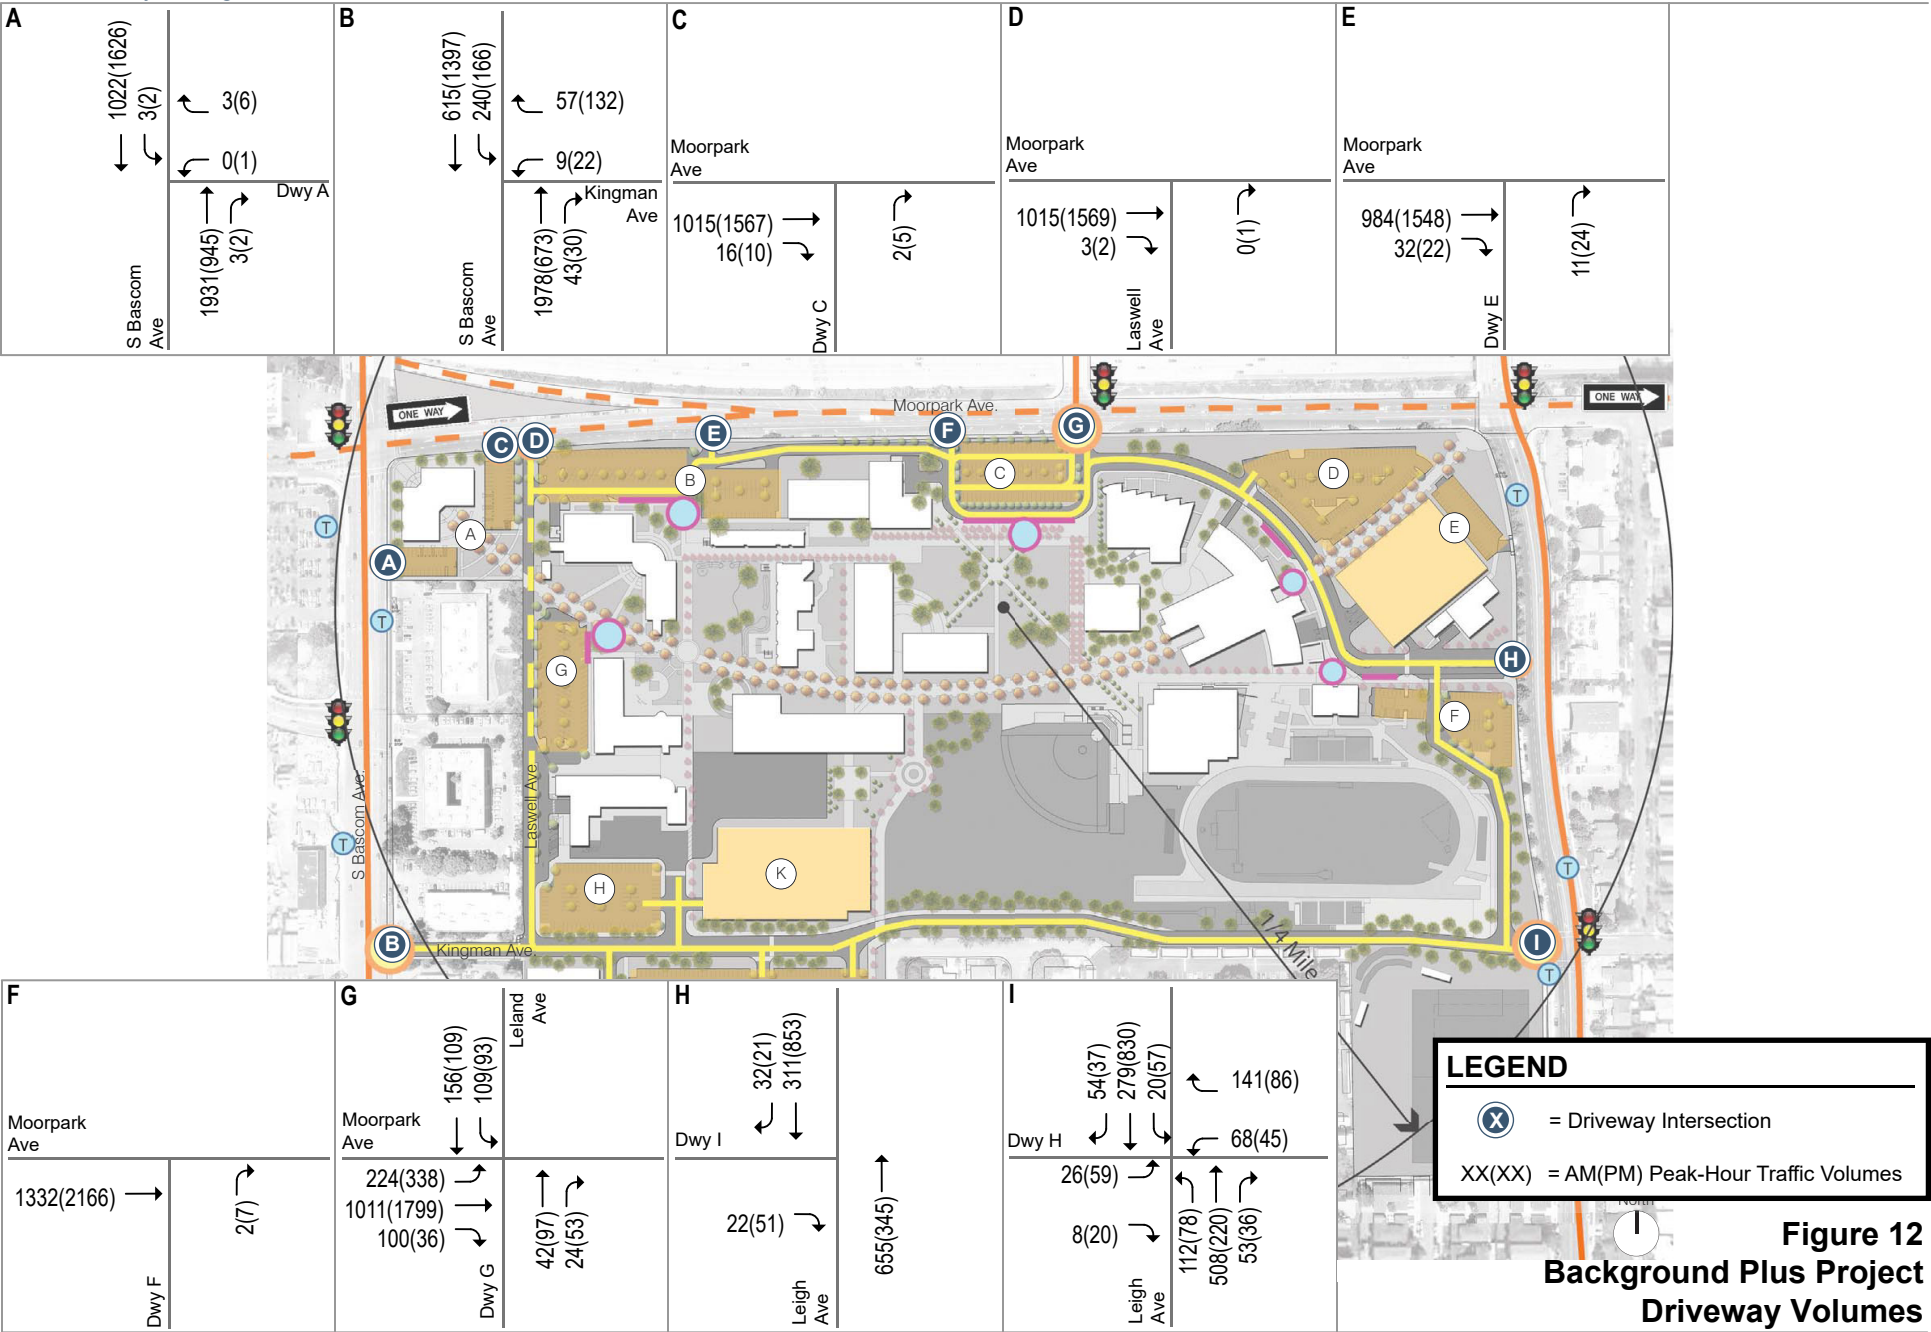

As recommended previously, Kingman Avenue should be widened to two outbound lanes – a left-turn only lane and a right-turn only lane if possible. Although the westbound movement would still operate at LOS F, it would improve the delay for this movement.

The driveway level of service calculation sheets are included in Appendix C.

Table 13
Driveway Operations

#	Intersection	Peak Hour	Signal Control	Background Plus Project	
				Delay (sec)*	LOS
A	Bascom Avenue & Lot A Driveway	AM	TWSC ¹	13.6	B

		PM		11.8	B
I	Leigh Avenue & Kingman Avenue	AM	Signal ²	8.7	A
		PM		7.0	A

Note:
 TWSC = Two-Way Stop Control
¹ Delays based on worst approach for TWSC intersections
² Delays based on average delay for signalized intersections.
Bold indicates a substandard level of service.

Sight Distance at Project Driveways

Driveway locations were evaluated to determine if the sight distance at the driveways would be adequate. Driveways should be free and clear of any obstructions to optimize sight distance, thereby ensuring that exiting vehicles can see pedestrians on the sidewalk and other vehicles traveling on adjacent roadways. Any landscaping and signage should be located in such a way as to ensure an unobstructed view for drivers entering and exiting the site. Adequate sight distance reduces the likelihood of a collision at driveways and provides drivers with the ability to locate sufficient gaps in traffic to exit a driveway. Sight distance of a driveway is evaluated based on the stopping sight distance recommended by Caltrans for a given design speed. Bascom Avenue, Moorpark Avenue, and Leigh Avenue have posted speed limits of 35 mph for which the Caltrans stopping sight distance is 250 feet.

- **Driveways along Bascom Avenue** - The Lot A Driveway is a right-in and right-out driveway. A driver must be able to see 250 feet to the south to locate a sufficient gap to turn out of the driveway. Bascom Avenue and Kingman Avenue is an all-access driveway. A driver must be able to see 250 feet north and south of the driveway to locate a sufficient gap to turn out of the driveway. There is a 250-foot no parking zone south the Lot A Driveway, a 150-foot no parking zone south of Kingman Avenue, and a 60-foot no parking zone north of Kingman Avenue. As shown on the site plan, the project does not propose tall vegetation or objects that would block a driver's ability to see 250 feet north and south on Bascom Avenue. Therefore, sight distance at these driveways is adequate.
- **Driveways along Moorpark Avenue** – Moorpark Avenue is a one-way eastbound only roadway. A driver must be able to see 250 feet to the west to locate a sufficient gap to turn out of driveways on this road. Currently, the south side and portions of the north side of Moorpark Avenue allow parking. Per the City of San Jose's *Better Bike Plan 2025*, the parking will be removed, and a protected bike lane will be installed. As shown on the site plan, the project does not propose tall vegetation or objects that would block a driver's ability to see 250 feet east on Moorpark Avenue. This will provide adequate sight distance for vehicles exiting the driveways.

There is an eastbound I-280 off-ramp that exits to Moorpark Avenue about 400 feet before the campus entrance at Leland Avenue. Vehicles exiting the off-ramp have to cross three travel lanes in a very short distance to enter the campus at Leland Avenue, creating unsafe conditions.

Recommendation:

It is recommended that a median island be installed along the full length of the right-turn lane into the campus on Moorpark Avenue to prevent vehicles from the off-ramp accessing this lane as shown in Figure 13. Off-ramp vehicles would be forced to travel farther along Moorpark Avenue to Leigh Avenue to enter the campus. The driveway egress from parking Lot C onto Moorpark Avenue should be closed to prevent a conflict with the vehicles in the right turn lane. Vehicles in parking Lot C can exit the campus at Leland Avenue and Moorpark Avenue, which would operate well under background plus project conditions.

- **Driveways along Leigh Avenue** – The Lot F Driveway is a right-in and right-out driveway. A driver must be able to see 250 feet to the north to locate a sufficient gap to turn out of the driveway. There is a no parking zone north of the driveway to Moorpark Avenue. As shown on the site plan, the project does not propose tall vegetation or objects that would block a driver's ability to see 250 feet north on Leigh Avenue. Therefore, sight distance at this driveway is adequate. Leigh Avenue and Kingman Avenue would become an all-access signalized driveway. The project does not propose tall vegetation or objects that would block a driver's

ability to see 250 feet north and south on Leigh Avenue. Therefore, sight distance at this driveway is also adequate.

Driveway Design

According to the City of San Jose Geometric Guidelines, the width of a two-way driveway should be a minimum of 20 feet. All existing project driveways meet this requirement.

Recommendation:

Leigh Avenue and Kingman Avenue should be designed according to the City of San Jose Geometric Guidelines as shown on Figure 14.

Service and Emergency Vehicle Access

Facilities requiring service vehicle access would be distributed in multiple locations on campus as shown in Figure 15. Based on the location of these facilities, service vehicle access would be provided from the perimeter loop road in the north and the Kingman Avenue extension in the south. Service vehicles would share the roadway with pedestrians along the main pedestrian spine along Laswell Avenue.

Figure 15
Service and Emergency Vehicular Access

Pedestrian, Bicycle and Transit Facilities

Pedestrian Facilities

The project proposes several improvements that would increase pedestrian safety within the SJCC campus as listed below:

- Rideshare drop-off locations would be provided in parking Lots B and G. An expanded drop-off location would also be provided at the ceremonial Leland Avenue entrance. This drop-off would serve as a pedestrian gateway into campus. Drop-off locations currently exist at the Leland Avenue entrance, opposite parking Lot D, and opposite parking Lot E.
- The primary east-west pedestrian spine through the campus would be completed from edge to edge. This path would support a high volume of pedestrian traffic and would integrate pedestrian traffic with the proposed parks and gathering spaces on the campus.
- Portions of Laswell Avenue would be converted to pedestrian and “service / emergency only” access and would be blocked to vehicular traffic as previously noted. The Laswell Avenue segment north of Kingman Avenue and south of the pedestrian spine would be improved to provide a north-south pedestrian connection between the student parking in the southwest quadrant and the core of campus.
- An improved north-south pedestrian connection would be provided along the center of the campus to the parking lots in the southern portion of the campus.
- The eastern portion of the primary east-west pedestrian spine path with an entrance into the parking lots at Leigh Avenue would be improved for pedestrians.
- Overall, all pedestrian entrances into the campus would be enhanced with consistent landscape/hardscape character, wayfinding signs, and secondary walkways and paths to connect individual buildings, pedestrian nodes and other points of interest on the campus.

Recommendations:

Traffic calming treatments like speed humps and speed signage should be provided on Kingman Avenue and the north-south connection along the eastern portion of the campus to keep vehicular speeds low and improve pedestrian safety.

If the Kingman Avenue driveway onto Bascom Avenue is widened to include two outbound lanes as previously recommended, a sidewalk should also be installed along the northern side of Kingman Avenue to improve pedestrian safety and access along this entrance.

Bicycle Facilities

The project site is near existing bike facilities on Bascom Avenue, Leigh Avenue, and Parkmoor Avenue. The *San Jose Better Bike Plan 2025*, which the city is currently developing, is considering protected bike lanes on Bascom Avenue, Moorpark Avenue, and Leigh Avenue, which would provide direct access to the campus. The existing and proposed network of bicycle facilities provide good connectivity to the residential neighborhoods near the SJCC campus. The project would not remove any existing bicycle facilities, nor would it conflict with any adopted plans or policies for new bicycle facilities.

Recommendation:

There are currently no bicycle parking facilities within the campus. It is recommended that bicycle facilities like bicycle racks and bicycle lockers be installed to improve bicycle access to the campus.

Transit Service

Existing transit service to the campus is provided by VTA bus routes 25 and 61. The bus stops closest to the project site are located near Bascom Avenue and Renova Drive. There is no direct pedestrian connection between these bus stops and the campus. The campus does not have any frontage along Bascom Avenue except at the southeast corner of Bascom Avenue and Moorpark Avenue, and the students using these bus stops have to walk along Bascom Avenue until they reach this entrance or the Bascom Avenue and Kingman Avenue entrance to enter campus. Furthermore, Route 25 only has bus stops in the southbound direction on Bascom Avenue. Students have to cross Bascom Avenue, which is a 6-lane roadway, before they can access either the Moorpark or the Kingman Avenue entrances. Also, Per the *SJCC Facilities Master Plan*, a significant number of students utilize bus stops on Fruitdale Avenue a quarter mile south of the campus and access the campus through the residential neighborhood between the campus and Fruitdale Avenue. Bus stops on Fruitdale Avenue are serviced by VTA route 25. The *SJCC Facilities Master Plan* does not make any recommendations to improve pedestrian access to these bus stops.

Recommendation:

SJCC should coordinate with VTA to reroute Route 25 and add a bus stop within campus. A potential new route could be along the new Kingman Avenue east-west extension instead of Fruitdale Avenue. With a bus stop within campus, students would not cut through the residential neighborhoods to access campus. It would also improve overall pedestrian safety as students would not have to cross Bascom Avenue, which is a major roadway.

SJCC should also coordinate with VTA to add additional transit service to the campus to provide an alternative to driving to campus including a shuttle to and from the VTA LRT Green Line stop on Fruitdale Avenue. New bus routes and shuttles to the campus could be accommodated by creating a transit center on the campus.

Construction Activities

Typical activities related to the construction of any development could include lane narrowing and/or lane closures and sidewalk closures. In the event of any type of street closure, clear signage (e.g., closure and detour signs) must be provided to ensure vehicles, pedestrians and bicyclists are able to adequately reach their intended destinations safely. The project would be required to submit a construction management plan for City approval that addresses schedule, closures/detours, staging, parking, and truck routes.

Parking

The campus currently provides 1,846 parking spaces on the campus. As shown in Table 14, with the current enrollment of 8,706 students, the ratio of the number of students per parking space is 4.72. Per the *SJCC Facilities Master Plan*, surveys conducted showed that the parking is insufficient to meet demand.

Under project conditions, a 900-stall, 5 level parking deck would be added in the southwest quadrant of the campus (new Lot K). Changes to the existing parking structures would include 21 additional spaces in Lot B, 36 fewer spaces in Lot C, 16 additional spaces in Lot D, two fewer spaces in Lot E, 24 fewer spaces in Lot F, 12 additional spaces in Lot G, 31 additional spaces in Lot H, removal of Lot I, 187 fewer spaces in Lot J, and 16 additional spaces in Lot L. Overall, with the redistribution of parking, 685 new parking spaces would be added on campus for a total of 2,531 parking spaces.

With the future estimated enrollment of 10,735 students, the ratio of the number of students per parking space would be lowered to 4.24. This would help alleviate some of the parking issues on campus.

Table 14
Vehicle Parking Requirements

Scenario	Enrollment	Parking Spaces	Parking Ratio
Existing (2015)	8,706	1,846	4.72
Future (2030)	10,735	2,531	4.24
<u>Note:</u> Source: San Jose Evergreen Community College District Facilities Master Plan, January 2016			

Recommendation:

While adding parking on campus would address some of the parking demand issue on campus, increasing parking may encourage driving, which is counter-productive to the City's goal of decreasing VMT. To reduce parking demand on the campus, alternative modes of transportation like public transportation, carpooling, and bicycling should be strongly encouraged.

5. Conclusions

This study was conducted for the purpose of identifying the potential transportation impacts related to the proposed development. The project is subject to review by the Community College District. However, since the project is surrounded by the City of San Jose, the transportation impacts of the project were evaluated following the standards and methodologies established in the City of San Jose's Transportation Analysis Handbook. Based on the City of San Jose's Transportation Analysis Policy and Transportation Analysis Handbook, the TA report for the project includes a CEQA transportation analysis and a local transportation analysis (LTA).

CEQA Transportation Impacts

Project Vehicle Miles Traveled (VMT) Analysis

The impact on VMT by the SJCC increased enrollment was analyzed using the City of San Jose's TDF model. The daily VMT per student would decrease by 0.21, from 5.65 VMT under existing conditions to 5.44 VMT by 2030, therefore not causing a significant VMT impact.

CEQA Cumulative Impacts

The project is consistent with the General Plan goals and policies for the following reasons:

- The project site is located adjacent to bus stops on Bascom Avenue and Leigh Avenue.
- The project would slightly increase the employment density in the project area, and the proposed density would be consistent with the General Plan Land Use Designation.
- The project would provide improvements to pedestrian connectivity in the vicinity of the project site.

Therefore, based on the project description, the proposed project would be consistent with Envision San Jose 2040 General Plan. The project would be considered as part of the cumulative solution to meet the General Plan's long-range transportation goals and would result in a less-than-significant cumulative impact.

Local Transportation Effects

Project Trip Generation

Based on trip generation rates recommended by the Institute of Transportation Engineers (ITE), it is estimated that the proposed project would including 203 trips occurring during the AM peak hour and 203 trips occurring during the PM peak hour

Intersection Traffic Operations

The results of the intersection level of service analysis (see Table ES-1) show that the intersection of Bascom Avenue and Moorpark Avenue operates unacceptably at an LOS E under existing, background and background plus project conditions. The project would not cause any adverse effects at this intersection. All other intersections operate at an acceptable level of service under all study scenarios.

Driveway Operations

The results of the driveway level of service analysis show that the Kingman Avenue Driveway on Bascom Avenue operates unacceptably at an LOS F under project conditions. All other driveways operate at an acceptable level of service.

Other Transportation Issues

The proposed site plan shows adequate site access. The project would enhance pedestrian circulation by providing improved pedestrian access. Hexagon has the following recommendations resulting from the site access analysis.

- Signal coordination is recommended between Leland Avenue and Moorpark Avenue and Leland Avenue and Parkmoor Avenue to reduce the 95th percentile queue for the northbound left-turns at Leland Avenue and Parkmoor Avenue.
- The new driveway at Leigh Avenue and Kingman Avenue should be designed according to the City of San Jose Geometric Guidelines. When Kingman Avenue and Leigh Avenue is reconfigured under project conditions, a minimum storage length of 125 feet is recommended for the northbound left-turn movement to accommodate the 95th percentile queue during the peak hours.
- If feasible, Kingman Avenue should be widened to two outbound lanes. This would reduce the westbound queue and delay. A sidewalk should also be installed along the northern side of Kingman Avenue to improve pedestrian safety and access along this entrance.
- A median island should be installed along the full length of the right-turn lane into the campus on Moorpark Avenue to prevent vehicles from the off-ramp accessing this lane. Off-ramp vehicles would be forced to travel farther along Moorpark Avenue to Leigh Avenue to enter the campus. The driveway egress from parking Lot C onto Moorpark Avenue should be closed to prevent a conflict with the vehicles in the right turn lane.
- Traffic calming treatments like speed humps and speed signage should be provided on Kingman Avenue and the north-south connection along the eastern portion of the campus to keep vehicular speeds low and improve pedestrian safety.
- There are currently no bicycle parking facilities within the campus. It is recommended that bicycle facilities like bicycle racks and bicycle lockers be installed to improve bicycle access to the campus.
- SJCC should coordinate with VTA to reroute Route 25 and add a bus stop within campus. A potential new route could be along the new Kingman Avenue east-west extension instead of Fruitdale Avenue. With a bus stop within campus, students would not cut through the residential

neighborhoods to access campus. It would also improve overall pedestrian safety as students would not have to cross Bascom Avenue, which is a major roadway.

- SJCC should also coordinate with VTA to add additional transit service to the campus to provide an alternative to driving to campus including a shuttle to and from the VTA LRT Green Line stop on Fruitdale Avenue. New bus routes and shuttles to the campus could be accommodated by creating a transit center on the campus.
- Adding parking on campus would address some of the parking demand issue on campus, but would encourage driving, which is counter-productive to the City's goal of decreasing VMT. To reduce parking demand on the campus, alternative modes of transportation like public transportation, carpooling, and bicycling should be strongly encouraged.

Peak Hour Delay Signal Warrant Report

Intersection #9 (A) Bascom Avenue & Lot A Driveway

Future Volume Alternative: Peak Hour Warrant NOT Met

Approach:	North Bound					South Bound					East Bound					West Bound				
Movement:	L	-	T	-	R	L	-	T	-	R	L	-	T	-	R	L	-	T	-	R
Control:	Uncontrolled					Uncontrolled					Stop Sign					Stop Sign				
Lanes:	2	0	2	1	0	0	0	3	0	0	0	0	0	0	0	0	0	0	0	1
Initial Vol:	0 1956 3					0 963 0					0 0 0					0 0 0 2				
ApproachDel:	xxxxxx					xxxxxx					xxxxxx					13.7				

Approach[westbound][lanes=1][control=Stop Sign]

Signal Warrant Rule #1: [vehicle-hours=0.0]

FAIL - Vehicle-hours less than 4 for one lane approach.

Signal Warrant Rule #2: [approach volume=2]

FAIL - Approach volume less than 100 for one lane approach.

Signal Warrant Rule #3: [approach count=3][total volume=2924]

SUCCEED - Total volume greater than or equal to 650 for intersection with less than four approaches.

SIGNAL WARRANT DISCLAIMER

This peak hour signal warrant analysis should be considered solely as an "indicator" of the likelihood of an unsignalized intersection warranting a traffic signal in the future. Intersections that exceed this warrant are probably more likely to meet one or more of the other volume based signal warrant (such as the 4-hour or 8-hour warrants).

The peak hour warrant analysis in this report is not intended to replace a rigorous and complete traffic signal warrant analysis by the responsible jurisdiction. Consideration of the other signal warrants, which is beyond the scope of this software, may yield different results.

Peak Hour Volume Signal Warrant Report [Urban]

Approach[westbound][lanes=1][control=Stop Sign]

Signal Warrant Rule #1: [vehicle-hours=0.0]

FAIL - Vehicle-hours less than 4 for one lane approach.

Signal Warrant Rule #2: [approach volume=7]

FAIL - Approach volume less than 100 for one lane approach.

Signal Warrant Rule #3: [approach count=3][total volume=2580]

SUCCEED - Total volume greater than or equal to 650 for intersection with less than four approaches.

SIGNAL WARRANT DISCLAIMER

This peak hour signal warrant analysis should be considered solely as an "indicator" of the likelihood of an unsignalized intersection warranting a traffic signal in the future. Intersections that exceed this warrant are probably more likely to meet one or more of the other volume based signal warrant (such as the 4-hour or 8-hour warrants).

The peak hour warrant analysis in this report is not intended to replace a rigorous and complete traffic signal warrant analysis by the responsible jurisdiction. Consideration of the other signal warrants, which is beyond the scope of this software, may yield different results.

ApproachDel:	xxxxxx					xxxxxx					xxxxxx					19.8				

Approach[westbound][lanes=1][control=Stop Sign]

Signal Warrant Rule #1: [vehicle-hours=0.8]

FAIL - Vehicle-hours less than 4 for one lane approach.

Signal Warrant Rule #2: [approach volume=154]

SUCCEED - Approach volume greater than or equal to 100 for one lane approach.

Signal Warrant Rule #3: [approach count=3][total volume=2420]

SUCCEED - Total volume greater than or equal to 650 for intersection with less than four approaches.

SIGNAL WARRANT DISCLAIMER

This peak hour signal warrant analysis should be considered solely as an "indicator" of the likelihood of an unsignalized intersection warranting a traffic signal in the future. Intersections that exceed this warrant are probably more likely to meet one or more of the other volume based signal warrant (such as the 4-hour or 8-hour warrants).

The peak hour warrant analysis in this report is not intended to replace a rigorous and complete traffic signal warrant analysis by the responsible jurisdiction. Consideration of the other signal warrants, which is beyond the scope of this software, may yield different results.

ApproachDel:	11.5					xxxxxx					xxxxxx					xxxxxx				

Approach[northbound][lanes=1][control=Stop Sign]

Signal Warrant Rule #1: [vehicle-hours=0.0]

FAIL - Vehicle-hours less than 4 for one lane approach.

Signal Warrant Rule #2: [approach volume=5]

FAIL - Approach volume less than 100 for one lane approach.

Signal Warrant Rule #3: [approach count=2][total volume=1582]

SUCCEED - Total volume greater than or equal to 650 for intersection with less than four approaches.

SIGNAL WARRANT DISCLAIMER

This peak hour signal warrant analysis should be considered solely as an "indicator" of the likelihood of an unsignalized intersection warranting a traffic signal in the future. Intersections that exceed this warrant are probably more likely to meet one or more of the other volume based signal warrant (such as the 4-hour or 8-hour warrants).

The peak hour warrant analysis in this report is not intended to replace a rigorous and complete traffic signal warrant analysis by the responsible jurisdiction. Consideration of the other signal warrants, which is beyond the scope of this software, may yield different results.

Approach[northbound][lanes=1][control=Stop Sign]

Signal Warrant Rule #1: [vehicle-hours=0.0]

FAIL - Vehicle-hours less than 4 for one lane approach.

Signal Warrant Rule #2: [approach volume=1]

FAIL - Approach volume less than 100 for one lane approach.

Signal Warrant Rule #3: [approach count=2][total volume=1572]

SUCCEED - Total volume greater than or equal to 650 for intersection with less than four approaches.

SIGNAL WARRANT DISCLAIMER

This peak hour signal warrant analysis should be considered solely as an "indicator" of the likelihood of an unsignalized intersection warranting a traffic signal in the future. Intersections that exceed this warrant are probably more likely to meet one or more of the other volume based signal warrant (such as the 4-hour or 8-hour warrants).

The peak hour warrant analysis in this report is not intended to replace a rigorous and complete traffic signal warrant analysis by the responsible jurisdiction. Consideration of the other signal warrants, which is beyond the scope of this software, may yield different results.

SIGNAL WARRANT DISCLAIMER

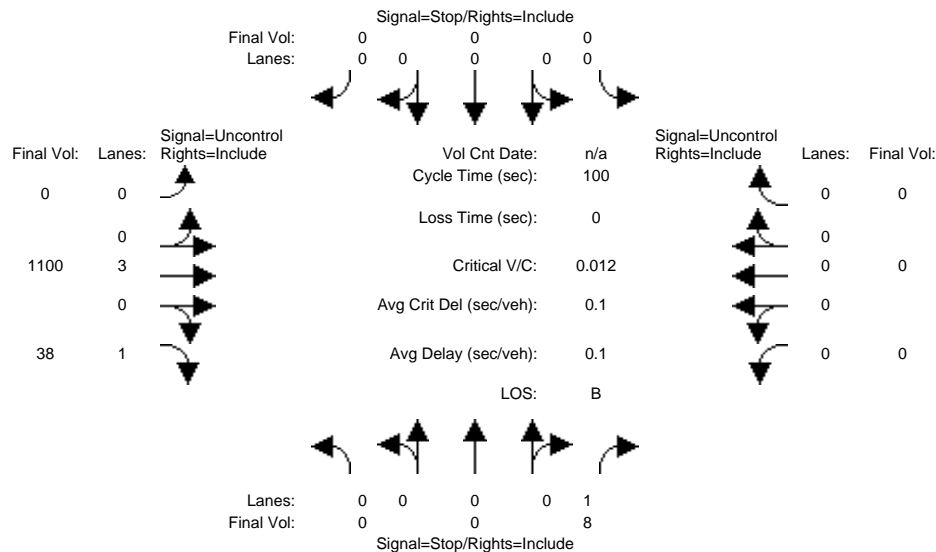

This peak hour signal warrant analysis should be considered solely as an "indicator" of the likelihood of an unsignalized intersection warranting a traffic signal in the future. Intersections that exceed this warrant are probably more likely to meet one or more of the other volume based signal warrant (such as the 4-hour or 8-hour warrants).

The peak hour warrant analysis in this report is not intended to replace a rigorous and complete traffic signal warrant analysis by the responsible jurisdiction. Consideration of the other signal warrants, which is beyond the scope of this software, may yield different results.

SIGNAL WARRANT DISCLAIMER

This peak hour signal warrant analysis should be considered solely as an "indicator" of the likelihood of an unsignalized intersection warranting a traffic signal in the future. Intersections that exceed this warrant are probably more likely to meet one or more of the other volume based signal warrant (such as the 4-hour or 8-hour warrants).

The peak hour warrant analysis in this report is not intended to replace a rigorous and complete traffic signal warrant analysis by the responsible jurisdiction. Consideration of the other signal warrants, which is beyond the scope of this software, may yield different results.

TECHNICAL MEMORANDUM

DATE: April 12, 2021

Project No.: 712-60-21-08

SENT VIA: EMAIL

TO: Paul Mitchell, Environmental Science Associates

FROM: Elizabeth Drayer, PE, RCE #46872

REVIEWED BY: Jim Connell, PE, RCE #63052

SUBJECT: Water Supply Evaluation for the San José City College Facility Management Plan for the San José Evergreen Community College District

INTRODUCTION

The San José City College (SJCC) is located in the central part of the City of San José and is known for its career and technical education program since its establishment in 1921 and opening of the campus in 1953. It provides a broad community college-level education with approximately 8,773 students in 2020. To serve and plan for on-going and future educational needs for a projected 10,735 students by 2030, the San José Evergreen Community College District (SJECCD or District) has prepared several plans, including educational and facilities plans. The recent San José City College Educational Master Plan (SJCC EMP) for the campus examined college-wide and discipline-specific projections out to 2030 for student instructional contact hours. The SJCC Vision 2030 Facilities Master Plan (SJCC FMP), developed on the basis of the projections of future growth from the SJCC EMP, provides a comprehensive plan for the campus's physical development. The SJCC FMP is an update to the prior SJCC FMP and provides an assessment of the current physical conditions of the facilities and options for future development scenarios.

The purpose of this Water Supply Evaluation is to provide an evaluation of the availability and reliability of water supplies to serve existing facilities and future planned development that is proposed under the SJCC FMP. This evaluation is based on existing SJCC water demands, recent water use trends, projected water demands for the future planned development under the SJCC FMP and the availability and reliability of water supplies from the San Jose Water Company (SJWC), the water supplier to the SJCC campus.

LEGAL REQUIREMENT FOR THE PREPARATION OF A WATER SUPPLY ASSESSMENT

California Senate Bill 610 (SB 610) amended state law, effective January 1, 2002, to improve the link between information on water supply availability and certain land use decisions made by cities and counties. SB 610 sought to promote more collaborative planning between local water suppliers and cities and counties. The statute requires detailed information regarding water availability to be provided to the city and county decision-makers prior to approval of specified large development projects. The purpose of this coordination is to ensure that prudent water supply planning has been conducted, and that planned

water supplies are adequate to meet existing demands, anticipated demands from approved projects and tentative maps, and the demands of proposed projects.

SB 610 amended California Water Code sections 10910 through 10915 (inclusive) to require land use lead agencies to identify any public water purveyor that may supply water for a proposed development project and request a Water Supply Assessment from the identified water purveyor. The purpose of a Water Supply Assessment is to demonstrate the sufficiency of the purveyor's water supplies to satisfy the water demands of the proposed development, while still meeting the water purveyor's existing and planned future uses. Water Code sections 10910 through 10915 delineate the specific information that must be included in the Water Supply Assessment.

Although the SB 610 requirements do not specifically apply to the District, because it is not a city or a county, the District has voluntarily elected to prepare a Water Supply Assessment-like document, a Water Supply Evaluation, to determine and demonstrate the sufficiency of the water supplies from the San José Water Company to satisfy the water demand of the planned development at SJCC campus site under the proposed FMP.

SAN JOSE WATER COMPANY URBAN WATER MANAGEMENT PLAN

In 2016, the SJWC prepared its 2015 Urban Water Management Plan (UWMP) for its service area which includes the SJCC campus, as well as most of the City of San José and Cupertino, the entire cities of Campbell, Monte Sereno, and Saratoga, the Town of Los Gatos, and parts of unincorporated Santa Clara County. The 2015 UWMP evaluated the projected water demands, including demands for SJCC, and available water supplies for the SJWC service area.

The 2015 UWMP includes projected water supplies required to meet existing and future demands through the year 2040. The 2015 UWMP serves two primary purposes: (1) it serves as a plan to inform water supply resource management, and (2) it serves as a reporting document for compliance with California Water Code and the California Urban Water Management Planning Act of 1983. The 2015 UWMP includes water demand projections for the SJWC service area through the year 2040 based on population and use projections. The UWMP also takes into account anticipated demand decreases due to current conservation efforts in the service area. Additionally, future retail water supply projects including recycled water projects are considered in the UWMP.

SJWC is currently updating its UWMP, and the SJWC 2020 UWMP is anticipated to be completed and adopted in June 2021.

PROJECT DESCRIPTION

The proposed development and campus water efficiency design standards are discussed below.

SJCC FMP Proposed Development

The SJCC campus is located at 2100 Moorpark Avenue in central San José in Santa Clara County, approximately 3 miles west of Downtown San José. The SJCC campus currently encompasses approximately 58 acres. The SJCC campus is located in an urban setting and is currently developed with several buildings, both educational and administrative, to house several programs, a library, sports facilities, parking and access ways, and other ancillary facilities.

The existing SJCC campus was established in 1953 with initial buildings built in the 1950s. The buildings are primarily concentrated in the northern portion of the campus along Moorpark Avenue, with Cesar Chavez Library providing visual presence. Other existing buildings are aligned in the central and western portions of the campus site. Existing sports facilities are located mainly in the central and eastern central portions of the campus, and include the softball field, football/track field, practice field, soccer field, tennis courts, and pool.

Through implementation of its FMP, SJCC aims to achieve the goals and objectives discussed in the FMP and the SJCC EMP, including an update and expansion of SJCC facilities to accommodate projected expansion in demand for community college education and programs resulting from the population growth within the District's service area for year 2030. Gross square footages of proposed facility improvements contained in the SJCC FMP to meet the future program needs are summarized in Table 1 and include demolition and removal of certain existing buildings on the campus; the construction of certain new buildings and the renovation of certain existing buildings and facilities; improvements to vehicular and pedestrian access and circulation systems; expansion of parking facilities and capacity; and open space improvements.

Table 1. Summary of SJCC FMP Proposed Development^(a)			
Proposed Development	Existing Building Gross Square Feet	Proposed Building Gross Square Feet	Net Change Gross Square Feet
New Construction / Buildings	45,403	466,494 ^(b)	421,091
Interior Renovations / Reuse of Existing Buildings	257,075	264,575	7500
Demolition	108,761	--	-108,761
No Changes	223,454	223,454	--
Totals	634,693	954,523	319,830
(a) Source: SJECCD, 2020			
(b) Includes a proposed 180,000 gsf parking structure which would not have an associated water demand.			

As shown in Table 1, the FMP proposes to increase the overall square footage of campus buildings from 634,693 gross square feet (gsf) to 954,523 gsf. This increase includes various types of facilities, some of which will not have associated water demands (e.g., as part of the new construction, a new 180,000 gsf parking structure is proposed). Therefore, the net increase in building gross square footage for buildings that would have an associated water demand (e.g., not including the new parking structure) is 139,830 gsf (319,830 gsf – 180,000 gsf), which is a 22 percent increase over the existing building gross square footage.

Table 2 shows the existing and projected number of students and staff under the SJCC FMP.

Table 2. Existing and Projected SJCC Students and Staff			
Year	Estimated Student Enrollment ^(a)	Estimated Staff	Total Estimated Service Population
Existing			
2018	8,639	665	9,304
2019 ^(b)	8,806	670	9,376
Projected			
2030	10,735	826	11,561
(a) Student Enrollment is an estimate of full-time equivalent (FTE). (b) 2019 is used as the baseline year due to the impacts of the pandemic in 2020. (c) Estimated service population includes full-time equivalent student enrollment and staff.			

Campus Design Standards Related to Water Efficiency and Conservation

The SJECCD District Standards + Campus Guidelines Handbook provides guidelines and standards for new development and is intended to be considered in conjunction with applicable building codes and regulations. Part B - Sustainable Design Guidelines includes guidance on, among other topics, water efficiency and conservation. Three considerations in Part B relevant to this Water Supply Evaluation include:

- Achieve water efficiency and conservation through efficient use of water indoors, outdoors, and in wastewater conveyance.
- Employ a variety of water-wise strategies to conserve and safeguard limited water resources.
- Implement landscape management best practices, such as drought-tolerant native plants, to aid in water conservation and protection of local watersheds.

Part C - Hardscape Elements, Part H - Landscape Elements, and Part K - Irrigation Standards includes guidance on, among other topics, stormwater management and water conservation, including:

- Opportunities for sustainable stormwater management include the use of permeable paving and bioswales where appropriate.
- Site drainage shall be directed into planted bio-swales where appropriate to minimize run-off to storm drains and meet CalGreen stormwater guidelines.
- Permeable pavers are an excellent solution for allowing site water to infiltrate without the use of storm basins.
- Quads and plazas can be planted with water conserving grass and large trees for shade.
- Individual irrigation systems around the campus shall be designed to water the entire landscaped area within that area in one evening between the hours of 10 pm and 8 am.
- Irrigation systems and plans shall be designed to meet the requirement of the State of California Assembly Bill AB 1881 and the Model Water Efficient Landscape Ordinance (MWELO) of the City of San José.

These and other guidelines and standards will help ensure that proposed development under the SJCC FMP will be water efficient and promote water conservation.

SJCC EXISTING AND PROJECTED WATER DEMANDS

Existing and projected campus water demands are discussed below.

Existing Campus Water Consumption

Existing SJCC campus water consumption for 2018 and 2019 was evaluated to understand existing campus water use and trends. Water consumption for the campus in 2020 was not evaluated as much of the campus was shut down for much of the year due to the pandemic, and thus 2020 campus water use would not be representative of typical campus operations. A summary of campus water use in 2018 and 2019 is provided in Table 3. As shown, water use on the SJCC campus in 2018 and 2019 was very similar in both years with total water use of about 20 million gallons per year, or about 55,000 gallons per day. That water use equates to just under 6 gallons per day per person, based on the estimated student enrollment and campus staff for each year, or about 0.09 gallons per day per the existing gross square footage of campus buildings. These water use trends were used to project future water demands for the SJCC campus under the FMP as described below.

Table 3. SJCC 2018 and 2019 Water Consumption			
	2018	2019	Units
Total Annual Water Use ^(a)	20,070,336	20,422,644	Gallons per Year
Average Daily Water Use	54,987	55,952	Gallons per Day
Estimated Service Population ^(b)	9,304	9,376	Students and Staff
Average Daily Water Use per Person	5.91	5.97	Gallons per Day / Person
Building Gross Square Footage ^(c)	634,693	634,693	Gross Square Feet
Average Daily Water Use per Gross Square Feet	0.087	0.088	Gallons per Day / Gross Square Feet
<p>(a) Based on San José Water Company water bills for SJCC water use accounts in 2018 and 2019.</p> <p>(b) Estimated service population includes full-time equivalent student enrollment and staff (see Table 2).</p> <p>(c) Existing building gross square footage (see Table 1).</p>			

Projected Future Campus Water Consumption

Future campus water use has been projected based on the proposed development under the SJCC FMP and the 2019 water use trends on the SJCC campus. Table 4 presents the projected 2030 water use estimated in two ways: (1) based on the proposed building gross square footage under the FMP and the 2019 average daily water use per gross square feet, and (2) based on the proposed 2030 service population under the FMP and the 2019 average daily water use per person. As shown, using the two projection methods yields very similar projections for the 2030 daily and annual water use, with the method based on the proposed 2030 service population resulting in a slightly higher water use projection (25.2 million gallons per year) than the method based on the proposed building gross square footage (24.9 million gallons per year).

Based on this evaluation, the projection developed based on the proposed 2030 service population (25.2 million gallons per year) will be used in this Water Supply Evaluation as it is slightly higher, and thus more conservative, than the projection developed based on the proposed future gross square footage of buildings. Using existing campus water use trends to project future campus water use is a conservative assumption for future campus water demands as water use in future campus buildings will likely be even more efficient than water use in existing campus buildings due the campus design guidelines and standards for water efficiency and conservation (described above).

The projected future campus water use under the SJCC FMP of 25.2 million gallons per year is about 24 percent higher than the 2019 campus water use.

Table 4. SJCC Projected 2030 Water Consumption		
	2030	Units
Projected Water Use Based on Future Gross Square Footage of Buildings		
Proposed Building Gross Square Footage (see Table 1)	954,523	Gross Square Feet
Proposed Building Gross Square Footage (not including proposed 180,000 gsf Parking Structure)	774,523	Gross Square Feet
2019 Average Daily Water Use per Gross Square Feet (see Table 3)	0.088	Gallons per Day / Gross Square Feet
Estimated 2030 Daily Water Use	68,200	Gallons per Day
Estimated 2030 Annual Water Use	24,900,000	Gallons per Year
Projected Water Use Based on Future Estimated Service Population		
Estimated 2030 Service Population (see Table 2)	11,561	Includes projected student enrollment of 10,735 and 826 staff
2019 Average Daily Water Use per Person (see Table 3)	5.97	Gallons per Day / Person
Estimated 2030 Daily Water Use	69,000	Gallons per Day
Estimated 2030 Annual Water Use	25,200,000	Gallons per Year

SAN JOSE WATER COMPANY PROJECTED WATER DEMANDS AND WATER SUPPLIES

The SJWC projected water demands and supplies from its 2015 UWMP are discussed below.

SJWC Water Demands

SJWC's 2015 UWMP presents demand projections for 2020 to 2040 for SJWC's water service area, which includes the SJCC campus. Demand projections are provided by use type (e.g., single family, multi-family, commercial, industrial, institutional, etc.) and are summarized below in Table 5. SJWC's 2015 UWMP does not specifically identify demand projections for specific customers, such as SJCC. However, it is assumed that projected water demands for the SJCC campus are included in SJWC's demand projections and are classified by SJWC as institutional/governmental. Per SJWC's demand projections, institutional/governmental water use makes up less than 5 percent of SJWC's overall projected water demands through 2040.

Based on the SJWC projections for institutional/governmental water use, the existing (2019) SJCC water use of about 20.4 million gallons per year is less than 1 percent of SJWC's projected 2020 institutional water demand (and less than 0.04 percent of SJWC's projected 2020 overall demand). The projected 2030 SJCC water use of 25.2 million gallons per year is about 1 percent of SJWC's projected 2030 institutional water demand (and less than 0.05 percent of SJWC's projected overall demand).

Table 5. San Jose Water Company Water Demand Projections, million gallons^(a)					
Use Type	2020	2025	2030	2035	2040
Single Family	20,673	21,355	22,077	22,860	23,682
Multi-Family	3,648	3,769	3,896	4,034	4,179
Commercial	15,761	16,281	16,831	17,428	18,055
Industrial	303	313	323	335	347
Institutional/Governmental	2,156	2,227	2,302	2,384	2,470
Sales/Transfers/Exchanges to other agencies (resale of drinking water)	177	182	189	195	202
Other (portable meters)	65	67	69	72	75
Sales/Transfers/Exchanges to other agencies (resale of raw water)	56	58	60	62	64
Losses	2,978	3,076	3,180	3,293	3,412
Total Potable Water Demand	45,817	47,328	48,927	50,663	52,486
Total Recycled Water Demand^(b)	1,327	2,233	2,721	2,727	2,727
Total Water Demand	47,144	49,561	51,648	53,390	55,213
(a) From SJWC 2015 UWMP, Table 4-2.					
(b) From SJWC 2015 UWMP, Table 4-3.					

SJWC Water Supplies

SJWC has three sources of potable water supply: groundwater, imported treated surface water and local surface water. On average, groundwater from the major water-bearing aquifers of the Santa Clara Subbasin comprises about 33 percent of SJWC's potable water supply. These aquifers are recharged naturally by rainfall and streams and artificially mainly by recharge ponds operated by Valley Water (formerly known as the Santa Clara Valley Water District, SCVWD). SJWC is under contract with Valley Water for the purchase of treated surface water which makes up about 50 percent of SJWC's potable water supply. This water originates from several sources including local reservoirs, the State Water Project and the federally-funded Central Valley Project San Felipe Division. Water enters SJWC's system at various turnouts after it is treated at one of Valley Water's three water treatment plants. SJWC's final source of potable supply is from surface water in the local watersheds of the Santa Cruz Mountains. Surface water typically provides about 7 percent of total water supply depending on the amount of annual rainfall. A series of dams and automated intakes collect water released from SJWC's lakes. The water is then sent to SJWC's Montevina Filter Plant for treatment prior to entering the distribution system. SJWC's Saratoga Treatment Plant draws water from a local stream which collects water from the nearby Santa Cruz Mountains.

In addition to potable water supplies, SJWC is a retailer of recycled water supplies. In 1997, SJWC entered into a Wholesaler-Retailer Agreement with the City of San José to provide recycled water to SJWC's existing and new customers located near South Bay Water Recycling recycled water distribution facilities;

wherein the City of San José is the wholesaler and SJWC is the retailer. It should be noted that recycled water, though available in other parts of San José, is not currently delivered to the SJCC campus.

SJWC Water Supply Reliability

SJWC's 2015 UWMP evaluated the reliability of its water supplies and the ability to meet projected water demands through 2040 under average year conditions, single dry year conditions and multiple dry year conditions. SJWC's water sources are constrained in one or more ways, driven by hydrologic conditions, water quality, and legal restrictions.

As shown in Table 6, SJWC projected adequate supplies for years 2020 to 2040 to meet system demand under average year conditions.

Table 6. San Jose Water Company Projected Supply vs. Demand in Average Years, million gallons^(a)					
	2020	2025	2030	2035	2040
Supply Totals	47,144	49,561	51,648	53,390	55,213
Demand Totals	47,144	49,561	51,648	53,390	55,213
Difference	0	0	0	0	0
(a) From SJWC 2015 UWMP, Table 7-2. Includes both potable and recycled water supply and demand.					

As shown in Table 7, SJWC projected adequate supplies for years 2020 to 2035 to meet system demand under single dry year conditions. A supply shortage of about 6 percent was projected in 2040.

Table 7. San Jose Water Company Projected Supply vs. Demand in Single Dry Years, million gallons^(a)					
	2020	2025	2030	2035	2040
Supply Totals	45,817	47,328	48,927	50,663	49,368
Demand Totals	45,817	47,328	48,927	50,663	52,486
Difference	0	0	0	0	(3,118)
(a) From SJWC 2015 UWMP, Table 7-3. Includes potable water supply and demand only.					

As shown in Table 8, SJWC projected adequate supplies for 2020 to 2040 to meet system demands under the first year of a multiple year drought, but projected shortages during the second and third years of a multiple year drought from 2020 to 2040. The projected supply shortages reach almost 41 percent in the third year of a drought in 2040.

Table 8. San Jose Water Company Projected Supply vs. Demand in Multiple Dry Years, million gallons^(a)

		2020	2025	2030	2035	2040
First Year	Supply Totals	45,817	47,328	48,927	50,663	52,486
	Demand Totals	45,817	47,328	48,927	50,663	52,486
	Difference	0	0	0	0	0
Second Year	Supply Totals	40,909	47,134	45,293	43,316	42,890
	Demand Totals	45,817	47,328	48,927	50,663	52,486
	Difference	(4,908)	(194)	(3,634)	(7,347)	(9,596)
Third Year	Supply Totals	31,843	40,120	36,857	32,901	31,049
	Demand Totals	45,817	47,328	48,927	50,663	52,486
	Difference	(13,974)	(7,208)	(12,070)	(17,762)	(21,437)
(a) From SJWC 2015 UWMP, Table 7-4. Includes potable water supply and demand only.						

SJWC's 2015 UWMP stated that Valley Water's then current (2015) water supply reserves were insufficient to meet SJWC needs throughout an extended drought, and that there were increasing concerns about the reliability of imported treated surface water during average years, driven by risks associated with climate change, reductions in imported water supplies, revenue requirements, and threats to infrastructure.

In January 2019, the Valley Water Board of Directors approved an updated long-term water supply reliability level-of-service goal. The goal is to develop supplies to meet at least 100 percent of annual water demand identified in the Valley Water's Master Plan during non-drought years and at least 80 percent of annual water demand in drought years.

In November 2019, Valley Water completed its Water Supply Master Plan 2040 (WSMP 2040) which provides a strategy for meeting future water demands consistent with Valley Water's updated level-of-service goal. Valley Water's Ensure Sustainability water supply strategy relies on the following three elements to provide a reliable supply of water to meet needs through 2040: (1) secure existing supplies and infrastructure; (2) increase water conservation and water reuse; and (3) optimize the use of existing supplies and infrastructure. With the phased implementation of planned future projects, Valley Water's available supplies are projected to increase over time. Planned future projects include Transfer Bethany Pipeline (2025); Anderson Dam Seismic Retrofit and Potable Reuse (2030); Guadalupe, Calero, and Almaden Dam Seismic Retrofits and Pacheco Reservoir Expansion (2035); and an additional 35,000 acre-feet per year of water conservation.

With Valley Water's Ensure Sustainability water supply strategy in place, for a six-year drought similar to the 1987 to 1992 drought at a 2040 demand level, the supplies would be sufficient to meet 100 percent of demand during the first five years of drought and more than 90 percent in the last year. Implementation of the Ensure Sustainability water supply strategy would also reduce the frequency and magnitude of short-term water use reductions under 2040 demands. With full implementation of all elements of the water supply strategy, short-term water use reductions would occur only 3 percent of the time, and the maximum call for water use reductions would be 20 percent.

Both SJWC and Valley Water are currently preparing their 2020 UWMPs which are due to the California Department of Water Resources by July 1, 2021. These 2020 UWMPs were not available for consideration in this Water Supply Evaluation. However, based on Valley Water's updated long-term water supply reliability level-of-service goal and the recommendations in its WSMP 2040, it is anticipated that SJWC's 2020 UWMP will show improved water supply reliability as compared to the 2015 UWMP.

SJWC's 2015 UWMP includes a Water Shortage Contingency Plan which outlines water shortage stages and actions to be taken under each stage to reduce water demands in the event of a supply shortage. It is assumed that SJWC will update its Water Shortage Contingency Plan in conjunction with its 2020 UWMP. As a customer of SJWC, SJCC will be subject to the water demand reduction actions enacted by SJWC in the event of a water shortage.

WATER SUPPLY EVALUATION FINDINGS AND CONCLUSIONS

Findings and conclusions of this Water Supply Evaluation for the SJCC FMP are as follows:

- Water demands for the SJCC campus are projected to increase from about 20.4 million gallons per year (2019) to about 25.2 million gallons by 2030 under the SJCC FMP.
- The existing (2019) SJCC water use of about 20.4 million gallons per year is less than 1 percent of SJWC's projected 2020 institutional water demand and less than 0.04 percent of SJWC's projected 2020 overall demand. The projected 2030 SJCC water use of 25.2 million gallons per year is about 1 percent of SJWC's projected 2030 institutional water demand and less than 0.05 percent of SJWC's projected overall demand.
- SJWC's 2015 UWMP indicated that SJWC had adequate supplies to meet projected demands in its service area for average years through 2040, single dry years through 2035, and the first year of a multiple year drought through 2040. However, supply shortages were projected for a single dry year in 2040 and the second and third years of a multiple year drought from 2020 to 2040.
- As SJWC receives most of its supplies from Valley Water imported surface water supplies, SJWC's supply reliability is highly dependent on the reliability of Valley Water's supplies.
- In January 2019, the Valley Water Board of Directors approved an updated long-term water supply reliability level-of-service goal. The goal is to develop supplies to meet at least 100 percent of annual water demand identified in the Valley Water's Master Plan during non-drought years and at least 80 percent of annual water demand in drought years.
- In November 2019, Valley Water completed its Water Supply Master Plan 2040 (WSMP 2040) which provides a strategy for meeting future water demands consistent with Valley Water's updated level-of-service goal.
- Although SJWC's 2020 UWMP and Valley Water's 2020 UWMP were not available for consideration for this Water Supply Evaluation, it is anticipated that SJWC's 2020 UWMP will show improved water supply reliability as compared to the 2015 UWMP based on Valley Water's updated level-of-service goal and strategy for meeting future water demands. As such, it is anticipated that SJWC will have adequate water supplies to meet the projected demands for the SJCC FMP.
- As noted above, water shortages may still occur, but are not anticipated to be as severe as shown in the SJWC 2015 UWMP. In the event of a water shortage, SJCC will be subject to the water demand reduction actions enacted by SJWC as part of its Water Shortage Contingency Plan.

Comments on the Initial Study/ Notice of Preparation (NOP)

NATIVE AMERICAN HERITAGE COMMISSION

October 29, 2020

Terrence Degray
San Jose Evergreen Community College District
40 S. Market Street
San Jose, CA 95113

Re: 2020100536, San Jose City College Facilities Master Plan Project, Santa Clara County

Dear Mr. Degray:

The Native American Heritage Commission (NAHC) has received the Notice of Preparation (NOP), Draft Environmental Impact Report (DEIR) or Early Consultation for the project referenced above. The California Environmental Quality Act (CEQA) (Pub. Resources Code §21000 et seq.), specifically Public Resources Code §21084.1, states that a project that may cause a substantial adverse change in the significance of a historical resource, is a project that may have a significant effect on the environment. (Pub. Resources Code § 21084.1; Cal. Code Regs., tit.14, §15064.5 (b) (CEQA Guidelines §15064.5 (b)). If there is substantial evidence, in light of the whole record before a lead agency, that a project may have a significant effect on the environment, an Environmental Impact Report (EIR) shall be prepared. (Pub. Resources Code §21080 (d); Cal. Code Regs., tit. 14, § 5064 subd.(a)(1) (CEQA Guidelines §15064 (a)(1)). In order to determine whether a project will cause a substantial adverse change in the significance of a historical resource, a lead agency will need to determine whether there are historical resources within the area of potential effect (APE).

CEQA was amended significantly in 2014. Assembly Bill 52 (Gatto, Chapter 532, Statutes of 2014) (AB 52) amended CEQA to create a separate category of cultural resources, "tribal cultural resources" (Pub. Resources Code §21074) and provides that a project with an effect that may cause a substantial adverse change in the significance of a tribal cultural resource is a project that may have a significant effect on the environment. (Pub. Resources Code §21084.2). Public agencies shall, when feasible, avoid damaging effects to any tribal cultural resource. (Pub. Resources Code §21084.3 (a)). **AB 52 applies to any project for which a notice of preparation, a notice of negative declaration, or a mitigated negative declaration is filed on or after July 1, 2015.** If your project involves the adoption of or amendment to a general plan or a specific plan, or the designation or proposed designation of open space, on or after March 1, 2005, it may also be subject to Senate Bill 18 (Burton, Chapter 905, Statutes of 2004) (SB 18). **Both SB 18 and AB 52 have tribal consultation requirements.** If your project is also subject to the federal National Environmental Policy Act (42 U.S.C. § 4321 et seq.) (NEPA), the tribal consultation requirements of Section 106 of the National Historic Preservation Act of 1966 (154 U.S.C. 300101, 36 C.F.R. §800 et seq.) may also apply.

The NAHC recommends consultation with California Native American tribes that are traditionally and culturally affiliated with the geographic area of your proposed project as early as possible in order to avoid inadvertent discoveries of Native American human remains and best protect tribal cultural resources. Below is a brief summary of portions of AB 52 and SB 18 as well as the NAHC's recommendations for conducting cultural resources assessments.

Consult your legal counsel about compliance with AB 52 and SB 18 as well as compliance with any other applicable laws.

AB 52 has added to CEQA the additional requirements listed below, along with many other requirements:

- 1. Fourteen Day Period to Provide Notice of Completion of an Application/Decision to Undertake a Project:** Within fourteen (14) days of determining that an application for a project is complete or of a decision by a public agency to undertake a project, a lead agency shall provide formal notification to a designated contact of, or tribal representative of, traditionally and culturally affiliated California Native American tribes that have requested notice, to be accomplished by at least one written notice that includes:
 - a. A brief description of the project.
 - b. The lead agency contact information.
 - c. Notification that the California Native American tribe has 30 days to request consultation. (Pub. Resources Code §21080.3.1 (d)).
 - d. A "California Native American tribe" is defined as a Native American tribe located in California that is on the contact list maintained by the NAHC for the purposes of Chapter 905 of Statutes of 2004 (SB 18). (Pub. Resources Code §21073).
- 2. Begin Consultation Within 30 Days of Receiving a Tribe's Request for Consultation and Before Releasing a Negative Declaration, Mitigated Negative Declaration, or Environmental Impact Report:** A lead agency shall begin the consultation process within 30 days of receiving a request for consultation from a California Native American tribe that is traditionally and culturally affiliated with the geographic area of the proposed project. (Pub. Resources Code §21080.3.1, subds. (d) and (e)) and prior to the release of a negative declaration, mitigated negative declaration or Environmental Impact Report. (Pub. Resources Code §21080.3.1(b)).
 - a. For purposes of AB 52, "consultation shall have the same meaning as provided in Gov. Code §65352.4 (SB 18). (Pub. Resources Code §21080.3.1 (b)).
- 3. Mandatory Topics of Consultation If Requested by a Tribe:** The following topics of consultation, if a tribe requests to discuss them, are mandatory topics of consultation:
 - a. Alternatives to the project.
 - b. Recommended mitigation measures.
 - c. Significant effects. (Pub. Resources Code §21080.3.2 (a)).
- 4. Discretionary Topics of Consultation:** The following topics are discretionary topics of consultation:
 - a. Type of environmental review necessary.
 - b. Significance of the tribal cultural resources.
 - c. Significance of the project's impacts on tribal cultural resources.
 - d. If necessary, project alternatives or appropriate measures for preservation or mitigation that the tribe may recommend to the lead agency. (Pub. Resources Code §21080.3.2 (a)).
- 5. Confidentiality of Information Submitted by a Tribe During the Environmental Review Process:** With some exceptions, any information, including but not limited to, the location, description, and use of tribal cultural resources submitted by a California Native American tribe during the environmental review process shall not be included in the environmental document or otherwise disclosed by the lead agency or any other public agency to the public, consistent with Government Code §6254 (r) and §6254.10. Any information submitted by a California Native American tribe during the consultation or environmental review process shall be published in a confidential appendix to the environmental document unless the tribe that provided the information consents, in writing, to the disclosure of some or all of the information to the public. (Pub. Resources Code §21082.3 (c)(1)).
- 6. Discussion of Impacts to Tribal Cultural Resources in the Environmental Document:** If a project may have a significant impact on a tribal cultural resource, the lead agency's environmental document shall discuss both of the following:
 - a. Whether the proposed project has a significant impact on an identified tribal cultural resource.
 - b. Whether feasible alternatives or mitigation measures, including those measures that may be agreed to pursuant to Public Resources Code §21082.3, subdivision (a), avoid or substantially lessen the impact on the identified tribal cultural resource. (Pub. Resources Code §21082.3 (b)).

7. Conclusion of Consultation: Consultation with a tribe shall be considered concluded when either of the following occurs:

- a. The parties agree to measures to mitigate or avoid a significant effect, if a significant effect exists, on a tribal cultural resource; or
- b. A party, acting in good faith and after reasonable effort, concludes that mutual agreement cannot be reached. (Pub. Resources Code §21080.3.2 (b)).

8. Recommending Mitigation Measures Agreed Upon in Consultation in the Environmental Document: Any mitigation measures agreed upon in the consultation conducted pursuant to Public Resources Code §21080.3.2 shall be recommended for inclusion in the environmental document and in an adopted mitigation monitoring and reporting program, if determined to avoid or lessen the impact pursuant to Public Resources Code §21082.3, subdivision (b), paragraph 2, and shall be fully enforceable. (Pub. Resources Code §21082.3 (a)).

9. Required Consideration of Feasible Mitigation: If mitigation measures recommended by the staff of the lead agency as a result of the consultation process are not included in the environmental document or if there are no agreed upon mitigation measures at the conclusion of consultation, or if consultation does not occur, and if substantial evidence demonstrates that a project will cause a significant effect to a tribal cultural resource, the lead agency shall consider feasible mitigation pursuant to Public Resources Code §21084.3 (b). (Pub. Resources Code §21082.3 (e)).

10. Examples of Mitigation Measures That, If Feasible, May Be Considered to Avoid or Minimize Significant Adverse Impacts to Tribal Cultural Resources:

- a. Avoidance and preservation of the resources in place, including, but not limited to:
 - i. Planning and construction to avoid the resources and protect the cultural and natural context.
 - ii. Planning greenspace, parks, or other open space, to incorporate the resources with culturally appropriate protection and management criteria.
- b. Treating the resource with culturally appropriate dignity, taking into account the tribal cultural values and meaning of the resource, including, but not limited to, the following:
 - i. Protecting the cultural character and integrity of the resource.
 - ii. Protecting the traditional use of the resource.
 - iii. Protecting the confidentiality of the resource.
- c. Permanent conservation easements or other interests in real property, with culturally appropriate management criteria for the purposes of preserving or utilizing the resources or places.
- d. Protecting the resource. (Pub. Resource Code §21084.3 (b)).
- e. Please note that a federally recognized California Native American tribe or a non-federally recognized California Native American tribe that is on the contact list maintained by the NAHC to protect a California prehistoric, archaeological, cultural, spiritual, or ceremonial place may acquire and hold conservation easements if the conservation easement is voluntarily conveyed. (Civ. Code §815.3 (c)).
- f. Please note that it is the policy of the state that Native American remains and associated grave artifacts shall be repatriated. (Pub. Resources Code §5097.991).

11. Prerequisites for Certifying an Environmental Impact Report or Adopting a Mitigated Negative Declaration or Negative Declaration with a Significant Impact on an Identified Tribal Cultural Resource: An Environmental Impact Report may not be certified, nor may a mitigated negative declaration or a negative declaration be adopted unless one of the following occurs:

- a. The consultation process between the tribes and the lead agency has occurred as provided in Public Resources Code §21080.3.1 and §21080.3.2 and concluded pursuant to Public Resources Code §21080.3.2.
- b. The tribe that requested consultation failed to provide comments to the lead agency or otherwise failed to engage in the consultation process.
- c. The lead agency provided notice of the project to the tribe in compliance with Public Resources Code §21080.3.1 (d) and the tribe failed to request consultation within 30 days. (Pub. Resources Code §21082.3 (d)).

The NAHC's PowerPoint presentation titled, "Tribal Consultation Under AB 52: Requirements and Best Practices" may be found online at: http://nahc.ca.gov/wp-content/uploads/2015/10/AB52TribalConsultation_CalEPAPDF.pdf

SB 18

SB 18 applies to local governments and requires local governments to contact, provide notice to, refer plans to, and consult with tribes prior to the adoption or amendment of a general plan or a specific plan, or the designation of open space. (Gov. Code §65352.3). Local governments should consult the Governor's Office of Planning and Research's "Tribal Consultation Guidelines," which can be found online at: https://www.opr.ca.gov/docs/09_14_05_Updated_Guidelines_922.pdf.

Some of SB 18's provisions include:

1. **Tribal Consultation:** If a local government considers a proposal to adopt or amend a general plan or a specific plan, or to designate open space it is required to contact the appropriate tribes identified by the NAHC by requesting a "Tribal Consultation List." If a tribe, once contacted, requests consultation the local government must consult with the tribe on the plan proposal. **A tribe has 90 days from the date of receipt of notification to request consultation unless a shorter timeframe has been agreed to by the tribe.** (Gov. Code §65352.3 (a)(2)).
2. **No Statutory Time Limit on SB 18 Tribal Consultation.** There is no statutory time limit on SB 18 tribal consultation.
3. **Confidentiality:** Consistent with the guidelines developed and adopted by the Office of Planning and Research pursuant to Gov. Code §65040.2, the city or county shall protect the confidentiality of the information concerning the specific identity, location, character, and use of places, features and objects described in Public Resources Code §5097.9 and §5097.993 that are within the city's or county's jurisdiction. (Gov. Code §65352.3 (b)).
4. **Conclusion of SB 18 Tribal Consultation:** Consultation should be concluded at the point in which:
 - a. The parties to the consultation come to a mutual agreement concerning the appropriate measures for preservation or mitigation; or
 - b. Either the local government or the tribe, acting in good faith and after reasonable effort, concludes that mutual agreement cannot be reached concerning the appropriate measures of preservation or mitigation. (Tribal Consultation Guidelines, Governor's Office of Planning and Research (2005) at p. 18).

Agencies should be aware that neither AB 52 nor SB 18 precludes agencies from initiating tribal consultation with tribes that are traditionally and culturally affiliated with their jurisdictions before the timeframes provided in AB 52 and SB 18. For that reason, we urge you to continue to request Native American Tribal Contact Lists and "Sacred Lands File" searches from the NAHC. The request forms can be found online at: <http://nahc.ca.gov/resources/forms/>.

NAHC Recommendations for Cultural Resources Assessments

To adequately assess the existence and significance of tribal cultural resources and plan for avoidance, preservation in place, or barring both, mitigation of project-related impacts to tribal cultural resources, the NAHC recommends the following actions:

1. Contact the appropriate regional California Historical Research Information System (CHRIS) Center (http://ohp.parks.ca.gov/?page_id=1068) for an archaeological records search. The records search will determine:
 - a. If part or all of the APE has been previously surveyed for cultural resources.
 - b. If any known cultural resources have already been recorded on or adjacent to the APE.
 - c. If the probability is low, moderate, or high that cultural resources are located in the APE.
 - d. If a survey is required to determine whether previously unrecorded cultural resources are present.
2. If an archaeological inventory survey is required, the final stage is the preparation of a professional report detailing the findings and recommendations of the records search and field survey.
 - a. The final report containing site forms, site significance, and mitigation measures should be submitted immediately to the planning department. All information regarding site locations, Native American human remains, and associated funerary objects should be in a separate confidential addendum and not be made available for public disclosure.
 - b. The final written report should be submitted within 3 months after work has been completed to the appropriate regional CHRIS center.

- 3.** Contact the NAHC for:
- a.** A Sacred Lands File search. Remember that tribes do not always record their sacred sites in the Sacred Lands File, nor are they required to do so. A Sacred Lands File search is not a substitute for consultation with tribes that are traditionally and culturally affiliated with the geographic area of the project's APE.
 - b.** A Native American Tribal Consultation List of appropriate tribes for consultation concerning the project site and to assist in planning for avoidance, preservation in place, or, failing both, mitigation measures.
- 4.** Remember that the lack of surface evidence of archaeological resources (including tribal cultural resources) does not preclude their subsurface existence.
- a.** Lead agencies should include in their mitigation and monitoring reporting program plan provisions for the identification and evaluation of inadvertently discovered archaeological resources per Cal. Code Regs., tit. 14, § 15064.5(f) (CEQA Guidelines § 15064.5(f)). In areas of identified archaeological sensitivity, a certified archaeologist and a culturally affiliated Native American with knowledge of cultural resources should monitor all ground-disturbing activities.
 - b.** Lead agencies should include in their mitigation and monitoring reporting program plans provisions for the disposition of recovered cultural items that are not burial associated in consultation with culturally affiliated Native Americans.
 - c.** Lead agencies should include in their mitigation and monitoring reporting program plans provisions for the treatment and disposition of inadvertently discovered Native American human remains. Health and Safety Code § 7050.5, Public Resources Code § 5097.98, and Cal. Code Regs., tit. 14, § 15064.5, subdivisions (d) and (e) (CEQA Guidelines § 15064.5, subds. (d) and (e)) address the processes to be followed in the event of an inadvertent discovery of any Native American human remains and associated grave goods in a location other than a dedicated cemetery.

If you have any questions or need additional information, please contact me at my email address: Nancy.Gonzalez-Lopez@nahc.ca.gov.

Sincerely,

Nancy Gonzalez-Lopez
Cultural Resources Analyst

SUBJECT: Notice Of Preparation Of An Environmental Impact Report For The San Jose City College Facilities Master Plan

The County of Santa Clara Roads and Airports Department in conjunction to the County of Santa Clara Facilities and Fleet Department (collectively known as “The County”) appreciates the opportunity to review the Notice Of Preparation Of An Environmental Impact Report For The San Jose City College Facilities Master, and is submitting the following comments:

THE COUNTY OF SANTA CLARA ROADS AND AIRPORTS DEPARTMENT

- The County suggests that this project consult the Bascom Complete Street Project. This is a planning effort in partnership between VTA and its Member Agencies to transform select roadways into high-quality, multimodal streets that prioritize bicycle, pedestrian and transit travel while still serving motorists. The Bascom Corridor Complete Streets Study is a joint project with the City of San Jose, City of Campbell, and the County of Santa Clara.
The purpose of this planning study is to identify opportunities along Bascom Avenue to demonstrate and advance Complete Streets improvements. The study will evaluate transit travel times, signal coordination, signal timing modifications, multimodal access, safety, and connectivity.
The project detail and report can be found here: <https://www.vta.org/projects/bascom-corridor-complete-streets-study>
- This project should account for and accommodate the Bascom Complete Streets corridor improvements that are found in the study Chapter 4 pages 118-127. Referenced below:
 - **PROPOSED DESIGN CONCEPT**
 - The roadway is re-purposed to provide two 10-foot-wide travel lanes and an 11 foot-wide lane to accommodate buses in each direction, supported by an 18 foot-wide center turn lane. Existing on-street parking on both sides of the street will be re-purposed as new Class-IV bicycle facilities with protective bollards that shield

cyclists from high-speed vehicle traffic. This new bicycle network connects with other planned facilities in the area, such as those on Enborg Lane, Renova Drive, Moorpark Avenue, and Parkmoor Avenue, and provides much needed bike connectivity for students and staff at San Jose City College.

All transit stops are moved to the far side of intersections and improved with bus shelters and other supportive amenities, including seating, signage, and real-time travel updates.

- Existing signal times will also be improved to synchronize with vehicle traffic. A new pedestrian signal is added at the mid-block crossing near Santa Clara Valley Medical Center. Sidewalk gaps approaching Enborg lane will be filled in to create continuous pedestrian infrastructure throughout the corridor segment.
 - All existing crosswalks are improved with enhanced striping and directional ramps for ADA accessibility, improving safety for all crossing pedestrians, especially vulnerable individuals accessing nearby medical facilities. Based on community input, a new crosswalk is added at Enborg Lane to improve connectivity in the area. Pedestrian safety comfort at Moorpark intersection is enhanced by redesigning the intersection without the porkchop islands. Gateway signage is introduced at Enborg Lane, Moorpark Avenue, and Parkmoor Avenue to celebrate the regional destinations in the area.
-
- **SHORT-TERM IMPROVEMENTS**
 - All three travel lanes are retained and reduced in width. The existing center turn lane is also retained to allow for left-turn entries into key destinations. New 10 foot-wide protected bicycle lanes are added on either side of the roadway and are supported by bollards.
 - Sidewalks on either side of the street are made continuous and landscaped with new street trees. All existing crosswalks are improved with enhanced striping. A green-striped mixing zone is implemented at transit stop to alert drivers of the presence of bicyclists, helping to reduce the potential for conflict between travel modes.
-
- **LONG-TERM IMPROVEMENTS**
 - The center turn lane is converted into an 18 foot-wide median landscaped with a continuous row of street trees. Left turn pockets are provided at key destinations and intersections, which also preserves emergency vehicle access to the Santa Clara Valley Medical Center.
 - At bus stops, curb bulbouts extend into the 10-foot bicycle lanes to improve safety for on-loading and offloading passengers. This arrangement causes the bicycle lanes to jog right of these bulbouts away from the roadway, minimizing the potential for conflict between different travel modes. In areas where the sidewalk is constrained, sidewalks are widened by extending into the landscaped areas along adjacent properties.
 - Sidewalks are lined with pedestrian oriented streetlights to improve safety. Curb

bulbouts on cross streets are introduced to reduce vehicle turning speeds, beautify the streetscape and improve storm water management. These bulbouts also improve pedestrian safety by reducing crossing distances at all intersections.

- Regarding all the proposed uses for the proposed project, would generate traffic to and from the project site as well as construction traffic during project construction.

The EIR will evaluate the potential for development under the proposed SJCC FMP to conflict with programs, plans, ordinances, and policies addressing the circulation system, including transit, roadway, bicycle, and pedestrian facilities. The expected increase in vehicle trips under the SJCC FMP discussed in the Initial Study would in turn increase the total amount of vehicle miles traveled (VMT) to and from the campus. We recommend that Bascom, Moorpark, and other County facilities near the project are included in the EIR to evaluate and identify transportation impacts and mitigation measures.

- Please provide site circulation map to show drop-off/pick-up locations around campus perimeter.

THE COUNTY OF SANTA CLARA FACILITIES AND FLEET DEPARTMENT

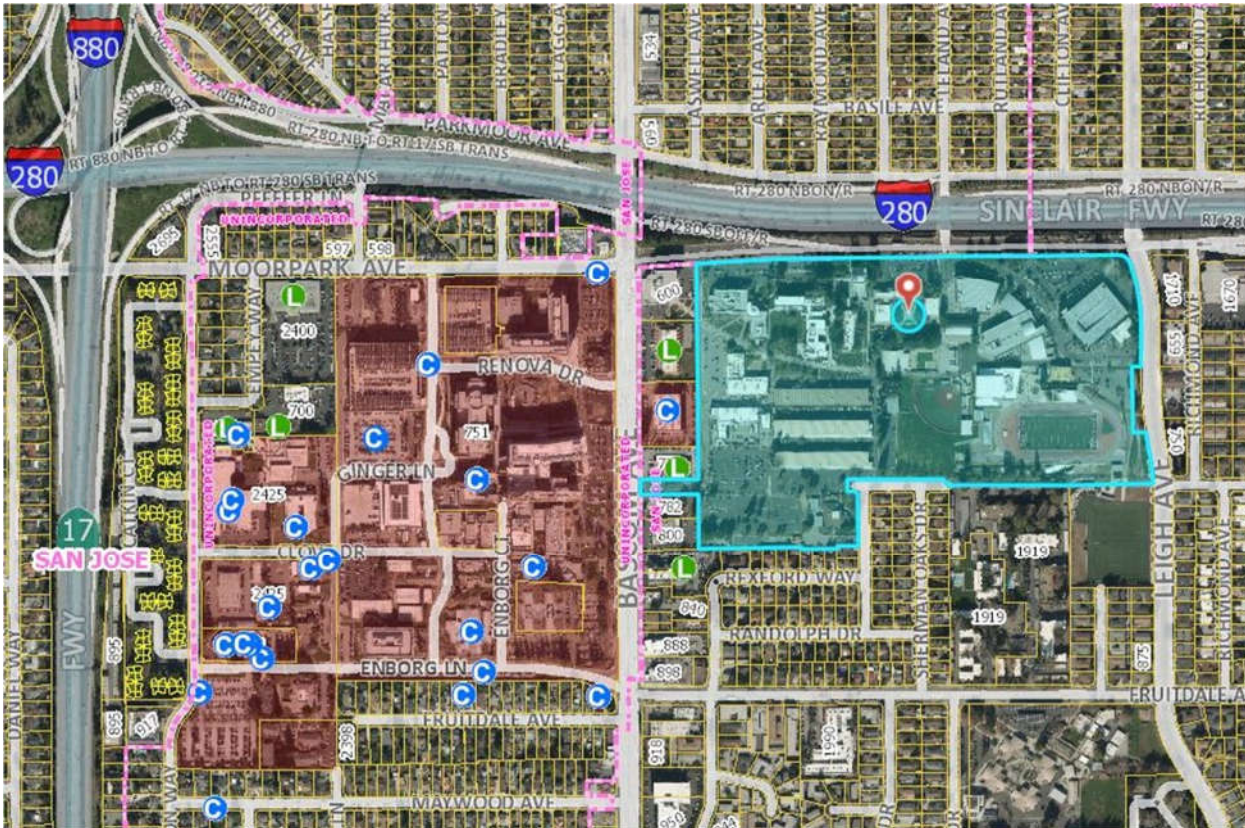

As mentioned in the NOP (pages 1, 3, and 17), the Santa Clara Valley Medical Center is adjacent to the project site. The Valley Medical Center is a County of Santa Clara owned medical campus. Services that this medical campus currently offers or has the capacity to offer in the future include ambulatory care, urgent care, emergency medical care, and specialty medical care, including Covid-19 treatment and care. In addition to the Valley Medical Center campus, the County has leased 3 buildings for health and hospital-related operations in the vicinity of the project site. The addresses of the County Facilities (Owned and Leased) in addition to the ones on VMC Campus are listed (Table 1) and a map depicting their proximity to the project site are below (Figure 1):

Table 1: Location of County Facilities Adjacent to Project Site

*Note: Does not include facilities on the Valley Medical Center Campus

Address	County Owned/ Leased Facility
650 S. Bascom Avenue, San Jose 95128	Leased
828 S. Bascom Avenue, San Jose 95128	Leased
770 S. Bascom Avenue, San Jose 95128	Leased
2400 Moorpark Avenue San Jose 95128	Leased
700 Empey Way Suite 110 San Jose 95128	Leased
720 Empey Way San Jose 95128	Leased
750 S. Bascom Avenue, San Jose 95128	Owned
2215 Fruitdale Avenue San Jose 95128	Owned
900 Thornton Way San Jose 95128	Owned
2220 Moorpark Avenue San Jose 95128	Owned
730 Empey Way San Jose 95128	Owned
2400 Enborg Lane San Jose 95128	Owned
2300 Enborg Lane San Jose 95128	Owned

Figure 2: Location of County Facilities with respect to the Project Site

Legend:

Blue: Proposed Project Site

Red: VMC Campus

L: County-Leased Facilities

C: County Owned Facilities

The County respectfully requests the San Jose Evergreen Community College to consider the following impacts to the Valley Medical Center in its San Jose City College Facilities Master Plan and related EIR.

Air Quality:

As stated on page 23 of the SJCC FMP Initial Study, the construction and development activities at the San Jose City College campus could expose sensitive receptors in the adjacent neighborhoods to substantial pollutant concentrations. The County Facilities listed in Table 1 and depicted in Figure 1 provide medical services to at-risk populations and others with serious health conditions. Therefore, the EIR should treat the County Facilities as sensitive receptors in the air quality impact analysis. The EIR should also evaluate all potential mitigation measures and project alternatives that could avoid or mitigate impacts to these sensitive receptors to less than significant levels.

Transportation:

- The County Facilities are accessible from Bascom Avenue, Moorpark Avenue, Parkmoor Avenue, and Fruitdale Avenue (Verify).
- As described on page 67, The proposed implementation of the SJCC FMP includes renovation and demolition activities. All the proposed activities for the project would generate traffic to and from the project site as well as construction traffic during project construction. The EIR should thoroughly evaluate all potential accessibility impacts to individuals using or serving the County Facilities such as emergency responders, employees, and patients. This analysis should include, but not be limited to, impacts on vehicular access, pedestrian access, and public transit operations.

Public Services:

- The EIR should analyze whether the project would result in additional demand for public services to the extent that existing facilities would need to be expanded or new facilities would need to be constructed. For example, if the project would result in additional traffic to the extent that that transportation/circulation system in the project vicinity would need to be modified or expanded.

Noise:

- As listed in page 60 of the SJCC FMP Initial Study, the proposed project would include construction and operation of education-related uses. Expanding the capacity of existing education uses within the SJCC campus may generate noise and vibration that could adversely affect nearby sensitive receptors. Construction-related noise could also affect sensitive receptors. As previously explained, the County Facilities are sensitive receptors. Thus, the EIR should evaluate the potential noise impacts to the County Facilities. The EIR should also evaluate all potential mitigation measures and project alternatives that could avoid or mitigate impacts to these sensitive receptors to less than significant levels.

Thank you for considering these comments. If you have any questions or concerns about these comments, please contact me at 408/573-2482 or Ellen.Talbo@rda.sccgov.org

Thank you,

Ellen Talbo,
County Transportation Planner
County Roads and Airports Department

Subject: NOP for SJCC Facilities Master Plan

[ALERT FROM ITSS: This message was sent from outside SJECCD's email. Do NOT respond to requests for personal information or passwords. Think twice before clicking on a link or opening an attachment.]

Terrance,

Valley Water has reviewed the NOP for the SJCC Facilities Master Plan and have the following comments for consideration in preparation of the DEIR:

1. Valley Water records indicate two wells located on APN: 282-43-016. To protect groundwater quality and in accordance with Valley Water Ordinance 90-1, all existing wells affected by new or redevelopment need to be identified and properly registered with the Valley Water and either be maintained or destroyed in accordance with Valley Water's standards. Destruction of any well and the construction of any new wells proposed, including monitoring wells, requires a permit from Valley Water prior to construction. Property owners or their representative should contact the Valley Water Wells and Water Measurement Unit at (408) 630-2660, for more information.
2. The DEIR should include a Water Supply Assessment (WSA) if the proposed development meets the threshold for completion of a WSA.
3. Consideration should be given measures that reduce reduce/avoid adverse impacts to water supply such as:
 - Requiring landscaping meet or exceed the requirements of the City's water efficient landscape regulations.
 - The installation of dual plumbing to facilitate and maximize the use of alternative water sources for irrigation, toilet flushing, cooling towers, and other non-potable water uses. Onsite reuse of water may be appropriate now or in the future.
 - Maximizing the use of alternative water sources for non-potable uses including stormwater, rainwater, and graywater.

When the DEIR is available for public review please forward a copy to us for our review.

thanks

SUBJECT: Notice of Preparation of An Environmental Impact Report For The San Jose City College Facilities Master Plan

The County of Santa Clara Roads and Airports Department (The County) appreciates the opportunity to review the Notice of Preparation Of An Environmental Impact Report For The San Jose City College Facilities Master, and is submitting the following comments:

- If there are impacts to County facilities, the County would ask the project to modify or to contribute fair share to Bascom/Fruitdale to 8-phase operation.
- In addition to the proposed elements of the transportation section for CEQA, the County would like the two projects to consider preparing the Local Transportation Analysis (LTA) using Level-of-Service methodology at intersections where project trips are added to the existing traffic.
- The SJCC LTA to include neighborhood traffic issues in the area such as:
 - Speeding and cut-through traffic along MacArthur Ave and Leland Ave
 - Speeding and parking concerns along Laswell Ave
 - Existing operation for signalized intersection at Moorpark/Leland/Parkmoor and recommendations for improvements.
 - This project should account for and accommodate the Bascom Complete Street project corridor improvements (Chapter 4 pages 118-127) indicated in the previous initial comment already sent.

If you have any questions or concerns about these comments, please contact me at 408-573-2462 or ben.aghegnehu@rda.sccgov.org

Thank you.
